# 1 Introduction

## 1.1 Overview

The distributed nature of an AUTOSAR ECU development requires an optimized capturing of information. In particular, diagnostic information (i.e. DEM and DCM configuration) shall be captured only once by the person with the best knowledge and therefore being able to take responsibility better than one centralized individual.

In the configuration approach before the advent of the [DiagnosticExtract](#), the Basic Software Modules DCM and DEM are entirely configured centrally. During integration, all SW-Cs above the RTE [1] (Application Software) introduce ports to be connected to the BSW modules [2]. Additionally, SW-Cs express needs which shall be fulfilled by the BSW.

The market shows a high demand for transferring diagnostic demands of the OEM-specific configuration process to their tier-1 suppliers.

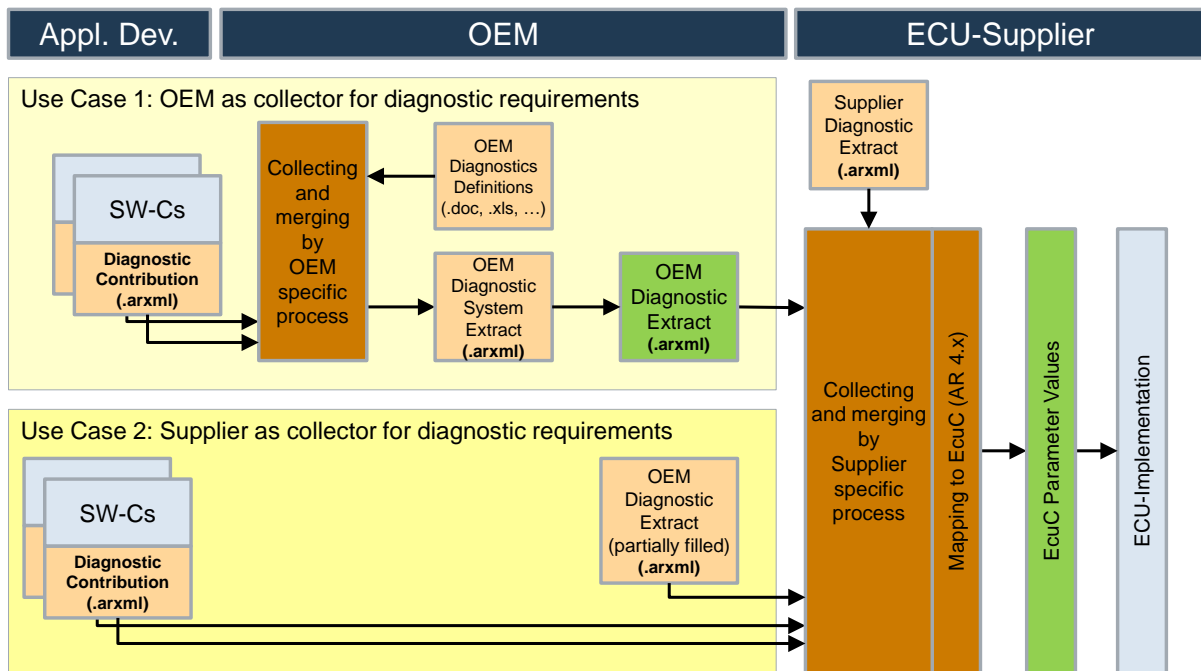

In the past, due to the absence of integral options, many file formats like ODX or EcuC [3] are often used. But neither ODX nor EcuC is well suited to transfer this information.

For example, ODX [4] lacks in fault memory details and EcuC (which was never designed for becoming the vehicle for data exchange between different organizations) has a very generic nature that renders the enforcement of a strict model formalization very difficult.

On top of that, the integration of EcuC definitions into an existing configuration (especially the PDUs) cannot be fully automated.

Therefore, the obvious solution approach has been to define a new standardized AUTOSAR exchange format on diagnostic functionality that can be used similar to a System Description, formalized as an ARXML [5] file.

In this spirit, the configuration of diagnostic functionality becomes similar to the configuration of the communication part within the System Description [6].

**Figure 1.1: Scope of this document in the ECU Development work-flow**

Figure 1.1 shows the configuration process of diagnostics for two generalized use cases. This process involves three parties:

- **OEM** or diagnostic requester
- **Application Developer** or Application Developer
- **ECU-Supplier** or integrator

The specific role of these contributors to the diagnostic extract is in detail explained in the following sub-chapters.

### 1.1.1 OEM

The **OEM** or requester of diagnostic data uses the [DiagnosticExtract](#) to define the diagnostic interfaces of one or multiple ECUs. It may also define some [InternalBehaviors](#) as requirements for the **ECU-Supplier** or **Application Developer**

- Defines the values of the DTCs
- Defines the UDS services and sub-services supported by the ECUs
- Defines the required events needed by a specific composition implemented by an **Application Developer**

**NOTE:** This list represents an example; this document does not define a specific ownership of each element.

In the first use case, the `DiagnosticExtract` is used to exchange information which is transformed into the EcuC configuration (M2 to M1 mapping, see also [3] and [7]).

Second, the **OEM** uses the `DiagnosticExtract` to document requirements to be implemented by a supplier. These requirements are expressed in textual language and can not be mapped directly to any EcuC configuration parameters (no M2 to M1 mapping possible).

### 1.1.2 Application Developer

The Application Developers implement their **software-components** with the corresponding **software-component description**. The role “Application Developer” can be assumed by both an OEM and a supplier. In other words, both OEM and supplier may contribute application software to a given ECU.

With the introduction of this concept, the Application Developer has the possibility to provide diagnostic information relevant to the software-components as part of the `DiagnosticExtract`.

The Application Developer may also receive some input as requirement from the **OEM** within the `DiagnosticExtract` in textual form as for example:

- Definition of the content of a specific `ReadDataByIdentifier` implemented by this software-component
- Definition of the events needed for this software-component

**NOTE:** Only as example, this document does not define a specific ownership of each element.

In the first use case, the Application Developer defines the parameters of a specific `ReadDataByIdentifier`, i.e. the content of the diagnostic request but not the DID itself. The DID of this command will usually be defined by the **OEM**.

Secondly, the software-component events including information like `Debouncing` and `OperationCycle` may be defined by the **Application Developer**. The **Application Developer** may also define events and diagnostic jobs which are not needed by a specific **OEM** but for another one.

Suppliers may use the same software for multiple **OEMs** and need to reuse it. This implies that some `DiagnosticExtract` information coming from a software-component may be ignored during the integration if not needed for a specific project.

### 1.1.3 ECU-Supplier

The **ECU-Supplier** or integrator receives one or several `DiagnosticExtract` files from the **OEM** and from multiple **Application Developers**. The main goal of the **In-**

**tegrator** is to integrate all delivered [DiagnosticExtract](#) and to generate the EcuC configuration from it.

Since this concept does not define a specific ownership for each element like DIDs, parameters of a UDS service, Events, Sessions, etc. the integrator has to ensure that the complete information is still valid after merging it.

- Mapping of DTCs to Events
- Merge of Events
- Mapping of services

Some DTCs may already be mapped to events - especially in cases where both come from the same party. But if the DTCs are defined by the **OEM** and the SW implemented by other supplier acting as an **Application Developer** the integrator has to ensure that both are mapped together.

In some cases, an Event may be defined multiple times. An **OEM** defines the Events which shall be implemented by an **Application Developer**. A Supplier implements a software-component which will be used in multiple projects and which also detects this type of error and also defines this same event.

Both events may have different naming but the same meaning. The integrator has to detect this redundancy during the integration and merge them together.

In another case, the **OEM** requires a specific `ReadDataByIdentifier` and an **Application Developer** implements it. If the implementation is performed for one specific project only, the **Application Developer** may map the DID from the **OEM** to the already defined job in their software-component.

In other cases in which the **Application Developer** implements a generic diagnostic job, it will be a task of the **ECU-Supplier** to merge this information and to map the jobs to the corresponding DID.

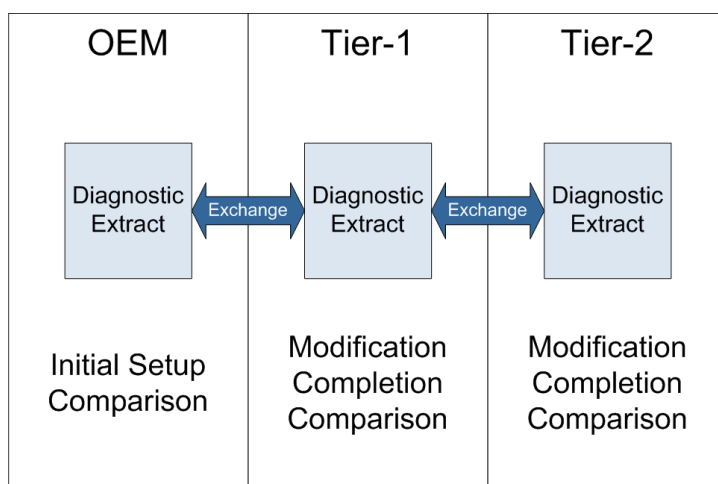

#### 1.1.4 Exchanging of Files

During an ECU development project, the three main roles (OEM, Application Developer, ECU Integrator) exchange [DiagnosticExtract](#) files. The timing and frequency of exchanges and the content in each of these exchanged files is highly dependent on the individual project setup and situation.

Therefore, the [DiagnosticExtract](#) format has been designed to allow for gradual enrichment of definitions contributed at largely arbitrary points in time by the different roles in order to meet the needs of “Decentralized Configuration”.

For any exchange path between any two roles, the same file format based on the [DiagnosticExtract](#) template is used. It is then up to a company specific process and tooling to merge the collected [DiagnosticExtract](#) files while resolving conflicts (contradictions, redundancies etc.).

As final result, a consistent and complete `DiagnosticExtract` file is available which is input to derivation of the configuration for the diagnostic modules of the Basic Software.

**Figure 1.2: Exchange of diagnostic configuration between OEM, Tier-1, and Tier-2**

Even after the `DiagnosticExtract` has been fully integrated and is ready to go for deriving the configuration of the diagnostic stack on EcuC level it is still foreseen to feed it back to e.g. an OEM.

In this case the OEM has the ability to review the configuration of the diagnostic stack on the level of the diagnostic extract.

At some point, this information may also be taken to (directly or via indirection of other formats) create a configuration of a diagnostic client.

### 1.1.5 Relationship to software-component Service Needs

Before the introduction of the Diagnostic Extract, Service Needs were used to describe diagnostic requirements on software-component level. These configuration requirements are referenced to the related BSW module DCM or DEM in order to provide the corresponding configuration on BSW level.

The usage of Service Needs is only possible on Atomic software-component level whereas the assignment of diagnostic demands must be possible on Composition level.

The software-component Service Needs within the software-component Description are still to be used along with the `DiagnosticExtract` in order to annotate the software-component ports which are relevant for further mapping and handling as defined by the `DiagnosticExtract`.

From software-component Developer's perspective, the `DiagnosticExtract` is therefore used partially as substitution and partially as extension of the software-

component Service Needs. The reasoning for “substitution” is the avoidance of redundant diagnostic definitions.

Since some diagnostic properties potentially definable by software-component Developers are not covered in software-component Service Needs, the `DiagnosticExtract` can also be viewed as “extension” to the original purpose of software-component Service Needs.

### 1.1.6 Recommendation and Hints

Multiple parties may have different understanding of which parts shall be provided by each one. There is no defined rule to indicate who is responsible for each part. At the end, it is the **ECU-Supplier** in his role as integrator who has to ensure that all mappings are done and that the ECU runs as expected by the **OEM**.

In case the **OEM** does not have his own diagnostic requirements, the **ECU-Supplier** has to provide the complete `DiagnosticExtract`. In this case, the **OEM** may only receive the `DiagnosticExtract` as part of the delivery. The process itself how the parties work with this format is not defined within this specification.

Figure 1.1 shows a recommended way how to handle the `DiagnosticExtract` between the different parties. In use case 1, some software-components are implemented by the **OEM** (or by a Supplier of the OEM) and the first merging of `DiagnosticExtract` data occurs at the **OEM**.

In use case 2, the **OEM** provides the diagnostic requirements via `DiagnosticExtract` and multiple **Application Developer** provide information related to their implementation, the merging is performed completely by the **ECU-Supplier**.

Also, a combination of use cases 1 and 2 is allowed. Also, the **ECU-Supplier** may implement some part of the SW inclusive their corresponding `DiagnosticExtract`.

### 1.1.7 Limitations

This first release of the `DiagnosticExtract` template focuses on defining diagnostic requirements a single ECU only. That means that currently, distributed diagnostic functionality for a system or partial system consisting of multiple ECUs cannot be defined using the `DiagnosticExtract` template.

In future releases, the `DiagnosticExtract` template is expected to be extended to also cover configuration of distributed diagnostic functionality. Similar to the description of communication dependencies in the System Description, it shall be possible to describe diagnostic demands on system level to derive the diagnostic demands for a specific ECU from this description.

In general, the `DiagnosticExtract` does not support process-related parts to document the maturity of diagnostic configuration data. This means, that a data object

cannot be marked as “draft” or “released”. This issue needs to be solved by AUTOSAR within a general concept in a future release. Therefore, it does not make sense to introduce a solution for diagnostics only.

## 1.2 Scope

This document describes the formal description of contributions to the diagnostic configuration.

On the level of meta-modeling, the content described in this document conceptually relates to the definition of [SwcServiceDependency](#) or [BswServiceDependency](#), as defined by the [Software Component Template \[8\]](#) or [Basic Software ModuleDescription Template \[9\]](#).

Further relations exist to the specification of communication in AUTOSAR systems as described by the [System Template \[6\]](#).

Further relations exist to the specification of the [Diagnostic Communication Manager \[10\]](#) as well as to the [Diagnostic Event Manager \[11\]](#).

The relation of the [DiagnosticExtract](#) to the rest of the AUTOSAR meta-model is sketched in [Figure 1.3](#).

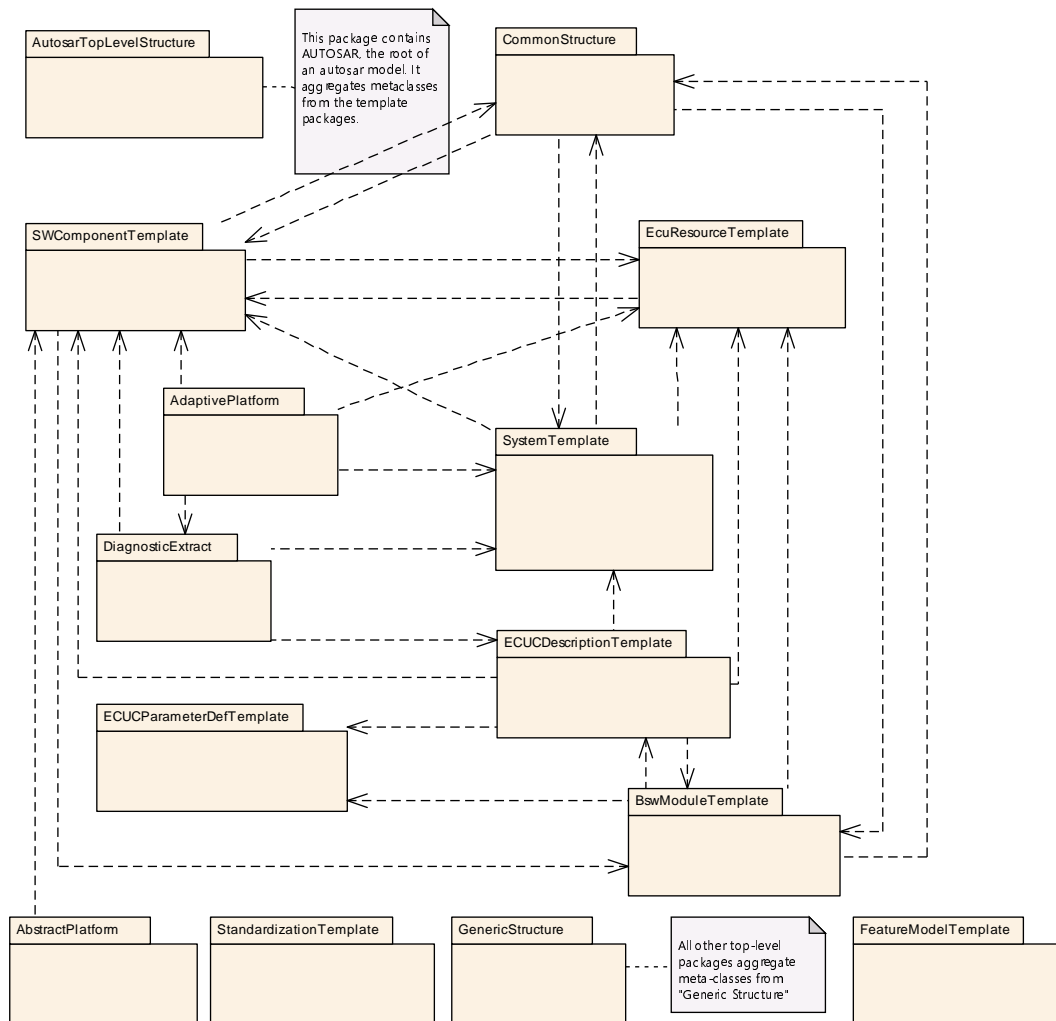

Figure 1.3: The relation of the **DiagnosticExtract** to the rest of the AUTOSAR meta-model

### 1.3 Binding Times of Constraints

Constraints in this document have different *actual* binding times depending on the platform that utilizes a **DiagnosticExtract**. On the *AUTOSAR classic platform*, the binding time is defined as the **time when the Ecu configuration of the diagnostic stack is created**.

For the *AUTOSAR adaptive platform*, the binding time is identified as the **time when the creation of manifest content is completed**.

It would be very cumbersome to list the two binding times for the different platforms in each constraint separately. Therefore, whenever a constraint is equally applicable to both the *AUTOSAR adaptive platform* and the *AUTOSAR classic platform* the generic phrase **“at the time when the DEXT is complete”** is used.

## 1.4 Abbreviations

The following table contains a list of abbreviations used in the scope of this document along with the spelled-out meaning of each of the abbreviations.

<i>Abbreviation</i>	<i>meaning</i>
API	Application Programming Interface
BSW	Basic Software
BswM	Basic Software Manager
CAN	Controller Area Network
CSE	Codes for Scaling Units
DEM	Diagnostics Communication Manager
DCY	Driving Cycle
DEM	Diagnostics Event Manager
DID	Diagnostic Identifier
DTC	Diagnostic Trouble Code
DTR	Diagnostic Test Result
DoIP	Diagnostics over IP
ECU	Electrical Control Unit
ECUC	ECU Configuration
FID	Function Identifier
FIM	Function Inhibition Manager
GID	Group Identifier
ID	Identifier
IO	Input/Output
IP	Internet Protocol
IUMPR	In-Use Monitor Performance Ratio
ISO	International Organization for Standardization
LIN	Local Interconnect Network
NRC	Negative Response Code
OBD	On-Board Diagnostic
ODX	Open Diagnostic Data Exchange
OEM	Original Equipment Manufacturer
PDU	Protocol Data Unit
PID	Parameter Identifier
PTO	Power Take Off
RA	Routing Activation
RAM	Random Access Memory
RID	Routine Identifier
ROE	Response on Event
ROM	Read-Only Memory
RTE	Run-Time Environment
RS	Requirements Specification
RX	Receive
SPN	Suspect Parameter Number
SW	Software

<i>Abbreviation</i>	<i>meaning</i>
SWC	Software Component
SWCD	Software Component Description
TID	Test Identifier
TPS	Template Specification
TX	Transmit
SWS	Software Specification
UDS	Unified Diagnostic Services
UML	Unified Modeling Language
VFB	Virtual Functional Bus
VIN	Vehicle Identification Number
WWH-OBD	World-Wide Harmonized On-Board Diagnostics
XML	Extensible Markup Language
XSD	XML Schema Definition

**Table 1.1: Abbreviations used in the scope of this Document**

## 1.5 Document Conventions

Technical terms are typeset in mono spaced font, e.g. `PortPrototype`. As a general rule, plural forms of technical terms are created by adding "s" to the singular form, e.g. `PortPrototypes`. By this means the document resembles terminology used in the AUTOSAR XML Schema.

This document contains constraints in textual form that are distinguished from the rest of the text by a unique numerical constraint ID, a headline, and the actual constraint text starting after the `[` character and terminated by the `]` character.

The purpose of these constraints is to literally constrain the interpretation of the AUTOSAR meta-model such that it is possible to detect violations of the standardized behavior implemented in an instance of the meta-model (i.e. on M1 level).

Makers of AUTOSAR tools are encouraged to add the numerical ID of a constraint that corresponds to an M1 modeling issue as part of the diagnostic message issued by the tool.

The attributes of the classes introduced in this document are listed in form of class tables. They have the form shown in the example of the top-level element AUTOSAR:

Please note that constraints are not supposed to be enforceable at any given time in an AUTOSAR workflow. During the development of a model, constraints may legitimately be violated because an incomplete model will obviously show inconsistencies.

However, at specific points in the workflow, constraints shall be enforced as a safeguard against misconfiguration.

The points in the workflow where constraints shall be enforced, sometimes also known as the "binding time" of the constraint, are different for each model category, e.g. on the

classic platform, the constraints defined for software-components are typically enforced prior to the generation of the RTE while the constraints against the definition of an Ecu extract shall be applied when the Ecu configuration for the Com stack is created.

For each document, possible binding times of constraints are defined and the binding times are typically mentioned in the constraint themselves to give a proper orientation for implementers of AUTOSAR authoring tools.

<b>Class</b>	<b>AUTOSAR</b>			
<b>Package</b>	M2::AUTOSARTemplates::AutosarTopLevelStructure			
<b>Note</b>	Root element of an AUTOSAR description, also the root element in corresponding XML documents. <b>Tags:</b> xml.globalElement=true			
<b>Base</b>	ARObject			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
adminData	AdminData	0..1	aggr	This represents the administrative data of an Autosar file. <b>Tags:</b> xml.sequenceOffset=10
arPackage	<a href="#">ARPackage</a>	*	aggr	This is the top level package in an AUTOSAR model. <b>Stereotypes:</b> atpSplittable; atpVariation <b>Tags:</b> atp.Splitkey=arPackage.shortName, arPackage.variationPoint.shortLabel vh.latestBindingTime=blueprintDerivationTime xml.sequenceOffset=30
fileInfoComment	FileInfoComment	0..1	aggr	This represents a possibility to provide a structured comment in an AUTOSAR file. <b>Stereotypes:</b> atpStructuredComment <b>Tags:</b> xml.roleElement=true xml.sequenceOffset=-10 xml.typeElement=false
introduction	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents an introduction on the Autosar file. It is intended for example to represent disclaimers and legal notes. <b>Tags:</b> xml.sequenceOffset=20

**Table 1.2: AUTOSAR**

The first rows in the table have the following meaning:

**Class:** The name of the class as defined in the UML model.

**Package:** The UML package the class is defined in. This is only listed to help locating the class in the overall meta model.

**Note:** The comment the modeler gave for the class (class note). Stereotypes and UML tags of the class are also denoted here.

**Base Classes:** If applicable, the list of direct base classes.

The headers in the table have the following meaning:

**Attribute:** The name of an attribute of the class. Note that AUTOSAR does not distinguish between class attributes and owned association ends.

**Type:** The type of an attribute of the class.

**Mul.:** The assigned multiplicity of the attribute, i.e. how many instances of the given data type are associated with the attribute.

**Kind:** Specifies, whether the attribute is aggregated in the class (`aggr` aggregation), an UML attribute in the class (`attr` primitive attribute), or just referenced by it (`ref` reference). Instance references are also indicated (`iref` instance reference) in this field.

**Note:** The comment the modeler gave for the class attribute (role note). Stereotypes and UML tags of the class are also denoted here.

Please note that the chapters that start with a letter instead of a numerical value represent the appendix of the document. The purpose of the appendix is to support the explanation of certain aspects of the document and does not represent binding conventions of the standard. The verbal forms for the expression of obligation specified in [TPS\_STDT\_00053] shall be used to indicate requirements, see Standardization Template, chapter Support for Traceability ([12]).

The representation of requirements in AUTOSAR documents follows the table specified in [TPS\_STDT\_00078], see Standardization Template, chapter Support for Traceability ([12]).

## 1.6 Requirements Tracing

The following table references the requirements specified in [13] and links to the fulfillment of these.

Requirement	Description	Satisfied by
[RS_DEXT_00001]	Diagnostic data exchange	[TPS_DEXT_01003] [TPS_DEXT_01004] [TPS_DEXT_01005] [TPS_DEXT_01007] [TPS_DEXT_01008] [TPS_DEXT_01014] [TPS_DEXT_01019] [TPS_DEXT_01020] [TPS_DEXT_01022] [TPS_DEXT_01023] [TPS_DEXT_01024] [TPS_DEXT_01025] [TPS_DEXT_01026] [TPS_DEXT_01027] [TPS_DEXT_01028] [TPS_DEXT_01029] [TPS_DEXT_01038] [TPS_DEXT_01046] [TPS_DEXT_01047] [TPS_DEXT_01055] [TPS_DEXT_01056] [TPS_DEXT_01057] [TPS_DEXT_01060] [TPS_DEXT_01066] [TPS_DEXT_01069] [TPS_DEXT_01075]

**Table 1.3: RequirementsTracing**

## 2 Use Cases

### 2.1 Use cases for diagnostic data exchange

The basic usage of the `DiagnosticExtract` is the exchange of diagnostic data between the different parties involved in the diagnostic development process to allow the configuration of the DCM and the DEM and to provide the description of corresponding application interfaces to implement diagnostic services and fault handling.

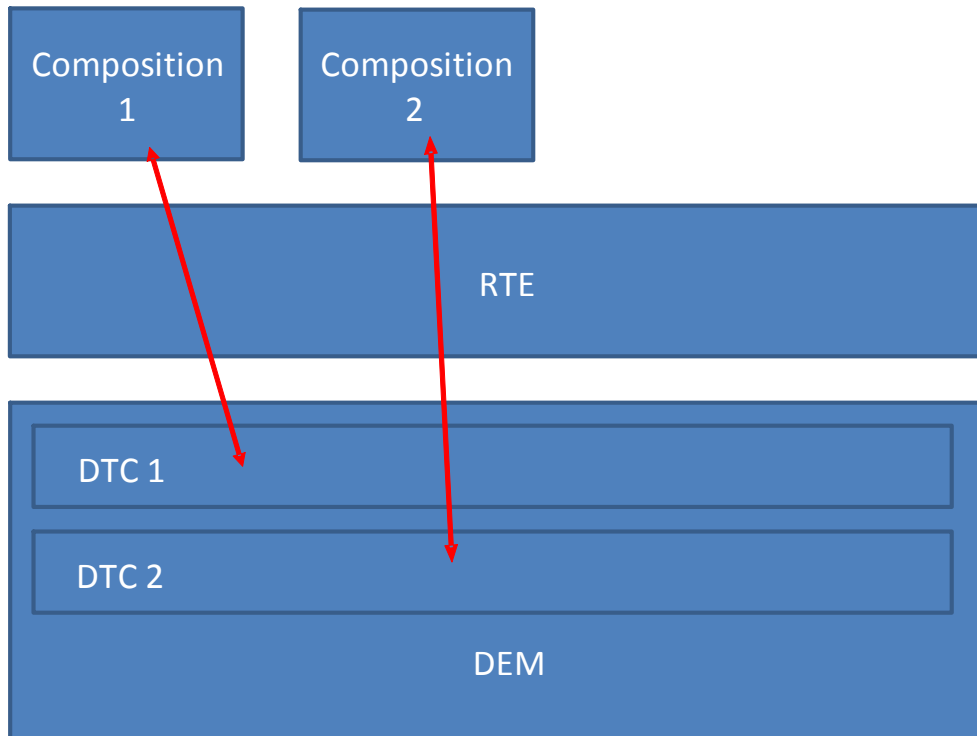

### 2.2 Configuration of DCM

The configuration of the DCM includes the setup of diagnostic services and the assignment of data objects provided by one or more software components (e.g. Composition 1, Composition 2).

**Figure 2.1: Assignment of DCM-related data objects**

## 2.3 Configuration of DEM

**Figure 2.2: Assignment of DEM-related data objects**

The configuration of the DEM includes fault memory data (DTCs and environmental data) and the assignment of corresponding data by one or more [SwComponentTypes](#) (e.g. Composition 1, Composition 2).

As already explained, the diagnostic development process is distributed among different parties. On the one hand side, the OEM needs to describe the general requirements for a diagnostic system that have to be implemented by an ECU:

1. Depending on the diagnostic system, the OEM can provide a completely or partly-filled [DiagnosticExtract](#) including the description of [PortInterfaces](#):
  - Integrator/SWC developer (OEM or Tier 1) is responsible for the completion (detailing of predefined diagnostic content).
  - Integrator/SWC developer (OEM or Tier 1) is responsible for the specific configuration of diagnostic content defined by himself.
  - New integration of updated Diagnostic descriptions by integrator.
2. Return of completely or partly-filled [DiagnosticExtract](#) to OEM for:
  - Documentation

- ECU testing
- Integration reviews
- Failure correction

Use case examples:

- Configuration of UDS service 0x22 (`ReadDataByIdentifier`)
- Configuration of UDS service 0x2E (`WriteDataByIdentifier`)
- Configuration of UDS service 0x31 (`RoutineControl`)
- Configuration of UDS service 0x2F (`I/O-Control`)
- Configuration of DEM DTCs
- Configuration of Combined Events
- Mapping of events to DTCs
- Configuration of DTC-related environmental data
- Mapping of DEM Events to their corresponding Enable Conditions and Storage Conditions
- Configure general DCM parameters
- Description of diagnostic demands that are not relevant for code generation but have to be exchanged between OEM and Tier1 (e.g. set and reset condition for a DTC)

Refinement of use cases:

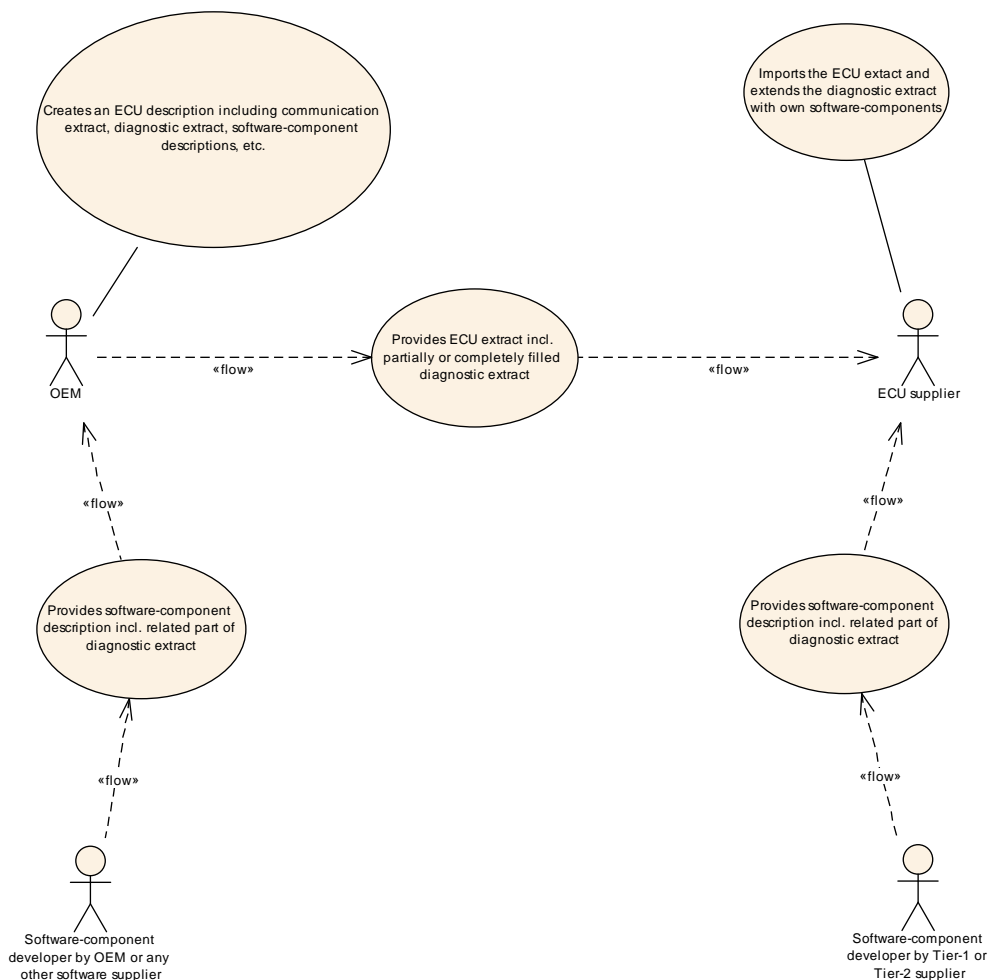

The OEM already provides a System Template for an ECU which describes the ECU Supplier SW parts as a `CompositionSwComponentType` where only inputs and outputs are known.

1. The OEM creates a `DiagnosticExtract` which describes the diagnostic interfaces of an ECU. Supported services are described (e.g. RDBI/WDBI/Routine Control) as well as their corresponding input/output parameters and return values (those which are optional in UDS standard).
2. SWC Developer at OEM or OEM SW Supplier develops SWC and also describes the Diagnostic information using `ServiceNeeds` as diagnostic contribution.
3. The OEM Diagnose Responsible for a Project creates the mappings between the `DiagnosticExtract` and the SWC available on OEM side (from 2.).
4. The OEM Diagnostic Responsible for a Project creates the mappings between the `DiagnosticExtract` and the `CompositionSwComponentTypes` which will be implemented by the ECU Supplier or SW Developer.
5. The ECU Suppliers receives the ECU Extract including `DiagnosticExtract` from the OEM and imports it to the project.

6. In the same way is in point 2., the SWC Developer on supplier or Tier 2 side describes the Diagnostic information using *ServiceNeeds* as diagnostic contribution.

In the same way as in point 3: The ECU Supplier Diagnostic Responsible creates the mapping between the *PortInterfaces* of the *DiagnosticExtract* (from 5.) and the *SwComponentTypes* as provided in 6.

For the usage of indicators, it might happen that indicators defined on BSW level in DEM might not be automatically mapped to the implementation on SWC level. This would then require a manual mapping step by the integrator to resolve the mismatch.

**Figure 2.3: Workflow scenario for diagnostic data exchange**

## 2.4 Configuration of the Fim

### 2.4.1 Model Function Inhibition

A typical use case for the Fim is the definition of “control mechanisms for software components and the functionality therein” [14]. By this means, the Fim can significantly

modify the behavior of the application software at run-time, e.g. in response to a sensor failure.

The conditions for deciding about inhibitions are derived from *diagnostic events*. If a *diagnostic event* that relates to a hardware sensor is reported as “failed” then the Fim can degrade the behavior of the application software to no longer rely on the sensor information that has become unreliable.

Consequently, the [DiagnosticExtract](#) needs to provide the basic mechanisms to create the definition of such inhibition rules that relate pieces of the application software (which are visible to the [DiagnosticExtract](#) as formally defined [SwComponentTypes](#)) to the definition of *diagnostic events*.

## 2.4.2 Model Fim configuration before Dem exists

The configuration of the Fim module and the Dem module are closely intertwined because the Fim uses the *diagnostic events* defined in the context of the Dem. This means that the Fim can only be configured if the Dem exists as a basis for creating this configuration.

Clearly, this is contradicting the approach of a “decentralized configuration” of the diagnostics stack’s behavior. It may happen that the configuration of the Fim and the configuration of the Dem by means of the [DiagnosticExtract](#) are distributed over different organizations within a concrete vehicle project.

However, the organizations would not be able to make progress independently of each other because the work product of one is the immediate prerequisite that the other organization can start working.

Therefore, one important use case for the [DiagnosticExtract](#) is the ability to configure the Fim module in the scope of the [DiagnosticExtract](#) **without the immediate need to already have access to the corresponding configuration of the Dem module.**

In other words, a typical work-flow could look like this:

1. Create the Fim configuration on the basis of a collection of alias objects that represent the *diagnostic events* that are defined in the context of the Dem module within the configuration of the Fim and **in parallel** create the Dem configuration and thereby add definitions of the actual *diagnostic events*.
2. Ship the configuration of the Dem to the organization that is responsible for the creation of the configuration of the Fim.
3. Let this organization take care of resolving the alias *diagnostic events* by way of referring from the Fim configuration to the *diagnostic events* contained in the actual Dem configuration.

## 2.5 Configuration of J1939 Diagnostics

Within the System Extract, J1939 diagnostic is configured on a service level by the diagnostic messages DM01 .. DM57, which will be handled by J1939 Dcm.

The diagnostic content which is provided by the diagnostic messages is defined within the [DiagnosticExtract](#) separately for each J1939 function, and contributes to the configuration of the J1939 Dcm as well as the parts of the Dem configuration that are relevant for J1939.

J1939 functions (known as Controller Application or CA within the SAE J1939 Standard [15]) are identified by a NAME and an address (assigned at run-time) and are represented in AUTOSAR by the [J1939NmNode](#).

### 2.5.1 Modeling of J1939 Diagnostic Aspects independent of the Deployment

The main use case for modeling the J1939 in the [DiagnosticExtract](#) is the possibility to create the diagnostic configuration relevant for a J1939 function, even if the underlying communication architecture is not (fully) defined and if no vehicle model (represented by a [System](#)) exists.

The J1939 diagnostics modeling is done during functional development before the [System](#) exists where the functions are deployed. This approach represents a case of decentralized configuration of the diagnostic stack.

### 2.5.2 J1939 Diagnostic Content modeled in the Diagnostic Extract

The diagnostic content for J1939 consists of the following topics:

**SPN** The Suspect Parameter Number is used throughout the J1939 specification to identify measured values (physical signals) and commands, the communication signals to which these are mapped, and diagnostic events caused by these.

**Signals** Communication signals that are relevant for diagnostics are specifically annotated, and reported by the J1939 diagnostics.

**DTCs** J1939 DTCs consist of an SPN, identifying the source of the diagnostic event, and an FMI (Failure Mode Indicator), identifying the problem with this source, like a boundary exception. In addition, an event counter is contained in the DTC.

**Freeze Frames** contain measured valued captured at the time a diagnostic event is reported as failed. J1939 supports two different kinds of freeze frames:

- **standardized freeze frames** (reported by DM04), which have a legislated layout
- **expanded freeze frames** (reported by DM24/DM25), which have a configurable layout

## 3 Conceptual Background

Chapter 1 has already given an overview on the intended way of using the `DiagnosticExtract` template and files. This chapter gives further background information on the overall concept behind the new format to create a better basis for understanding of the meta-model described in Chapter 4.

### 3.1 Definition of relevant Diagnostic Elements

**[TPS\_DEXT\_01046] ECU configuration is not suitable to be exchanged between partners in an ECU development project** [The ECU configuration (EcuC) parameters defined by the AUTOSAR Software Specification (SWS) documents for `Dem` and `Dcm` are not suitable to be exchanged between partners in an ECU development project.

Besides proprietary ways of using the EcuC format, the main reason for EcuC parameters being inappropriate to be exchanged is their closeness to implementation (e.g. parameter on buffer sizes).] ([RS\\_DEXT\\_00001](#))

**[TPS\_DEXT\_01047] Differences in the development processes for diagnostics at automotive OEMs and ECU suppliers** [Additionally, there are differences in the development processes for diagnostics at automotive OEMs and ECU suppliers resulting in different views on relevant diagnostic properties to be exchanged and different ways of deriving and defining them as diagnostic requirements.] ([RS\\_DEXT\\_00001](#))

Therefore, the identification of all diagnostic properties and requirements as superset from the companies' views forms the basis on which the `DiagnosticExtract` template has been defined.

### 3.2 Abstraction from EcuC Level

The `DiagnosticExtract` template does not only focus on relevant diagnostic properties and requirements but also - if required - lift them onto an appropriate abstraction level to make them meaningfully exchangeable (e.g. debouncing requirements that abstract from mapping on a concrete ECU).

However, for many EcuC parameters identified as relevant, an abstraction is not useful or not required and thus, these parameters are mapped 1:1 to equivalent elements of the `DiagnosticExtract` template.

**[TPS\_DEXT\_01140] Values contained in `DiagnosticExtract` shall be taken for the derivation of basic software modules** [The values specified in a given `DiagnosticExtract` shall be taken for the derivation of basic software modules in the diagnostic stack.

This means that parameter values in the EcuC are created that could be subject to constraints, e.g. a valid interval.] ()

Therefore, model elements in the `DiagnosticExtract` shall be carefully checked against the constraints formulated in EcuC. However, this document does not contain specific constraints on a detailed basis.

### 3.3 Independence of Definition

With respect to development processes, the `DiagnosticExtract` format also enables more independence when defining requirements on diagnostic functionality than possible with EcuC parameters. The approach of “decentralized configuration” is met in the `DiagnosticExtract` template in mainly two ways described in the following sub-chapters.

#### 3.3.1 Use of `<<atpSplittable>>` enabling separation of elements over several physical files

Most elements of the `DiagnosticExtract` template can be split over several physical files. Therefore, parts of these elements (e.g. certain attributes) can be defined by, for example, an OEM and other parts of these elements by, for example, an ECU supplier.

#### 3.3.2 Use of self-contained mapping elements

Many diagnostic requirements are established by mappings between diagnostic elements (e.g., DTC to DemEvent mapping). However, the “decentralized configuration” approach requires that these mappings can be flexibly defined at almost any time within the ECU development process and by any of the involved companies respectively roles.

Therefore, the `DiagnosticExtract` template defines self-contained mapping elements that have references to two (or potentially more) diagnostic elements to define a mapping.

The self-contained mapping elements can be created any time after the diagnostic elements to be mapped together have been defined. Alternatively, a mapping element can be created after only one diagnostic element has been defined indicating the need to make the mapping complete by defining the additional diagnostic element(s) to map to.

## 4 Common Meta Model Elements

### 4.1 Introduction

This chapter contains a description of the meta-model for the specification of the `DiagnosticExtract` in AUTOSAR. The goal of the specification of the `DiagnosticExtract` is to contribute to the description of the configuration of the `Diagnostic Communication Manager` [10] (Dcm) and the `Diagnostic Event Manager` [11] (Dem)

The meta-model can be roughly divided into five sections

- A common section that contains meta-classes shared between the description of the diagnostic services (that roughly corresponds to the Dcm) and the diagnostic event handling (that roughly corresponds to the Dem), see section 4.2.
- A section dedicated to the configuration of the diagnostic services, see section 5.
- A section dedicated to the configuration of the diagnostic event handling, see section 6.
- A section dedicated to the configuration of the functional inhibition from the diagnostics point of view, see section 7.
- A section dedicated to the configuration of the diagnostics on J1939, see section 8.

### 4.2 Data Identifier vs. Routine vs. Data Element

This chapter highlights the formal modeling of some of the central parts of AUTOSAR diagnostics when it comes to configuration. There are some concepts widely used that need to be reflected in the meta-model.

The purpose of the `DiagnosticCommonElement` is to provide a common reference target for all kinds of diagnostic elements. This aspect is explained in more detail in section 4.4.

The purpose of a `Data Identifier` (DID) is to associate a unique numerical value to a piece of data related to diagnostics. From the modeling point of view, this means that the modeling of the `Data Identifier` needs to provide an attribute that represents the numeric value as well as a relation to a `Data Element` representing a set of diagnostic piece of data.

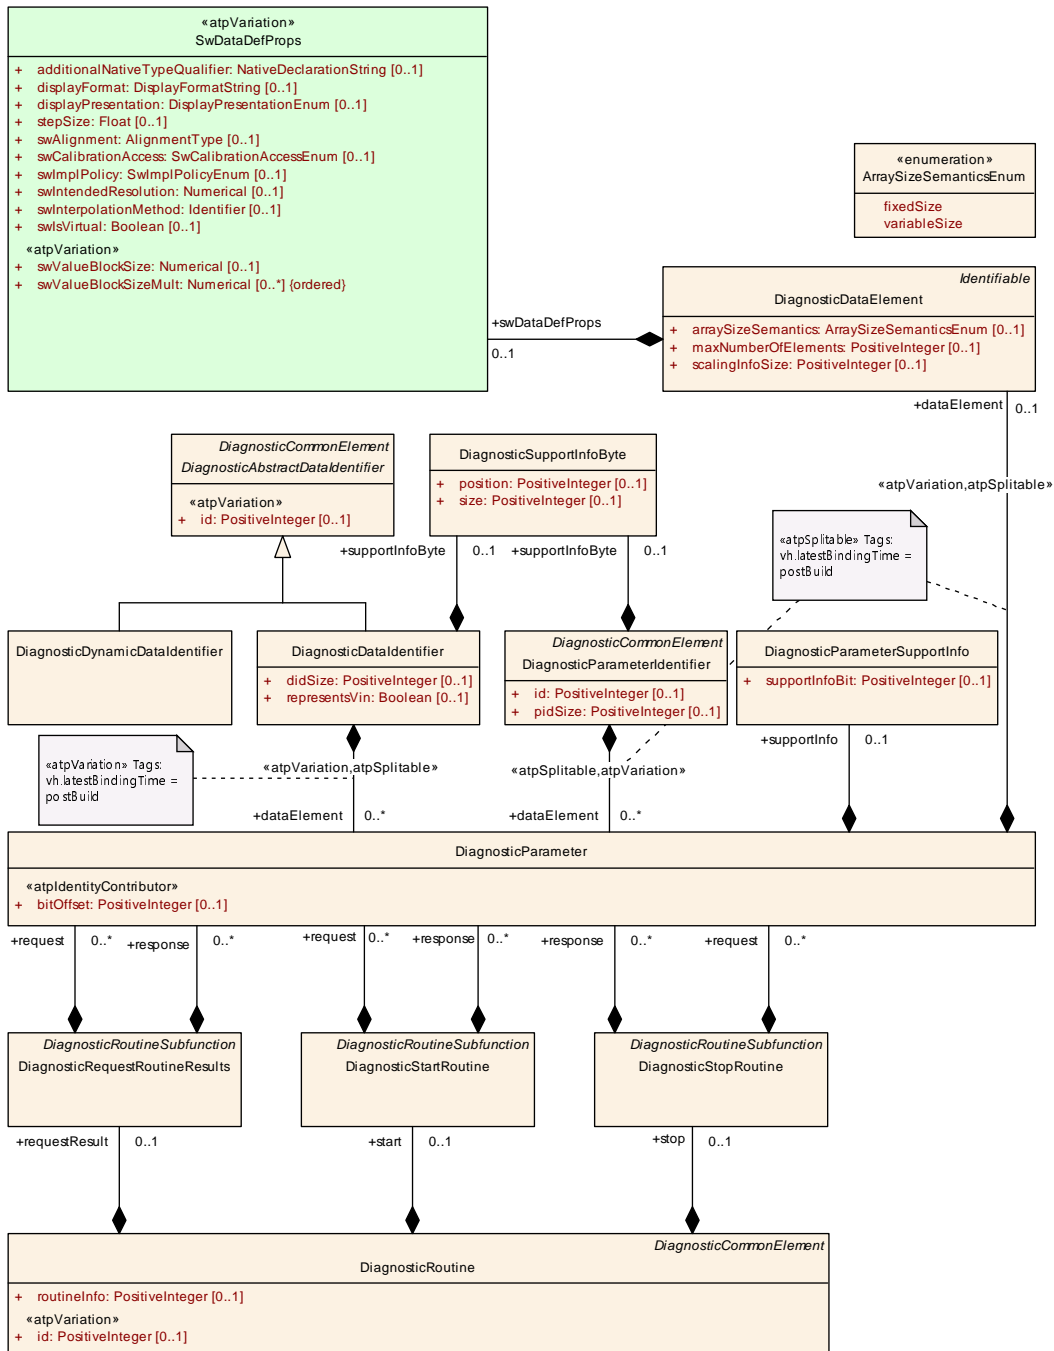

Figure 4.1: Common Diagnostic elements

[TPS\_DEXT\_01000] AUTOSAR diagnostics supports two kinds of data identifiers  
[In AUTOSAR, two kinds of data identifiers are supported:

- The `DiagnosticDataIdentifier` inherits from `DiagnosticAbstractDataIdentifier` and is used to define data identifiers fully known at configuration time. A `DiagnosticDataIdentifier` shall have at least 1 `dataElement`.
- The `DiagnosticDynamicDataIdentifier` inherits from `DiagnosticAbstractDataIdentifier` and is used to define data identifiers fully known **only**

at run time. Consequently, there is **no formal means** to define `dataElement` at configuration time.

id	PositiveInteger	0..1	attr	This is the numerical identifier used to identify the <i>DiagnosticAbstractDataIdentifier</i> in the scope of diagnostic workflow  <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime

**Table 4.5: DiagnosticAbstractDataIdentifier**

**[constr\_1793] Existence of attribute [DiagnosticAbstractDataIdentifier.id](#)**  
 [For each [DiagnosticAbstractDataIdentifier](#), attribute `id` shall exist **at the time when the DEXT is complete.**]()

**[TPS\_DEXT\_01072] Purpose of attribute [DiagnosticDataIdentifier.representsVin](#)**  
 [There is a use case for identifying a specific [DiagnosticDataIdentifier](#) that carries the so-called *vehicle identification number* (VIN).

It is therefore important to be able to formally indicate this characteristic. For this purpose the attribute [DiagnosticDataIdentifier.representsVin](#) is available.]  
 ([RS\\_DEXT\\_00034](#))

**[constr\_1324] Existence of attribute [DiagnosticDataIdentifier.representsVin](#)**  
 [Within the context of a given [DiagnosticContributionSet](#), the attribute [DiagnosticDataIdentifier.representsVin](#) shall have the value `true` for only a single [DiagnosticDataIdentifier](#).]()

Please note that the VIN is only relevant in the context of *diagnostics over IP* (DoIP). However, there is no constraint that bounds the validity of [\[constr\\_1324\]](#) to the existence of a [DiagnosticConnection](#) that is build on top of an IP stack.

If the attribute exists and there is no IP used then the meaning of the attribute is simply irrelevant. Anyway, this situation should not be attributed to a misconfiguration.

The concept of the `Data Element` represents a piece of information decomposed from the data identified by a DID and exchanged between the DEM and, for example, a tester.

The nature of such a `Data Element` could be compared to the nature of an `ISignal`<sup>1</sup> and therefore the modeling of a `Data Element` by means of the meta-class [DiagnosticDataElement](#) aggregates [SwDataDefProps](#) in the role `swDataDefProps` in order to provide a reference to [SwBaseType](#).

The aggregation of [SwDataDefProps](#) can also be used to refer to a [DataConstr](#) in order to specify a valid data range for the [DiagnosticDataElement](#).

<sup>1</sup>which represents the payload in “regular” bus communication

<b>Class</b>	<b>DiagnosticDataElement</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::CommonDiagnostics			
<b>Note</b>	This meta-class represents the ability to describe a concrete piece of data to be taken into account for diagnostic purposes.			
<b>Base</b>	ARObject, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
arraySizeSemantics	<a href="#">ArraySizeSemanticsEnum</a>	0..1	attr	This attribute controls the meaning of the value of the array size.
maxNumberOfElements	PositiveInteger	0..1	attr	The existence of this attribute turns the data instance into an array of data. The attribute determines the size of the array in terms of how many elements the array can take.
scalingInfoSize	PositiveInteger	0..1	attr	Size in bytes of scaling information for the DiagnosticDataElement if used with DiagnosticReadScalingDataByIdentifier
swDataDefProps	<a href="#">SwDataDefProps</a>	0..1	aggr	This property allows to specify data definition properties in order to support the definition of e.g. computation formulae and data constraints.

**Table 4.6: DiagnosticDataElement**

**[constr\_1394] Value of [DiagnosticDataElement.maxNumberOfElements](#) depending on its existence** [If the attribute [DiagnosticDataElement.maxNumberOfElements](#) exists then its value shall be greater than 0.]()

**[TPS\_DEXT\_01134] Definition of a [DiagnosticDataElement](#) used in the context of a DID obtained by sender-receiver communication** [If the [DiagnosticDataElement](#) is aggregated by a [DiagnosticParameter](#) that in turn is aggregated by a subclass of [DiagnosticAbstractDataIdentifier](#) and the [DiagnosticDataElement](#) is also referenced by a [DiagnosticServiceDataMapping](#) then the referenced [DiagnosticDataElement](#) (by way of [SwDataDefProps](#)) shall refer to a [SwBaseType](#) with attribute [baseTypeSize](#) set to **either** 8, 16, or 32 and attribute [baseTypeEncoding](#) set to **either**

- NONE (for 8, 16, or 32 bit) or
- 2C (for 8, 16, or 32 bit) or
- IEEE754 (for 32 bit).

In this case it is possible to define the [DiagnosticDataElement](#) either as a scalar or as an array (see [\[TPS\\_DEXT\\_01001\]](#), [\[TPS\\_DEXT\\_01002\]](#)).] ([RS\\_DEXT\\_00034](#))

**[TPS\_DEXT\_01135] Definition of a [DiagnosticDataElement](#) used in the context of a DID obtained by client/server communication** [If the [DiagnosticDataElement](#) is aggregated by a [DiagnosticParameter](#) that in turn is aggregated by a subclass of [DiagnosticAbstractDataIdentifier](#) and the [DiagnosticDataElement](#) is also referenced by a [DiagnosticServiceSwMapping](#) then the referenced [DiagnosticDataElement](#) (by way of [SwDataDefProps](#)) shall refer to a [SwBaseType](#) with attribute [baseTypeSize](#) set to **either** 8, 16, or 32 and attribute [baseTypeEncoding](#) set to **either**

- NONE (for 8, 16, or 32 bit) or

- 2C (for 8, 16, or 32 bit) or
- IEEE754 (for 32 bit).

In this case it is only possible to define the `DiagnosticDataElement` as an array (see [TPS\_DEXT\_01001], [TPS\_DEXT\_01002]). The ability to define a Variable-Size Array shall only be used for the last element of the DID.] (RS\_DEXT\_00034)

**[TPS\_DEXT\_01136] Definition of a `DiagnosticDataElement` used in the context of a diagnostic routine** [If the `DiagnosticDataElement` is aggregated by a `DiagnosticParameter` that in turn is aggregated by either a `DiagnosticStartRoutine`, `DiagnosticStopRoutine`, or `DiagnosticRequestRoutineResults` then the `DiagnosticDataElement` (by way of `SwDataDefProps`) shall refer to a `SwBaseType` with attribute `baseTypeSize` to either 8, 16, or 32 and attribute `baseTypeEncoding` set to either

- NONE (for 8, 16, or 32 bit) or
- 2C (for 8, 16, or 32 bit) or
- IEEE754 (for 32 bit).

In this case it is possible to define the `DiagnosticDataElement` either as a scalar or as an array (see [TPS\_DEXT\_01001], [TPS\_DEXT\_01002]). The ability to define a Variable-Size Array shall only be used for the last argument to the diagnostic routine.] (RS\_DEXT\_00034)

**[constr\_1470] Value of `DiagnosticParameter.bitOffset`** [The value of `DiagnosticParameter.bitOffset` shall only be set to a multiple of 8.] ()

Enumeration	ArraySizeSemanticsEnum
Package	M2::AUTOSARTemplates::CommonStructure::ImplementationDataTypes
Note	This type controls how the information about the number of elements in an <code>ApplicationArrayDataType</code> is to be interpreted.
Literal	Description
fixedSize	This means that the <code>ApplicationArrayDataType</code> will always have a fixed number of elements. <b>Tags:</b> atp.EnumerationLiteralIndex=0
variableSize	This implies that the actual number of elements in the <code>ApplicationArrayDataType</code> might vary at run-time. The value of <code>arraySize</code> represents the maximum number of elements in the array. <b>Tags:</b> atp.EnumerationLiteralIndex=1

**Table 4.7: ArraySizeSemanticsEnum**

The attribute `DiagnosticDataIdentifier.didSize` should be used if size of the DID data is intended to be enforced<sup>2</sup>.

**[constr\_1552] `DiagnosticDataIdentifier` referenced by `DiagnosticDataIdentifierSet`** [If a `DiagnosticDataIdentifier` is referenced by `DiagnosticDataIdentifierSet` then the `DiagnosticDataIdentifier` shall not have gaps in between individual elements (as indicated by `DiagnosticParam-`

<sup>2</sup>one use case for this enforcement was described by the removed [constr\_1471] contained in former versions of this document

`eter.bitOffset` and the length of the aggregated `DiagnosticDataElement`) or at the end of the `DiagnosticDataIdentifier` (as indicated by attribute `DiagnosticDataIdentifier.didSize`).]()

**[TPS\_DEXT\_01138] Applicability of `DiagnosticDataIdentifier.supportInfoByte`** [The attribute `DiagnosticDataIdentifier.supportInfoByte` may exist if the value of `DiagnosticDataIdentifier.id` is **in the range 0xF400-0xF4FF**.

A typical case for the existence of `DiagnosticDataIdentifier.supportInfoByte` is the understanding that the `DiagnosticDataIdentifier` is relevant for OBD and the `DiagnosticDataIdentifier.id` is in the designated range.]([RS\\_DEXT\\_00034](#))

**[constr\_1472] Existence of `DiagnosticDataIdentifier.supportInfoByte`** [The attribute `DiagnosticDataIdentifier.supportInfoByte` **shall not exist** if the value of `DiagnosticDataIdentifier.id` is **outside the range 0xF400-0xF4FF**.]()

#### 4.2.1 Usage of `SwDataDefProps`

Please note that the definitions of properties like computation methods<sup>3</sup>, limits<sup>4</sup>, or units<sup>5</sup> of diagnostic data elements is based on shared resources of the AUTOSAR meta-model, namely by aggregation of meta-class `SwDataDefProps`.

This meta-class contributes a wealth of possible properties related to the definition of data in general and, in this case, diagnostics in particular.

However, it is important to understand that `SwDataDefProps` is so expressive and versatile that its applicability needs to be constrained (in this specific case, see [[constr\\_1325](#)]) for specific deployments according to the requirements that originate from the semantics of the piece of data that is decorated by `SwDataDefProps`.

**[constr\_1325] Allowed attributes of `SwDataDefProps` for `DiagnosticDataElement.swDataDefProps`** [The allowed attributes of `SwDataDefProps` for the aggregation in the role `DiagnosticDataElement.swDataDefProps` are defined in table 4.8.]()

displayPresentation	DisplayPresentationEnum	0..1	attr	This attribute controls the presentation of the related data for measurement and calibration tools.
implementationDataType	AbstractImplementationDataType	0..1	ref	This association denotes the ImplementationDataType of a data declaration via its aggregated SwDataDefProps. It is used whenever a data declaration is not directly referring to a base type. Especially <ul style="list-style-type: none"> <li>• redefinition of an ImplementationDataType via a "typedef" to another ImplementationDatatype</li> <li>• the target type of a pointer (see SwPointerTarget Props), if it does not refer to a base type directly</li> <li>• the data type of an array or record element within an ImplementationDataType, if it does not refer to a base type directly</li> <li>• the data type of an SwServiceArg, if it does not refer to a base type directly</li> </ul> <b>Tags:</b> xml.sequenceOffset=215
invalidValue	<a href="#">ValueSpecification</a>	0..1	aggr	Optional value to express invalidity of the actual data element. <b>Tags:</b> xml.sequenceOffset=255
stepSize	Float	0..1	attr	This attribute can be used to define a value which is added to or subtracted from the value of a DataPrototype when using up/down keys while calibrating.
swAddrMethod	SwAddrMethod	0..1	ref	Addressing method related to this data object. Via an association to the same SwAddrMethod it can be specified that several DataPrototypes shall be located in the same memory without already specifying the memory section itself. <b>Tags:</b> xml.sequenceOffset=30
swAlignment	AlignmentType	0..1	attr	The attribute describes the intended alignment of the DataPrototype. If the attribute is not defined the alignment is determined by the swBaseType size and the memory AllocationKeywordPolicy of the referenced SwAddr Method. <b>Tags:</b> xml.sequenceOffset=33
swBitRepresentation	SwBitRepresentation	0..1	aggr	Description of the binary representation in case of a bit variable. <b>Tags:</b> xml.sequenceOffset=60
swCalibrationAccess	SwCalibrationAccessEnum	0..1	attr	Specifies the read or write access by MCD tools for this data object. <b>Tags:</b> xml.sequenceOffset=70
swCalprmAxisSet	SwCalprmAxisSet	0..1	aggr	This specifies the properties of the axes in case of a curve or map etc. This is mainly applicable to calibration parameters. <b>Tags:</b> xml.sequenceOffset=90

Class	<<atpVariation>> SwDataDefProps			
swComparisonVariable	SwVariableRefProxy	*	aggr	Variables used for comparison in an MCD process. <b>Tags:</b> xml.sequenceOffset=170 xml.typeElement=false
swDataDependency	SwDataDependency	0..1	aggr	Describes how the value of the data object has to be calculated from the value of another data object (by the MCD system). <b>Tags:</b> xml.sequenceOffset=200
swHostVariable	SwVariableRefProxy	0..1	aggr	Contains a reference to a variable which serves as a host-variable for a bit variable. Only applicable to bit objects. <b>Tags:</b> xml.sequenceOffset=220 xml.typeElement=false
swImplPolicy	SwImplPolicyEnum	0..1	attr	Implementation policy for this data object. <b>Tags:</b> xml.sequenceOffset=230
swIntendedResolution	Numerical	0..1	attr	The purpose of this element is to describe the requested quantization of data objects early on in the design process.  The resolution ultimately occurs via the conversion formula present (compuMethod), which specifies the transition from the physical world to the standardized world (and vice-versa) (here, "the slope per bit" is present implicitly in the conversion formula).  In the case of a development phase without a fixed conversion formula, a pre-specification can occur through swIntendedResolution.  The resolution is specified in the physical domain according to the property "unit". <b>Tags:</b> xml.sequenceOffset=240
swInterpolationMethod	Identifier	0..1	attr	This is a keyword identifying the mathematical method to be applied for interpolation. The keyword needs to be related to the interpolation routine which needs to be invoked. <b>Tags:</b> xml.sequenceOffset=250
swIsVirtual	Boolean	0..1	attr	This element distinguishes virtual objects. Virtual objects do not appear in the memory, their derivation is much more dependent on other objects and hence they shall have a swDataDependency . <b>Tags:</b> xml.sequenceOffset=260
swPointerTargetProps	SwPointerTargetProps	0..1	aggr	Specifies that the containing data object is a pointer to another data object. <b>Tags:</b> xml.sequenceOffset=280
swRecordLayout	SwRecordLayout	0..1	ref	Record layout for this data object. <b>Tags:</b> xml.sequenceOffset=290
swRefreshTiming	MultidimensionalTime	0..1	aggr	This element specifies the frequency in which the object involved shall be or is called or calculated. This timing can be collected from the task in which write access processes to the variable run. But this cannot be done by the MCD system.

Class	<<atpVariation>> SwDataDefProps			
				<p style="text-align: center;">△</p> <p>So this attribute can be used in an early phase to express the desired refresh timing and later on to specify the real refresh timing.</p> <p><b>Tags:</b>xml.sequenceOffset=300</p>
swTextProps	SwTextProps	0..1	aggr	<p>the specific properties if the data object is a text object.</p> <p><b>Tags:</b>xml.sequenceOffset=120</p>
swValueBlock Size	Numerical	0..1	attr	<p>This represents the size of a Value Block</p> <p><b>Stereotypes:</b> atpVariation</p> <p><b>Tags:</b> vh.latestBindingTime=preCompileTime xml.sequenceOffset=80</p>
swValueBlock SizeMult (ordered)	Numerical	*	attr	<p>This attribute is used to specify the dimensions of a value block (VAL_BLK) for the case that that value block has more than one dimension.</p> <p>The dimensions given in this attribute are ordered such that the first entry represents the first dimension, the second entry represents the second dimension, and so on.</p> <p>For one-dimensional value blocks the attribute swValueBlockSize shall be used and this attribute shall not exist.</p> <p><b>Stereotypes:</b> atpVariation</p> <p><b>Tags:</b>vh.latestBindingTime=preCompileTime</p>
unit	<a href="#">Unit</a>	0..1	ref	<p>Physical unit associated with the semantics of this data object. This attribute applies if no compuMethod is specified. If both units (this as well as via compuMethod) are specified the units shall be compatible.</p> <p><b>Tags:</b>xml.sequenceOffset=350</p>
valueAxisDataType	<a href="#">ApplicationPrimitiveDataType</a>	0..1	ref	<p>The referenced ApplicationPrimitiveDataType represents the primitive data type of the value axis within a compound primitive (e.g. curve, map). It supersedes CompuMethod, Unit, and BaseType.</p> <p><b>Tags:</b>xml.sequenceOffset=355</p>

**Table 4.10: SwDataDefProps**

## 4.2.2 Definition of Arrays

There are several use cases for a [DiagnosticDataElement](#) that actually represents an array of information. In some cases the array size is static and will not change at run-time, and in some cases the array size needs to change at run-time to fulfill the intended purpose.

**[TPS\_DEXT\_01001] Definition of a fixed-sized array** [A [DiagnosticDataElement](#) shall be interpreted as a **fixed-size array** if **all** of the following conditions apply:

1. The attribute [DiagnosticDataElement.maxNumberOfElements](#) exists.
2. The value of the attribute [DiagnosticDataElement.maxNumberOfElements](#) is set to a value > 0.

3. The value of `DiagnosticDataElement.arraySizeSemantics` either does not exist or is set to `ArraySizeSemanticsEnum.fixedSize`.

]([RS\\_DEXT\\_00034](#), [RS\\_DEXT\\_00038](#))

**[TPS\_DEXT\_01002] Definition of a variable-sized array** [A `DiagnosticDataElement` shall be interpreted as a **variable-size array** if **all** of the following conditions apply:

1. The attribute `DiagnosticDataElement.maxNumberOfElements` exists.
2. The value of the attribute `DiagnosticDataElement.maxNumberOfElements` is set to a value > 0.
3. The value of `DiagnosticDataElement.arraySizeSemantics` is set to `ArraySizeSemanticsEnum.variableSize`.

The value of `DiagnosticDataElement.maxNumberOfElements` shall be considered the maximum array size in terms of the number of elements.]([RS\\_DEXT\\_00034](#), [RS\\_DEXT\\_00038](#))

**[constr\_1326] Existence of a variable-sized array** [The value of the attribute `DiagnosticDataElement.arraySizeSemantics` **shall not** be set to `ArraySizeSemanticsEnum.variableSize` if the respective `DiagnosticDataElement` is referenced from a `DiagnosticServiceDataMapping`.]()

### 4.2.3 Definition of textual Strings

`DiagnosticDataElement` can be used to model a **textual string** that shall be sent to or received from the ECU by the tester.

In this case it will be necessary to define the **intended encoding** such that the part of the software on the ECU that produces or consumes of the string on the ECU can be checked (after the establishment of a `DiagnosticMapping`) for a matching encoding specification.

The encoding in the scope of the `DiagnosticDataElement` can be defined using the attribute `DiagnosticDataElement.swDataDefProps.baseType.baseTypeDefinition.baseTypeEncoding`.

## 4.3 Textual Documentation

A `Data Identifier` also usually comes with some textual description that explains the meaning of the `Data Identifier` in short form. This ability is available via the inheritance from `Identifiable`, in particular by means of the attributes `desc` and/or `introduction` (see Figure 4.2).

This also means that the ability to add some form of textual description is widely usable in the scope of the `DiagnosticExtract`. Many meta-classes are derived from e.g. `DiagnosticCommonElement` (which inherits from `Identifiable`) or directly from `Identifiable` and therefore qualify for the described form of documentation.

In other words, the technology described in Figures 4.2 and 4.3 is not limited to `DiagnosticDataElement` but has a much wider applicability in the context of the `DiagnosticExtract`.

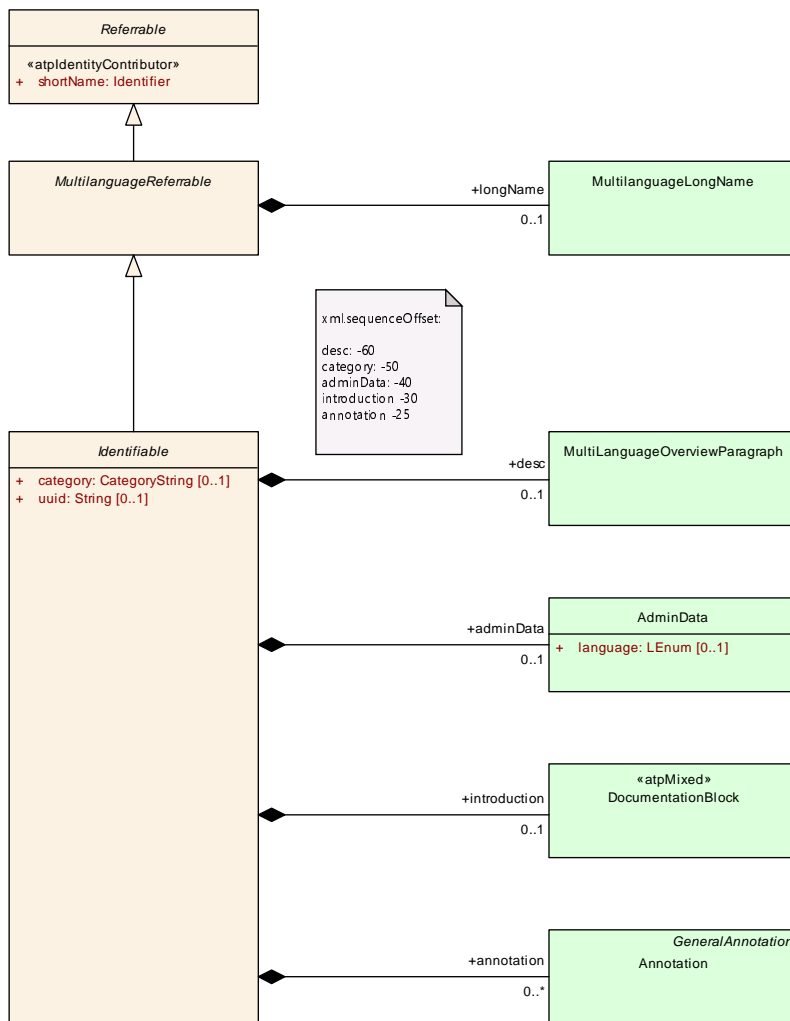

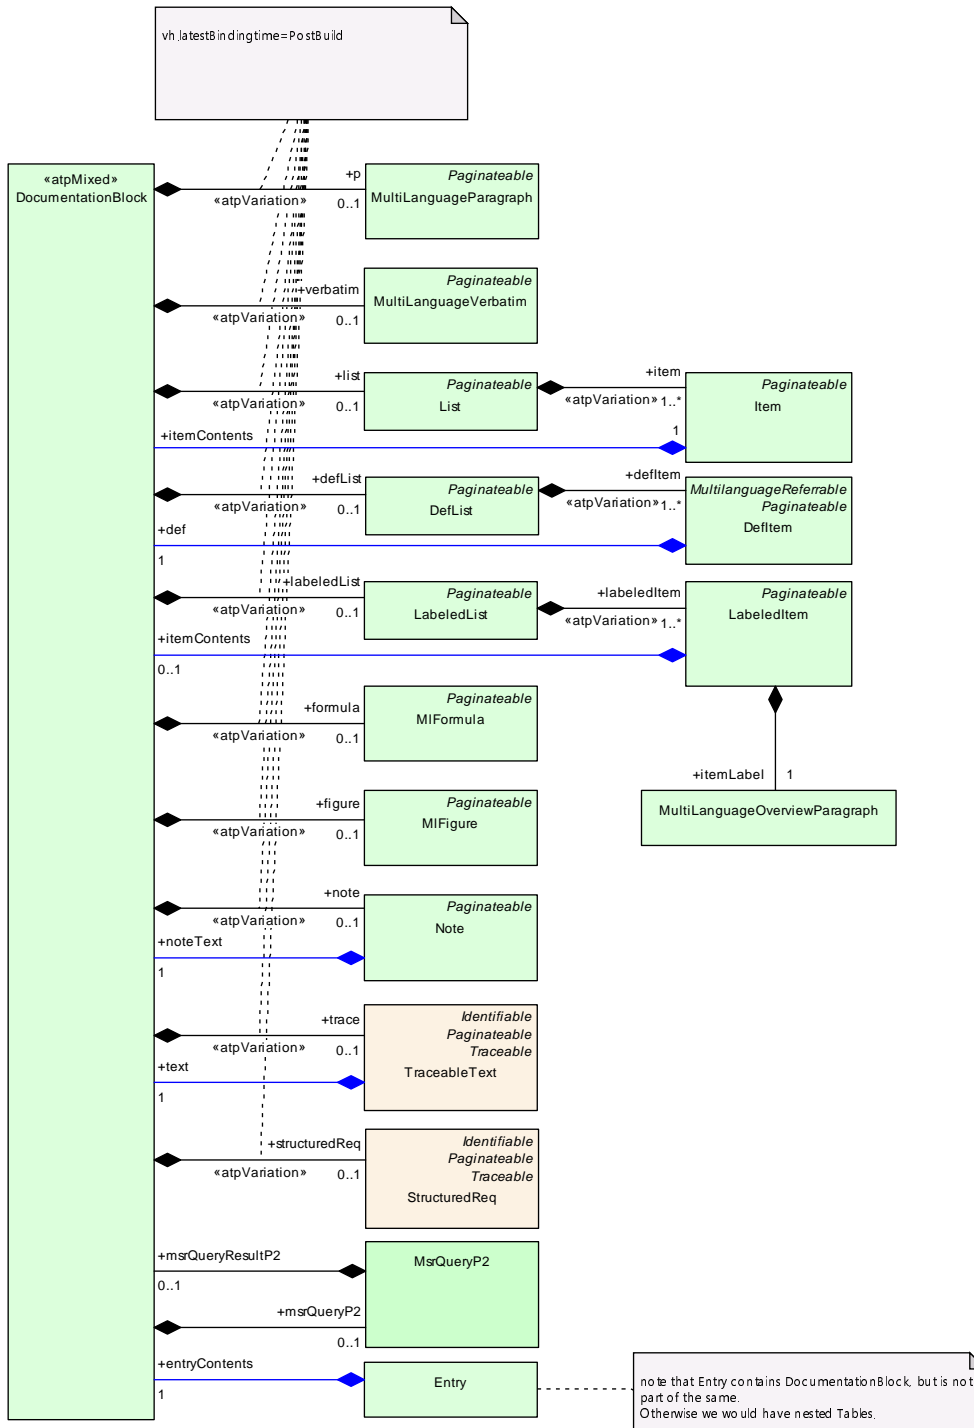

Figure 4.2: Definition of a textual description by means of `desc` and `introduction`

The details regarding the specification of textual content that goes along a given diagnostics element is detailed in Figure 4.3. In fact, `DocumentationBlock` provides a very sophisticated ability to define structured text that may consist e.g. of multiple paragraphs (formalized by meta-class `MultiLanguageOverviewParagraph` aggregated in the role `p`).

In addition to the ability to attach structured text, it is also possible to use the `annotation` (see Figure 4.2) to add short annotations (comparable to the usage of sticky notes) to diagnostic elements.

**Figure 4.3: Details of the modeling of DocumentationBlock**

<b>Class</b>	<<atpMixed>> <b>DocumentationBlock</b>			
<b>Package</b>	M2::MSR::Documentation::BlockElements			
<b>Note</b>	This class represents a documentation block. It is made of basic text structure elements which can be displayed in a table cell.			
<b>Base</b>	ARObject			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
defList	DefList	0..1	aggr	This represents a definition list in the documentation block. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=40
figure	MIFigure	0..1	aggr	This represents a figure in the documentation block. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=70
formula	MIFormula	0..1	aggr	This is a formula in the definition block. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=60
labeledList	LabeledList	0..1	aggr	This represents a labeled list. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=50
list	List	0..1	aggr	This represents numbered or unnumbered list. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=30
msrQueryP2	MsrQueryP2	0..1	aggr	This represents automatically contributed contents provided by an msrquery in the context of Documentation Block.
note	Note	0..1	aggr	This represents a note in the text flow. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=80
p	MultiLanguage Paragraph	0..1	aggr	This is one particular paragraph. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=10
structuredReq	<a href="#">StructuredReq</a>	0..1	aggr	This aggregation supports structured requirements embedded in a documentation block. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=100

Class	<<atpMixed>> DocumentationBlock			
trace	TraceableText	0..1	aggr	<p>This represents traceable text in the documentation block. This allows to specify requirements/constraints in any documentation block.</p> <p>The kind of the trace is specified in the category.</p> <p><b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=90</p>
verbatim	MultiLanguageVerbatim	0..1	aggr	<p>This represents one particular verbatim text.</p> <p><b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild xml.sequenceOffset=20</p>

**Table 4.12: MultiLanguageOverviewParagraph**

## 4.4 Diagnostic Contribution

[TPS\_DEXT\_01003] **DiagnosticContributionSet** is the central part of the **DiagnosticExtract** [The central part of formalization of the concept of the **DiagnosticExtract** is the **DiagnosticContributionSet**.

To some extent, it fulfills a similar role as the **System** [6] in the communication domain.] (**RS\_DEXT\_00001**)

The **DiagnosticContributionSet** maintains references to **DiagnosticCommonElement** and by this means the actual definition of the extent of diagnostic contribution takes place.

In other words, the actual extent of a given contribution is created by the collection of **DiagnosticCommonElements** referenced by the **DiagnosticContributionSet**.

[TPS\_DEXT\_01004] **DiagnosticContributionSet** defines the scope of the **DiagnosticExtract** [The **DiagnosticContributionSet** has the ability to define the scope of the given **DiagnosticExtract**. This means that the **DiagnosticCon-**

`tributionSet` represents the `DiagnosticExtract` for the rest of the AUTOSAR model.

In other words, the `DiagnosticContributionSet` assumes a similar crucial role as the `System` in that it defines the extent to which a given description of diagnostic behavior is valid.

Any downstream processing of the description of diagnostic behavior shall take the scope of information to be processed from the definition of the `DiagnosticContributionSet` in its role as the root element of the description of diagnostic behavior.

During different stages of the design methodology, the scope of the `DiagnosticContributionSet` may vary between the scope of an entire system down to the contribution of a specific tier-1 supplier to a much bigger context.](*RS\_DEXT\_00001*)

**[TPS\_DEXT\_01055] Standardized values of `DiagnosticContributionSet.category`** [The scope of the `DiagnosticContributionSet`, on the other hand is determined by the value of its `category`. The following values are predefined by AUTOSAR:

**DIAGNOSTICS\_ABSTRACT\_SYSTEM\_DESCRIPTION** this `DiagnosticContributionSet` represents a more or less high-level definition that can be taken as a template for creating concrete `DiagnosticContributionSets` of `category` `DIAGNOSTICS_SYSTEM_EXTRACT` or `DIAGNOSTICS_ECU_EXTRACT`

**DIAGNOSTICS\_SYSTEM\_EXTRACT** the scope of this `DiagnosticContributionSet` consists of several `EcuInstances`.

**DIAGNOSTICS\_ECU\_EXTRACT** the scope of this `DiagnosticContributionSet` consists of a **single** `EcuInstances`. A `DiagnosticContributionSet` of `category` `DIAGNOSTICS_ECU_EXTRACT` shall be taken as the basis for the derivation of service software-components of the diagnostic stack.

](*RS\_DEXT\_00001*)

**[constr\_1327] Multiplicity of `DiagnosticEcuInstanceProps.ecuInstance`** [The multiplicity of `DiagnosticEcuInstanceProps.ecuInstance` shall be limited to 1 and the enclosing `DiagnosticContributionSet` shall only refer to at most one `DiagnosticEcuInstanceProps` **if** the enclosing `DiagnosticContributionSet` is of `category` `DIAGNOSTICS_ECU_EXTRACT`.]()

**[constr\_1328] Consistency of `DiagnosticEcuInstanceProps.ecuInstance` and `DiagnosticServiceTable.ecuInstance`** [Each `DiagnosticServiceTable` referenced by any given `DiagnosticContributionSet` in the role `serviceTable` shall define a reference in the role `DiagnosticServiceTable.ecuInstance` to an `EcuInstance` that is also referenced in the role `DiagnosticEcuInstanceProps.ecuInstance` by a `DiagnosticEcuInstanceProps` referenced by the mentioned `DiagnosticContributionSet` **if** the respective `DiagnosticContributionSet` is of `category` `DIAGNOSTICS_ECU_EXTRACT`.]()

Please note that [constr\_1328] resolves an intentional redundancy in the meta-model. Both `DiagnosticContributionSet` and `DiagnosticServiceTable` are able refer to `EcuInstance` with the idea that both `DiagnosticContributionSet` and `DiagnosticServiceTable` can be modeled independently of each other.

Of course, once the `DiagnosticContributionSet` and `DiagnosticServiceTable` are integrated in the same context (in particular by establishing the reference `DiagnosticContributionSet.serviceTable`) the individual references to the applicable `EcuInstances` need to be consistent.

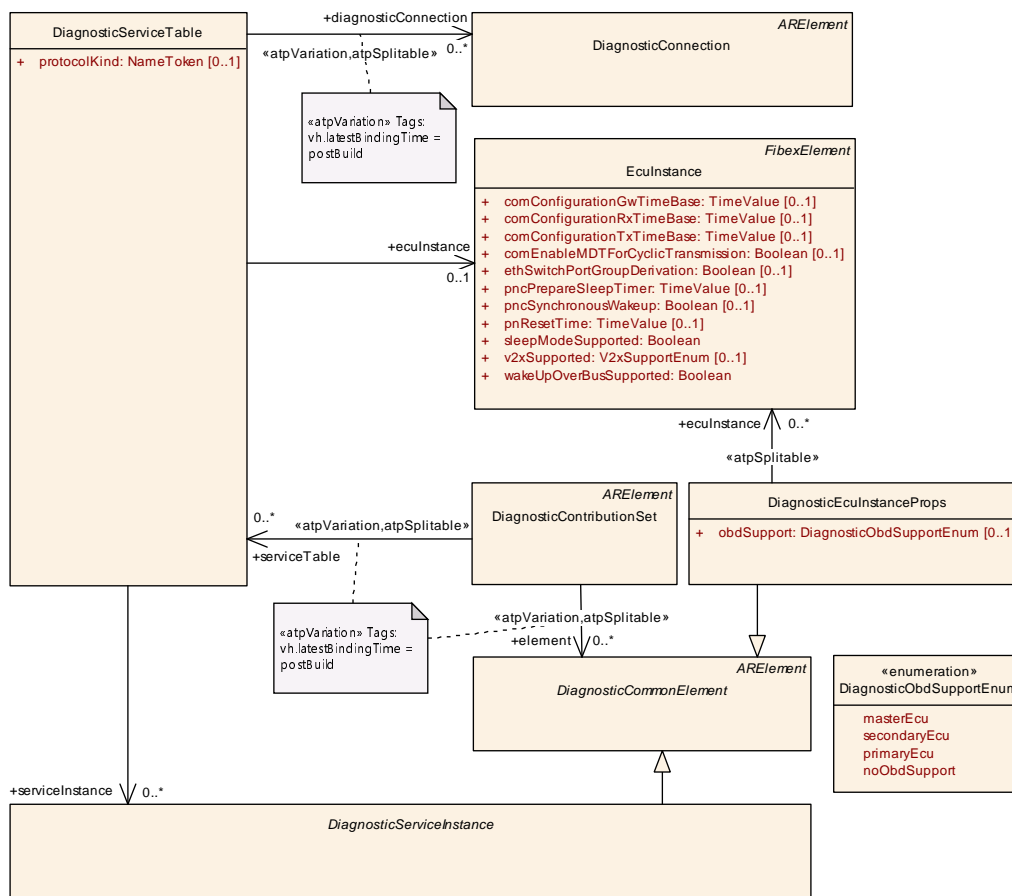

Figure 4.4: Diagnostic Contribution

[TPS\_DEXT\_01005] `DiagnosticContributionSet` can exist independently [The `DiagnosticContributionSet` has been modeled as an `ARElement` so that its instances can exist independently of the existence of context-providing model-elements inside a given `ARPackage`.] (*RS\_DEXT\_00001*)

[TPS\_DEXT\_01005] elaborates on an important aspect that makes the `DiagnosticExtract` independent of the existence of a context. For example, it would have been possible to aggregate `DiagnosticContributionSet` somewhere, e.g. at `System`.

This kind of modeling intentionally puts `DiagnosticContributionSet` on the same level as e.g. `System`, as far as model granularity is concerned.

<b>Class</b>	<b>DiagnosticContributionSet</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::DiagnosticContribution			
<b>Note</b>	<p>This meta-class represents a root node of a diagnostic extract. It bundles a given set of diagnostic model elements. The granularity of the DiagnosticContributionSet is arbitrary in order to support the aspect of decentralized configuration, i.e. different contributors can come up with an own DiagnosticContribution Set.</p> <p><b>Tags:</b>atp.recommendedPackage=DiagnosticContributionSets</p>			
<b>Base</b>	<i>ARElement, ARObject, CollectableElement, Identifiable, MultilanguageReferrable, PackageableElement, Referrable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
common Properties	<a href="#">DiagnosticCommon Props</a>	0..1	aggr	<p>This attribute represents a collection of diagnostic properties that are shared among the entire DiagnosticContributionSet.</p> <p><b>Stereotypes:</b> atpSplitable <b>Tags:</b>atp.Splitkey=commonProperties</p>
element	<a href="#">DiagnosticCommon Element</a>	*	ref	<p>This represents a DiagnosticCommonElement considered in the context of the DiagnosticContributionSet</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=element.diagnosticCommonElement, element.variationPoint.shortLabel vh.latestBindingTime=postBuild</p>
serviceTable	<a href="#">DiagnosticService Table</a>	*	ref	<p>This represents the collection of DiagnosticServiceTables to be considered in the scope of this DiagnosticContributionSet.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=serviceTable.diagnosticServiceTable, serviceTable.variationPoint.shortLabel vh.latestBindingTime=postBuild</p>

**Table 4.13: DiagnosticContributionSet**

The purpose of the [DiagnosticContributionSet](#) is to refer to all [DiagnosticCommonElements](#) that are relevant in the context of the [DiagnosticContributionSet](#).

It is not sufficient that a given [DiagnosticCommonElement](#) is referenced by another [DiagnosticCommonElement](#) but is not referenced by the same [DiagnosticContributionSet](#) that also references the referencing [DiagnosticCommonElement](#).

**[constr\_1745] Indirect reference to [DiagnosticCommonElement](#)** [If a [DiagnosticCommonElement](#) is referenced from within the context of another [DiagnosticCommonElement](#) and the referencing [DiagnosticCommonElement](#) is in turn referenced by a [DiagnosticContributionSet](#) in the role `element` then the referenced [DiagnosticCommonElement](#) shall also be referenced by the same [DiagnosticContributionSet](#).]()

Example: a [DiagnosticDataIdentifier](#) that is referenced by a [DiagnosticDataIdentifierSet](#) that is referenced by a [DiagnosticContributionSet](#) shall also be referenced by that [DiagnosticContributionSet](#). This scenario is depicted in Figure 4.5.

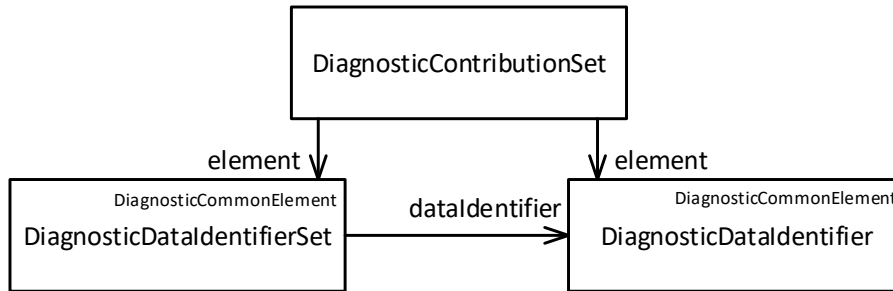

Figure 4.5: Visualization of example scenario for the indirect reference to [DiagnosticCommonElement](#)

## 4.5 Diagnostic Protocol

[TPS\_DEXT\_01124] Semantics of meta-class [DiagnosticProtocol](#) [The meta-class [DiagnosticProtocol](#) can be used to describe the usage of different diagnostic protocols as well as their priority.] ([RS\\_DEXT\\_00059](#))

<b>Class</b>	<b>DiagnosticProtocol</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::DiagnosticContribution			
<b>Note</b>	This meta-class represents the ability to define a diagnostic protocol. <b>Tags:</b> atp.recommendedPackage=DiagnosticProtocols			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnostic Connection	<a href="#">DiagnosticConnection</a>	*	ref	This represents the collection of applicable Diagnostic Connections for this DiagnosticProtocol. <b>Stereotypes:</b> atpSplittable; atpVariation <b>Tags:</b> atp.Splitkey=diagnosticConnection.diagnosticConnection, diagnosticConnection.variationPoint.shortLabel vh.latestBindingTime=postBuild
priority	PositiveInteger	0..1	attr	This represents the priority of the diagnostic protocol in comparison to other diagnostic protocols. Lower numeric values represent higher protocol priority: <ul style="list-style-type: none"> <li>• 0 - Highest protocol priority</li> <li>• 255 - Lowest protocol priority</li> </ul> <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
protocolKind	<a href="#">NameToken</a>	0..1	attr	This identifies the applicable protocol.

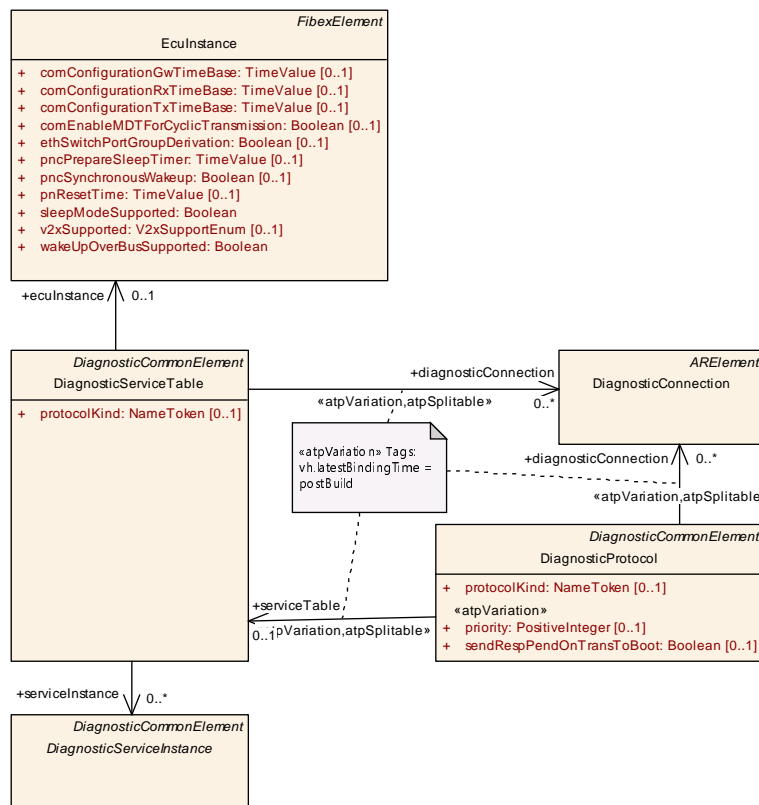

Class	DiagnosticProtocol			
sendRespPendOnTransToBoot	Boolean	0..1	attr	The purpose of this attribute is to define whether or not the ECU should send a NRC 0x78 (response pending) before transitioning to the bootloader (in this case the attribute shall be set to "true") or if the transition shall be initiated without sending NRC 0x78 (in this case the attribute shall be set to "false"). <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
serviceTable	<a href="#">DiagnosticServiceTable</a>	0..1	ref	This represents the service table applicable for the given diagnostic protocol. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=serviceTable.diagnosticServiceTable, serviceTable.variationPoint.shortLabel vh.latestBindingTime=postBuild

**Table 4.14: DiagnosticProtocol**

**Figure 4.6: Modeling of DiagnosticProtocol**

**[constr\_1794] Existence of attribute [DiagnosticProtocol.priority](#)** [For each [DiagnosticProtocol](#), attribute [priority](#) shall exist at the time when the DEXT is complete.]()

**[constr\_1795] Existence of attribute [DiagnosticProtocol.protocolKind](#)** [For each [DiagnosticProtocol](#), attribute [protocolKind](#) shall exist at the time when the DEXT is complete.]()

Each `DiagnosticProtocol` refers to at most one `DiagnosticServiceTable` and to a collection of `DiagnosticConnections`.

Please note that both `DiagnosticServiceTable` and `DiagnosticProtocol` have an attribute named `protocolKind`.

<b>Class</b>	<b>DiagnosticServiceTable</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::DiagnosticContribution			
<b>Note</b>	This meta-class represents a model of a diagnostic service table, i.e. the UDS services applicable for a given ECU. <b>Tags:</b> atp.recommendedPackage=DiagnosticServiceTables			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">Multilanguage</a> , <a href="#">Referrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnosticConnection	<a href="#">DiagnosticConnection</a>	*	ref	This represents the <code>DiagnosticConnection</code> that is taken for handling the data transmission for the enclosing <code>DiagnosticServiceTable</code> .  It is possible to refer to more than one <code>diagnosticConnections</code> in order to support more than one diagnostic tester.  <b>Stereotypes:</b> atpSplittable; atpVariation <b>Tags:</b> atp.Splitkey=diagnosticConnection.diagnosticConnection, diagnosticConnection.variationPoint.shortLabel vh.latestBindingTime=postBuild
eculInstance	<a href="#">EculInstance</a>	0..1	ref	This represents the applicable <code>EculInstance</code> for this <code>DiagnosticServiceTable</code> .
protocolKind	<a href="#">NameToken</a>	0..1	attr	This identifies the applicable protocol.
serviceInstance	<a href="#">DiagnosticServiceInstance</a>	*	ref	This represents the collection of <code>DiagnosticServiceInstances</code> to be considered in the scope of this <code>DiagnosticServiceTable</code> ,

**Table 4.15: DiagnosticServiceTable**

**[constr\_1796] Existence of attribute `DiagnosticServiceTable.serviceInstance`** [For each `DiagnosticServiceTable`, attribute `serviceInstance` shall exist **at the time when the DEXT is complete.**]()

**[constr\_1797] Existence of attribute `DiagnosticServiceTable.protocolKind`** [For each `DiagnosticServiceTable`, attribute `protocolKind` shall exist **at the time when the DEXT is complete.**]()

The attribute `DiagnosticServiceTable.protocolKind` shall be used to define the applicability of a `DiagnosticServiceTable` for a given protocol before the formal definition of the protocol even exists.

In other words, the attribute gives the designer of the `DiagnosticServiceTable` a means to express an intention about the usage of the `DiagnosticServiceTable`.

The attribute `DiagnosticServiceTable.protocolKind`, on the other hand, is used to define the actual nature of the `DiagnosticProtocol`.

By means of `DiagnosticProtocol.serviceTable` both “ends” of this aspect are put together and therefore it is reasonable to express a constraint about the value of attribute `protocolKind`.

**[constr\_1405] Value of `DiagnosticProtocol.serviceTable` vs. `DiagnosticServiceTable.protocolKind`** [If the reference `DiagnosticProtocol.serviceTable` exists then the value of `DiagnosticProtocol.protocolKind` shall be identical to the value of `DiagnosticServiceTable.protocolKind`.]()

**[TPS\_DEXT\_01006] The role of `DiagnosticServiceTables`** [The existence of a `DiagnosticServiceTable` creates a formal relation between a collection of `DiagnosticServiceInstances` and the `DiagnosticConnection` that formalizes a *conduit* for specific pairs of diagnostic request and response messages taken to transmit the diagnostic service invocations from a tester to the applicable instance of the AUTOSAR diagnostic stack and convey the response of the diagnostic stack back to the tester.

In particular, this means that a `DiagnosticServiceTable` describes the set of `DiagnosticServiceInstances` that are available via `DiagnosticConnection` which is finally a request message to address a diagnostic service to an ECU and a response message to be used by the ECU to respond to the service.]([RS\\_DEXT\\_00039](#))

<b>Class</b>	<b>DiagnosticConnection</b>			
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::DiagnosticConnection			
<b>Note</b>	DiagnosticConncection that is used to describe the relationship between several TP connections. <b>Tags:</b> atp.recommendedPackage=DiagnosticConnections			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
functional Request	TpConnectionIdent	*	ref	Reference to functional request messages.
periodic ResponseUudt	PduTriggering	*	ref	Reference to UUDT responses.
physical Request	TpConnectionIdent	0..1	ref	Reference to a physical request message.
response	TpConnectionIdent	0..1	ref	In the vast majority of cases a response is required. However, there are also cases where providing the response is not possible and/or not allowed.
responseOn Event	TpConnectionIdent	0..1	ref	Reference to a ROE message.

**Table 4.16: DiagnosticConnection**

Here is an example of a service table for UDS diagnostics:

**\$14** - GroupOfDTC: 0xFFFFFFFF

**\$19** - Subfunction: \$02, Subfunction \$06

**\$22** - DataID: 0x1111, DataID: 0x2222

**\$2E** - DataID: 0x1111, DataID: 0x2222

\$2F - IO-ID:0x3333

**[TPS\_DEXT\_01091] Relation between a `DiagnosticServiceTable` and one or more `DiagnosticConnections`** [In principle, the relation between a `DiagnosticServiceTable` and one or more `DiagnosticConnections` can be established in two possible ways:

- By means of the reference `DiagnosticServiceTable.diagnosticConnection`. This way, the concept of protocols and their priorities relative to each other is **not** considered.
- By means of the references `DiagnosticProtocol.diagnosticConnection` and `DiagnosticProtocol.serviceTable`. This way, the existence of several protocols and their priorities **is positively considered**.

]()

Please note that alternatives mentioned in [TPS\_DEXT\_01091] may or may not be handled as alternatives in actual projects. It may be possible that in a first modeling step protocols are ignored entirely and therefore the respective relations are created by means of `DiagnosticServiceTable.diagnosticConnection`.

Later in time and as the project progresses, protocols may become a thing and are consequently introduced in the model. In response to this change, the relation in question is now created by means of the references `DiagnosticProtocol.diagnosticConnection` and `DiagnosticProtocol.serviceTable`.

However, the existing relation created by means of the reference `DiagnosticServiceTable.diagnosticConnection` is not necessarily required to be removed. It may just as well continue to exist. However, in this case an obvious consistency rule as described in [constr\_1406] applies.

**[constr\_1406] `DiagnosticServiceTable.diagnosticConnection` vs. `DiagnosticProtocol.diagnosticConnection`** [If a `DiagnosticServiceTable` exists that fulfills the following conditions:

- reference `DiagnosticServiceTable.diagnosticConnection` exists
- the `DiagnosticServiceTable` is referenced by means of `DiagnosticProtocol.serviceTable`

then all of the `DiagnosticConnections` referenced by means of `DiagnosticServiceTable.diagnosticConnection` shall also be referenced in the role `diagnosticConnection` from a `DiagnosticProtocol` that in turn references the respective `DiagnosticServiceTable` in the role `DiagnosticProtocol.serviceTable`.]()

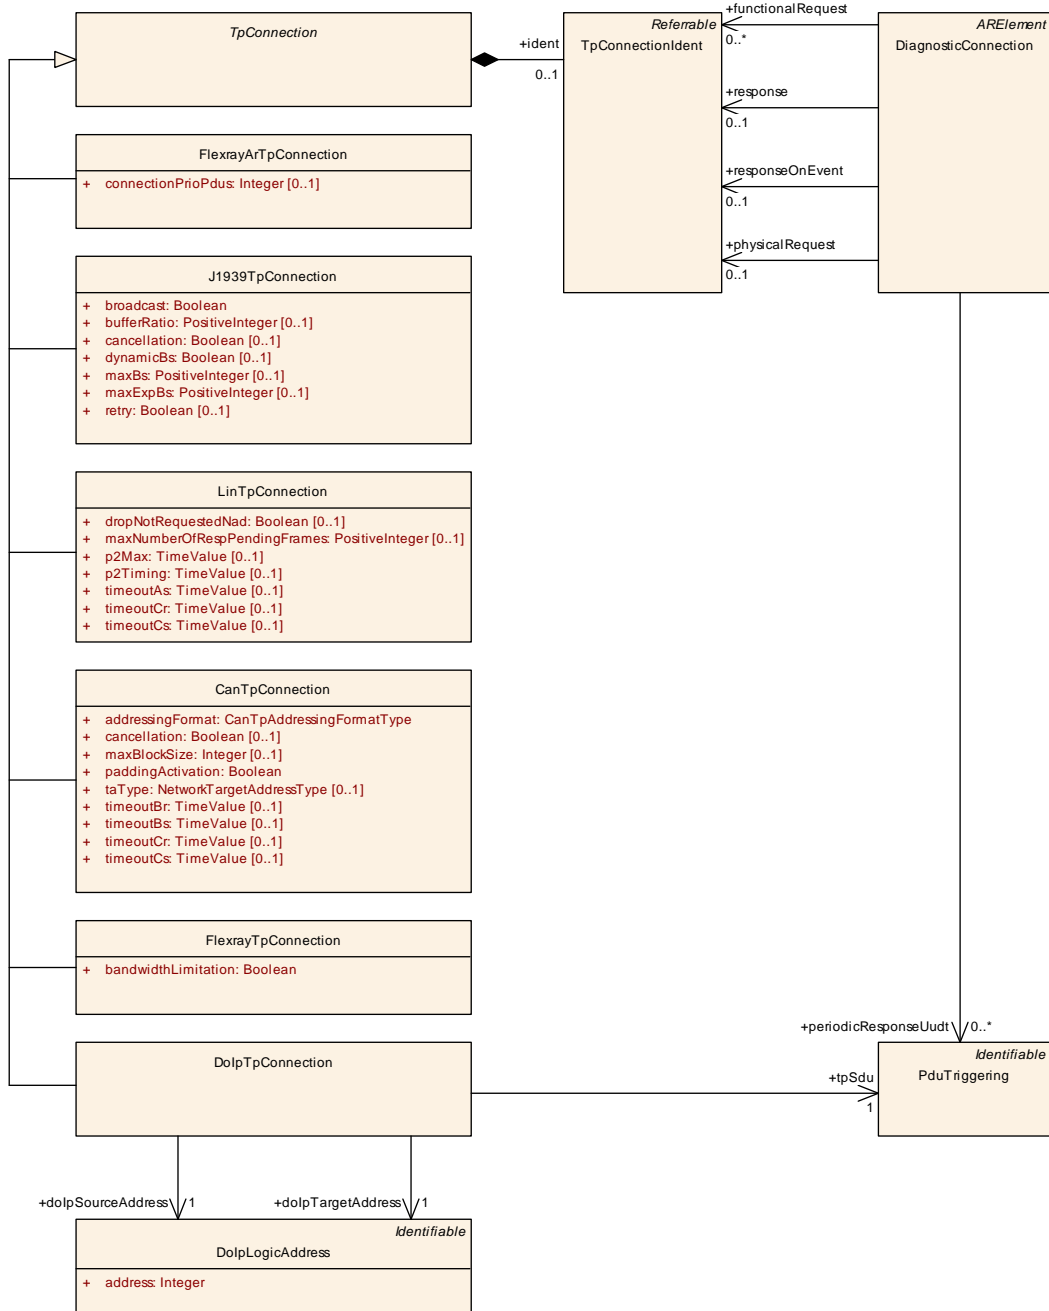

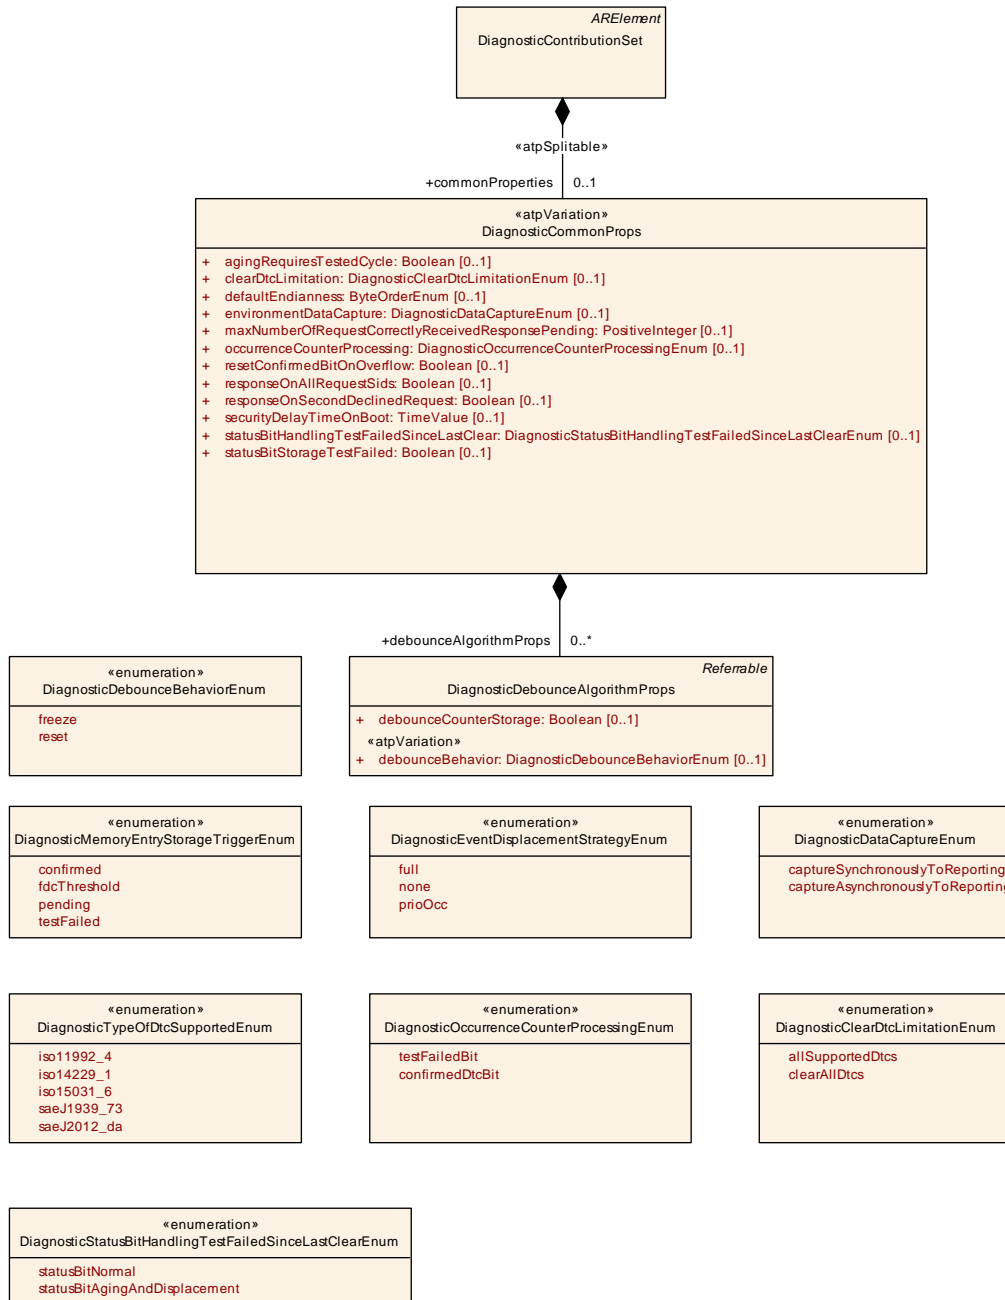

Figure 4.7: Modeling of DiagnosticConnection

## 4.6 Diagnostic Common Properties

[TPS\_DEXT\_01007] Common properties of a DiagnosticExtract [There are some properties of a DiagnosticExtract that are shared among all elements of the DiagnosticExtract. These properties are modeled by means of the meta-class DiagnosticCommonProps.](RS\_DEXT\_00001)

**Figure 4.8: Common Diagnostic Properties**

[TPS\_DEXT\_01008] **DiagnosticContributionSet** defines the scope for the application of the common diagnostic properties [DiagnosticContributionSet aggregates DiagnosticCommonProps and by this means defines the scope for the application of the common diagnostic properties.] (RS\_DEXT\_00001)

<b>Class</b>	<<atpVariation>> <b>DiagnosticCommonProps</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::DiagnosticCommonProps			
<b>Note</b>	This meta-class aggregates a number of common properties that are shared among a diagnostic extract. <b>Tags:</b> vh.latestBindingTime=codeGenerationTime			
<b>Base</b>	ARObject			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
agingRequiresTestedCycle	Boolean	0..1	attr	Defines whether the aging cycle counter is processed every aging cycles or else only tested aging cycle are considered.  If the attribute is set to TRUE: only tested aging cycle are considered for aging cycle counter.  If the attribute is set to FALSE: aging cycle counter is processed every aging cycle.
clearDtcLimitation	<a href="#">DiagnosticClearDtcLimitationEnum</a>	0..1	attr	Defines the scope of the DEM_ClearDTC Api.
debounceAlgorithmProps	<a href="#">DiagnosticDebounceAlgorithmProps</a>	*	aggr	Defines the used debounce algorithms relevant in the context of the enclosing DiagnosticCommonProps. Usually, there is a variety of debouncing algorithms to take into account and therefore the multiplicity of this aggregation is set to 0..*.
defaultEndianness	ByteOrderEnum	0..1	attr	Defines the default endianness of the data belonging to a DID or RID which is applicable if the DiagnosticDataElement does not define the endianness via the swDataDefProps.baseType attribute.
environmentDataCapture	<a href="#">DiagnosticDataCaptureEnum</a>	0..1	attr	This attribute determines whether the capturing of environment data is done synchronously inside the report API function or whether the capturing shall be done asynchronously, i.e. after the report API function already terminated.
maxNumberOfRequestCorrectlyReceivedResponsePending	PositiveInteger	0..1	attr	Maximum number of negative responses with response code 0x78 (requestCorrectlyReceived-ResponsePending) allowed per request. DCM will send a negative response with response code 0x10 (generalReject), in case the limit value gets reached. Value 0xFF means that no limit number of NRC 0x78 response apply.
occurrenceCounterProcessing	<a href="#">DiagnosticOccurrenceCounterProcessingEnum</a>	0..1	attr	This attribute defines the consideration of the fault confirmation process for the occurrence counter.
resetConfirmedBitOnOverflow	Boolean	0..1	attr	This attribute defines, whether the confirmed bit is reset or not while an event memory entry will be displaced.
responseOnAllRequestSids	Boolean	0..1	attr	If set to FALSE the DCM will not respond to diagnostic request that contains a service ID which is in the range from 0x40 to 0x7F or in the range from 0xC0 to 0xFF (Response IDs).
responseOnSecondDeclinedRequest	Boolean	0..1	attr	Defines the reaction upon a second request (ClientB) that can not be processed (e.g. due to priority assessment).  TRUE: when the second request (Client B) can not be processed, it shall be answered with NRC21 BusyRepeat Request.  FALSE: when the second request (Client B) can not be processed, it shall not be responded.
securityDelayTimeOnBoot	TimeValue	0..1	attr	Start delay timer on power on in seconds.  This delay indicates the time at ECU boot power-on time where the Dcm remains in the default session and does not accept a security access.

<b>Class</b>	<<atpVariation>> <b>DiagnosticCommonProps</b>			
statusBit HandlingTest FailedSinceLast Clear	DiagnosticStatusBit HandlingTestFailed SinceLastClearEnum	0..1	attr	This attribute defines, whether the aging and displacement mechanism shall be applied to the "Test FailedSinceLastClear" status bits.
statusBit StorageTest Failed	Boolean	0..1	attr	This parameter is used to activate/deactivate the permanent storage of the "TestFailed" status bits. true: storage activated false: storage deactivated

**Table 4.17: DiagnosticCommonProps**

## 5 Diagnostic Services

### 5.1 Introduction

The meta-model for the diagnostic services according to AUTOSAR, to a large degree, takes over aspects of the description of diagnostic services according to the definition of *Unified Diagnostic Services* (UDS) as of ISO 14229 [16].

### 5.2 Service Instance vs. Service Class

When it comes to diagnostic services, the meta-model distinguishes between the concept of a diagnostic service *instance* vs. the concept of a diagnostic service *class*.

As the terminology suggests, the diagnostic service *instance* (formalized as `DiagnosticServiceInstance`) implements a concrete use of a diagnostic service in a given context whereas purpose of the diagnostic service *class* (formalized as `DiagnosticServiceClass`) is to provide properties that are shared among all existing diagnostic service *instances* in the model.

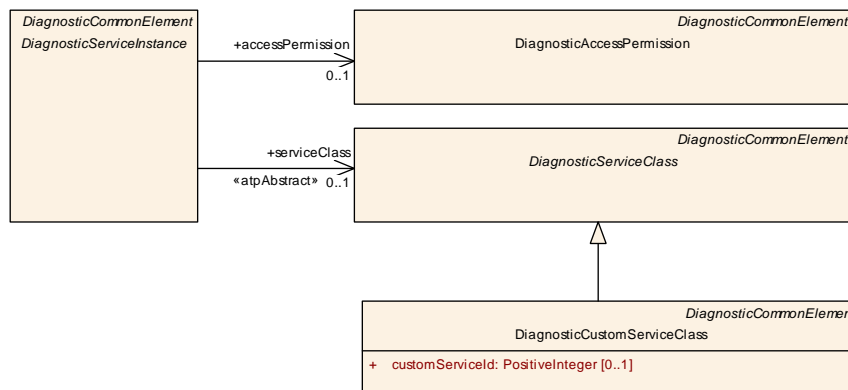

Figure 5.1: Common service elements

**[constr\_1329] Existence of concrete sub-classes of `DiagnosticServiceClass` in the context created by a `DiagnosticContributionSet`** [One of the following mutually exclusive conditions shall apply for the existence of any concrete sub-class of `DiagnosticServiceClass` in the context created by a `DiagnosticContributionSet`:

- The subclass of `DiagnosticServiceClass` shall only appear once in the context created by a `DiagnosticContributionSet`
- If the subclass of `DiagnosticServiceClass` appears multiple times in the context created by a `DiagnosticContributionSet` then all instances shall have identical values for all of their attributes.

In case of aggregations the number of aggregated elements shall be identical and the values of primitive attributes of aggregated elements shall again be identical.

]0

The background of [constr\_1329] is obviously related to the semantics of `DiagnosticServiceClass` which is to define model attributes that are shared among all `DiagnosticServiceInstances`.

This would not be possible if more than one `DiagnosticServiceClass` with a diverging set of attribute values exists.

<b>Class</b>	<i>DiagnosticServiceClass</i> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::CommonService			
<b>Note</b>	This meta-class provides the ability to define common properties that are shared among all instances of sub-classes of <code>DiagnosticServiceInstance</code> .

customServiceClass	<a href="#">DiagnosticCustomServiceClass</a>	0..1	ref	Reference to the corresponding DiagnosticCustomServiceClass.

**Table 5.3: DiagnosticCustomServiceInstance**

**[constr\_1330] Custom service identifier shall not overlap with standardized service identifiers** [The value of the attribute `customServiceId` shall not be set to any of the values reserved for standardized service identifiers as defined by the ISO 14229-1, see [16].]()

Class		DiagnosticCustomServiceClass		
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::CommonService			
<b>Note</b>	This represents the ability to define a custom diagnostic service class and assign an ID to it. Further configuration is not foreseen from the point of view of the diagnostic extract and consequently needs to be done on the level of ECUC. <b>Tags:</b> atp.recommendedPackage=DiagnosticCustomServiceClasses			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceClass</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
Attribute	Type	Mult.	Kind	Note
customServiceId	PositiveInteger	0..1	attr	This attribute may only be used for the definition of custom services. The values shall not overlap with existing standardized service IDs.

**Table 5.4: DiagnosticCustomServiceClass**

## 5.3 Access Permission, Session, Security Level

This chapter discusses a set of meta-classes that have been created to represent the concept of an *access permission* used in the context of the `Dcm`.

### 5.3.1 Introduction to Access Permission

The `DiagnosticAccessPermission` is used to describe the ability (or the lack thereof) to execute a diagnostic service depending on the referenced `DiagnosticSecurityLevel` and `DiagnosticSession` (see Figure 5.3).

At runtime, `DiagnosticSessions` are used to create a context for the execution of diagnostic functionality. Servers usually support a variety of different `DiagnosticSessions`. It is possible to switch between `DiagnosticSessions` at runtime.

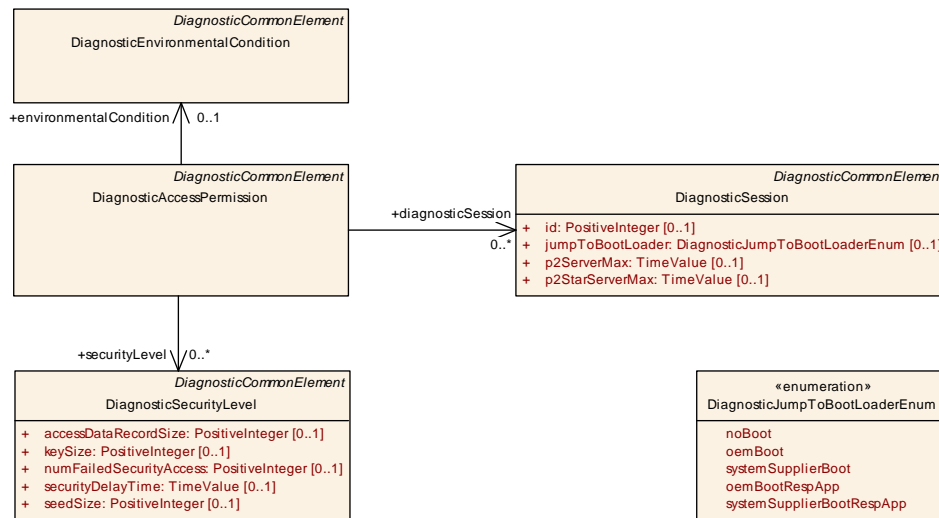

Figure 5.3: Common model elements relevant for the Dcm

[TPS\_DEXT\_01139] Semantics of the references from **DiagnosticAccessPermission** [The semantics of the references from **DiagnosticAccessPermission** to

- **DiagnosticSession** in the role **diagnosticSession**
- **DiagnosticSecurityLevel** in the role **securityLevel**
- **DiagnosticEnvironmentalCondition** in the role **environmentalCondition**

in terms of how access permission is granted is subject to the specification of the Dcm [10].] ([RS\\_DEXT\\_00040](#))

[TPS\_DEXT\_01011] Semantics of **DiagnosticSession.id** [The value of the attribute **DiagnosticSession.id** has a given semantics according to ISO 14229-1 [16]. For the sake of completeness, the dedicated values of **DiagnosticSession.id** are:

**0x01** This represents the *default session*. This session has a specific semantics in the context of diagnostics communication such that e.g. any diagnostic service that is supposed to execute in the *default session* cannot require any reference to a **DiagnosticSecurityLevel**.

**0x02** This represents the *programming session*.

**0x03** This represents the *extended diagnostic session*.

**0x04** This represents the *safety system diagnostic session*.

The value range **0x40 .. 0x5F** is reserved for manufacturer-specific use.] ([RS\\_DEXT\\_00040](#))

<b>Class</b>	<b>DiagnosticSecurityLevel</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm			
<b>Note</b>	This meta-class represents the ability to define a security level considered for diagnostic purposes. <b>Tags:</b> atp.recommendedPackage=DiagnosticSecurityLevels			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">Multilanguage</a> <a href="#">Referrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
accessDataRecordSize	PositiveInteger	0..1	attr	This represents the size of the AccessDataRecord used in GetSeed. Unit:byte.
keySize	PositiveInteger	0..1	attr	This represents the size of the security key. Unit: byte.
numFailedSecurityAccess	PositiveInteger	0..1	attr	This represents the number of failed security accesses after which the delay time is activated.
securityDelayTime	TimeValue	0..1	attr	This represents the delay time after a failed security access. Unit: second.
seedSize	PositiveInteger	0..1	attr	This represents the size of the security seed. Unit: byte.

**Table 5.5: DiagnosticSecurityLevel**

**[TPS\_DEXT\_01012] Rationale for the modeling of the multiplicity of [DiagnosticAccessPermission.securityLevel](#)** [The multiplicity of [DiagnosticAccessPermission.securityLevel](#) has been set to 0..\* with the following motivation:

- The [DiagnosticSession](#) where the attribute [DiagnosticSession.id](#) is set to 0x01 shall **not** be associated with a [DiagnosticSecurityLevel](#).
- There are no associated [DiagnosticSecurityLevels](#) required. As a consequence, the execution of the [DiagnosticServiceInstance](#) that references the given [DiagnosticAccessPermission](#) is always possible.

] ([RS\\_DEXT\\_00041](#), [RS\\_DEXT\\_00042](#))

**[TPS\_DEXT\_01070] Description of textually semi-formal formulated pre- and run-conditions for the validity of [DiagnosticAccessPermission](#)** [AUTOSAR supports the description of textually formulated semi-formal pre- and run-conditions for the validity of [DiagnosticAccessPermission](#).

This can be done by means of the attribute [DiagnosticAccessPermission.introduction.structuredReq](#).]()

For more details regarding the modeling of the semi-formal text please refer to Figure 4.3. An example of how the definition of pre- and run-conditions may look like in ARXML is sketched in listing 5.1.

To make this approach work it is important to standardize possible values of the attribute [category](#) such that the semi-formal semantics of the definition of pre- and run-conditions is protected by regulation of the AUTOSAR standard.

**[TPS\_DEXT\_01071] Standardized values of [DiagnosticAccessPermission.introduction.structuredReq](#)** [The following possible values of [DiagnosticAccessPermission.introduction.structuredReq](#) are standardized by AUTOSAR:

- **DIAG\_ACCESS\_PERM\_PRE\_COND**: this value describes the pre-condition of the corresponding [DiagnosticAccessPermission](#).
- **DIAG\_ACCESS\_PERM\_RUN\_COND**: this value describes the run-condition of the corresponding [DiagnosticAccessPermission](#).

|(RS\_DEXT\_00041, RS\_DEXT\_00045)

<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm
<b>Note</b>	This enumeration contains the options for jumping to a boot loader.
<b>Literal</b>	<b>Description</b>

Enumeration	DiagnosticJumpToBootLoaderEnum
noBoot	This diagnostic session doesn't allow to jump to Bootloader. <b>Tags:</b> atp.EnumerationLiteralIndex=0
oemBoot	This diagnostic session allows to jump to OEM Bootloader. In this case the bootloader send the final response. <b>Tags:</b> atp.EnumerationLiteralIndex=1
oemBootRespApp	This diagnostic session allows to jump to OEM Bootloader and application sends final response. <b>Tags:</b> atp.EnumerationLiteralIndex=3
systemSupplierBoot	This diagnostic session allows to jump to System Supplier Bootloader. In this case the bootloader send the final response. <b>Tags:</b> atp.EnumerationLiteralIndex=2
systemSupplierBootRespApp	This diagnostic session allows to jump to System Supplier Bootloader and application sends final response. <b>Tags:</b> atp.EnumerationLiteralIndex=4

**Table 5.8: DiagnosticJumpToBootLoaderEnum**

## 5.4 Environmental Conditions for the Execution of Diagnostic Services

In some cases, diagnostic functionality can only be executed if the vehicle is in a (safe) state that allows for the respective diagnostics function. For example, one such condition is that the vehicle is not driving, i.e. vehicle speed == 0.

The meta-class [DiagnosticEnvironmentalCondition](#) formalizes the idea of a condition which is evaluated during runtime of the ECU by looking at “environmental” states (such as the mentioned vehicle speed).

[DiagnosticEnvironmentalConditions](#) are based on the active modes in the application software or basic software or by comparison of [DiagnosticDataElements](#) with constant values. Atomic conditions can be combined by logical operations to form more complex conditions.

Please note that it is possible to create a nested hierarchy (of arbitrary depth) of [DiagnosticEnvConditionFormula](#). This modeling is supported by the fact that [DiagnosticEnvConditionFormula](#) inherits from and, at the same time, aggregates [DiagnosticEnvConditionFormulaPart](#).

[For each [DiagnosticEnvironmentalCondition](#), the aggregation of [DiagnosticEnvConditionFormula](#) in the role `formula` shall exist at the time when the DEXT is complete.]()

### 5.4.1 Environmental Condition Formula

The core part of a [DiagnosticEnvironmentalCondition](#) is the [DiagnosticEnvConditionFormula](#).

<b>Class</b>	<b>DiagnosticEnvConditionFormula</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition			
<b>Note</b>	<p>A DiagnosticEnvConditionFormula embodies the computation instruction that is to be evaluated at runtime to determine if the DiagnosticEnvironmentalCondition is currently present (i.e. the formula is evaluated to true) or not (otherwise). The formula itself consists of parts which are combined by the logical operations specified by DiagnosticEnvConditionFormula.op.</p> <p>If a diagnostic functionality cannot be executed because an environmental condition fails then the diagnostic stack shall send a negative response code (NRC) back to the client. The value of the NRC is directly related to the specific formula and is therefore formalized in the attribute DiagnosticEnvConditionFormula.nrcValue.</p>			
<b>Base</b>	ARObject, <a href="#">DiagnosticEnvConditionFormulaPart</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
nrcValue	PositiveInteger	0..1	attr	This attribute represents the concrete NRC value that shall be returned if the condition fails.
op	<a href="#">DiagnosticLogicalOperatorEnum</a>	0..1	attr	This attribute represents the concrete operator (supported operators: and, or) of the condition formula.
part (ordered)	<a href="#">DiagnosticEnvConditionFormulaPart</a>	*	aggr	This aggregation represents the collection of formula parts that can be combined by logical operators.

**Table 5.10: DiagnosticEnvConditionFormula**

**[constr\_1800] Existence of [DiagnosticEnvConditionFormula.op](#)** [For each [DiagnosticEnvConditionFormula](#), that attribute `op` shall exist **at the time when the DEXT is complete.** ]()

<b>Enumeration</b>	<b>DiagnosticLogicalOperatorEnum</b>
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition
<b>Note</b>	Logical AND and OR operation (&&,   )
<b>Literal</b>	<b>Description</b>
logicalAnd	<p>Logical AND</p> <p><b>Tags:</b>atp.EnumerationLiteralIndex=0</p>
logicalOr	<p>Logical OR</p> <p><b>Tags:</b>atp.EnumerationLiteralIndex=1</p>

**Table 5.11: DiagnosticLogicalOperatorEnum**

**[TPS\_DEXT\_01113] Evaluation of a [DiagnosticEnvConditionFormula](#)** [A [DiagnosticEnvConditionFormula](#) embodies the computation instruction that is to be evaluated at runtime to determine if the [DiagnosticEnvironmentalCondition](#) is currently present (i.e. the formula is evaluated to `true`) or not (otherwise).

The [DiagnosticEnvConditionFormula](#) itself consists of `parts` which are combined by the logical operations represented by the attribute `op`.] ([RS\\_DEXT\\_00079](#))

<b>Class</b>	<i>DiagnosticEnvConditionFormulaPart</i> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition			
<b>Note</b>	A DiagnosticEnvConditionFormulaPart can either be a atomic condition, e.g. a DiagnosticEnvCompareCondition, or a DiagnosticEnvConditionFormula, again, which allows arbitrary nesting.			
<b>Base</b>	ARObject			
<b>Subclasses</b>	<a href="#">DiagnosticEnvCompareCondition</a> , <a href="#">DiagnosticEnvConditionFormula</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
-	-	-	-	-

**Table 5.12: DiagnosticEnvConditionFormulaPart**

[TPS\_DEXT\_01114] **DiagnosticEnvConditionFormula that has no parts** [A [DiagnosticEnvConditionFormula](#) that has no `parts` shall be evaluated to false. This rule shall apply independently of the value of [DiagnosticEnvConditionFormula.op.](#)] ([RS\\_DEXT\\_00079](#))

[TPS\_DEXT\_01115] **DiagnosticEnvConditionFormula that has one part** [A [DiagnosticEnvConditionFormula](#) that has one `part` shall be evaluated to the evaluation result of this part. This rule shall apply independently of the value of [DiagnosticEnvConditionFormula.op.](#)] ([RS\\_DEXT\\_00079](#))

[TPS\_DEXT\_01116] **DiagnosticEnvConditionFormula that has more than one part** [The evaluation result of a [DiagnosticEnvConditionFormula](#) with more than one `part` shall be calculated by combining the results of the `parts` with the logical Operation specified by [DiagnosticEnvConditionFormula.op.](#)

The evaluation shall be done in a “short-cut” manner, i.e. following the rules for the evaluation of the logical operators in C.

The consequences of this approach are:

- The `parts` shall be evaluated in the specified order starting at the first element. This is why the aggregation of `part` is decorated by the `ordered` qualifier.
- after the evaluation of each `part` a check shall be executed if it is still possible that the evaluation of the remaining `parts` (to `true` or `false`) could change the overall result.
- As soon as a change of the overall result is no longer possible, i.e. any of the following conditions evaluates to `false`:
  - there are no `parts` left
  - the current `part` was evaluated to `false` and `DiagnosticEnvConditionFormula.op == DiagnosticLogicalOperatorEnum.logicalAnd`
  - the current `part` was evaluated to `true` and `DiagnosticEnvConditionFormula.op == DiagnosticLogicalOperatorEnum.logicalOr`

the evaluation of the `parts` shall be finalized and the evaluation result of the current `part` shall be considered the overall evaluation result of the formula.

Regarding the strategy for returning NRC values please refer to the specification of the SWS Dcm [10].

](RS\_DEXT\_00079)

**[TPS\_DEXT\_01117] Semantics of DiagnosticEnvConditionFormula.nrcValue** [If a diagnostic functionality cannot be executed because an environmental condition fails, i.e. the formula is evaluated to false, then the diagnostic stack shall send an optional negative response code (NRC) back to the client (if it is present).

If no value for NRC is defined then a pre-defined NRC value as defined in the SWS Dcm [10] will be sent back. The value of the NRC is directly related to the specific DiagnosticEnvConditionFormula and is therefore formalized in the attribute DiagnosticEnvConditionFormula.nrcValue.](RS\_DEXT\_00079)

**[constr\_1464] Allowed value range of DiagnosticEnvConditionFormula.nrcValue** [The value of attribute DiagnosticEnvConditionFormula.nrcValue shall be limited to the interval [1..255].]()

The rationale for the existence of [constr\_1464] is provided by ISO 14229-1 [16].

## 5.4.2 Atomic Conditions

Atomic conditions in the context of a DiagnosticEnvConditionFormula are described by means of meta-class DiagnosticEnvCompareConditions. The formulation of DiagnosticEnvCompareConditions is based on the idea of a comparison at runtime of some variable data with a constant value.

The actual type of the comparison (==, !=, <, <=, ...) is specified by means of the attribute DiagnosticEnvCompareCondition.compareType.

<b>Class</b>	<i>DiagnosticEnvCompareCondition</i> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition			
<b>Note</b>	DiagnosticCompareConditions are atomic conditions. They are based on the idea of a comparison at runtime of some variable data with something constant. The type of the comparison (==, !=, <, <=, ...) is specified in DiagnosticCompareCondition.compareType.			
<b>Base</b>	ARObject, <i>DiagnosticEnvConditionFormulaPart</i>			
<b>Subclasses</b>	<i>DiagnosticEnvDataCondition</i> , <i>DiagnosticEnvModeCondition</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
compareType	DiagnosticCompareTypeEnum	1	attr	This attributes represents the concrete type of the comparison.

**Table 5.13: DiagnosticEnvCompareCondition**

**[constr\_1801] Existence of DiagnosticEnvCompareCondition.compareType** [For each DiagnosticEnvCompareCondition, that attribute compareType shall exist at the time when the DEXT is complete.]()

<i>Enumeration</i>	<b>DiagnosticCompareTypeEnum</b>
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition
<b>Note</b>	Enumeration for the type of a comparison of values usually expressed by the following operators: ==, !=, <, <=, >, >=
<i>Literal</i>	<i>Description</i>
isEqual	equal <b>Tags:</b> atp.EnumerationLiteralIndex=0
isGreaterOrEqual	greater than or equal <b>Tags:</b> atp.EnumerationLiteralIndex=5

isLessOrEqual	less than or equal <b>Tags:</b> atp.EnumerationLiteralIndex=3
isLessThan	less than <b>Tags:</b> atp.EnumerationLiteralIndex=2
isNotEqual	not equal <b>Tags:</b> atp.EnumerationLiteralIndex=1

**Table 5.14: DiagnosticCompareTypeEnum**

[DiagnosticEnvCompareCondition](#) is an abstract meta-class that acts as a base class for two concrete meta-classes designed to handle different operand types.

The specific sub-classes (the details are explained in sections [5.4.2.1](#) and [5.4.2.2](#)) of [DiagnosticEnvCompareCondition](#) support a different set of attributes of [DiagnosticCompareTypeEnum](#) for setting the value of attribute [compareType](#).

### 5.4.2.1 Data Condition

**[TPS\_DEXT\_01118] Semantics of [DiagnosticEnvDataCondition](#)** [The meta-class [DiagnosticEnvDataCondition](#) represents an atomic condition that compares the current value of the referenced [DiagnosticDataElement](#) with a constant value defined by the [ValueSpecification](#) aggregated in the role [compareValue](#).] ([RS\\_DEXT\\_00079](#))

**[constr\_1465] Allowed values of [compareType](#) in the context of a [DiagnosticEnvDataCondition](#)** [Within the context of a [DiagnosticEnvDataCondition](#) all values of [DiagnosticCompareTypeEnum](#) are supported for the inherited attribute [compareType](#).]()

<b>Class</b>	<b>DiagnosticEnvDataCondition</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition			
<b>Note</b>	A DiagnosticEnvDataCondition is an atomic condition that compares the current value of the referenced DiagnosticDataElement with a constant value defined by the ValueSpecification. All compareTypes are supported.			
<b>Base</b>	ARObject, <a href="#">DiagnosticEnvCompareCondition</a> , <a href="#">DiagnosticEnvConditionFormulaPart</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
compareValue	<a href="#">ValueSpecification</a>	0..1	aggr	This attribute represents a fixed compare value taken to evaluate the compare condition.
dataElement	<a href="#">DiagnosticDataElement</a>	0..1	ref	This reference represents the related diagnostic data element.

**Table 5.15: DiagnosticEnvDataCondition**

**[constr\_1802] Existence of [DiagnosticEnvDataCondition.compareValue](#)** [For each [DiagnosticEnvDataCondition](#), that attribute [compareValue](#) shall exist at the time when the DEXT is complete.] ()

**[constr\_1803] Existence of [DiagnosticEnvDataCondition.dataElement](#)** [For each [DiagnosticEnvDataCondition](#), that attribute [dataElement](#) shall exist at the time when the DEXT is complete.] ()

#### 5.4.2.2 Mode Condition

**[TPS\_DEXT\_01119] Semantics of [DiagnosticEnvModeCondition](#)** [The meta-class [DiagnosticEnvModeCondition](#) represents an atomic condition that compares the current value of the referenced [ModeDeclarationGroupPrototype](#) with the value of a [ModeDeclaration](#) taken as the reference value.] ([RS\\_DEXT\\_00079](#))

The concrete modeling of this aspect is sketched in Figure [D.4](#).

Please note that the [ModeDeclarationGroupPrototype](#) as well as the applicable [ModeDeclaration](#) are both referenced in the concrete modeling of the attribute [DiagnosticEnvSwcModeElement.mode](#).

The idea behind this modeling approach (for more information, please refer to Figure [D.4](#)) is that the [ModeDeclaration](#) can only be a member of the specific [ModeDeclarationGroup](#) taken to type the respective [ModeDeclarationGroupPrototype](#) anyway.

Admittedly, this relation could be expressed by means of two references and a formal constraint or it could be expressed by way of a **single** reference that's implying an interpreting of the model in a specific way. AUTOSAR opts for the latter alternative, which is detailed by [\[TPS\\_DEXT\\_01120\]](#).

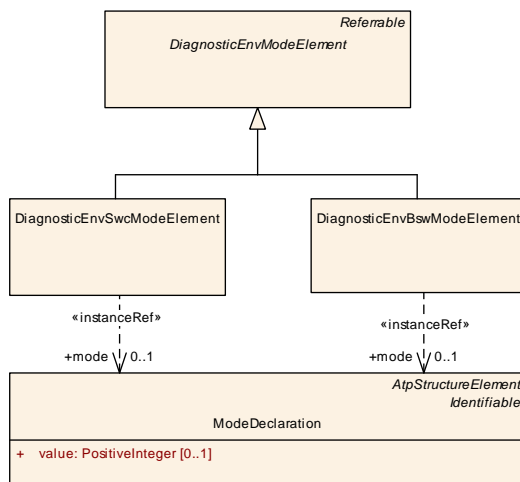

Figure 5.5: Specializations of `DiagnosticEnvModeElement`

[TPS\_DEXT\_01120] Comparison of the value of a `ModeDeclarationGroupPrototype` with a `ModeDeclaration` [For the comparison of the value of a `ModeDeclarationGroupPrototype` with a `ModeDeclaration`, two alternatives apply, depending on whether mode condition is executed in application software (swc) or basic software (bsw):

- The `ModeDeclarationGroupPrototype` referenced in the role `DiagnosticEnvSwcModeElement.mode.contextModeDeclarationGroup` shall be compared to the `ModeDeclaration` referenced in the role `DiagnosticEnvSwcModeElement.mode.targetMode`.
- The `ModeDeclarationGroupPrototype` referenced in the role `DiagnosticEnvBswModeElement.mode.contextModeDeclarationGroup` shall be compared to the `ModeDeclaration` referenced in the role `DiagnosticEnvBswModeElement.mode.targetMode`.

](RS\_DEXT\_00079)

Please note that the two alternatives mentioned in [TPS\_DEXT\_01120] are described in Figure 5.5.

[constr\_1466] Allowed values of `compareType` in the context of a `DiagnosticEnvModeCondition` [Within the context of a `DiagnosticEnvDataCondition` only a subset of the values of `DiagnosticCompareTypeEnum` is supported for the inherited attribute `compareType`, namely:

- `DiagnosticCompareTypeEnum.isEqual`
- `DiagnosticCompareTypeEnum.isNotEqual`

]()

**[constr\_1467] References in `DiagnosticEnvModeCondition`** [In a `DiagnosticEnvModeCondition` the reference `modeElement` shall only point to a `DiagnosticEnvModeElement` that is aggregated inside the same `DiagnosticEnvironmentalCondition` as the `DiagnosticEnvModeCondition` itself.]()

Please note that the main benefit of the existence of the dedicated meta-class `DiagnosticEnvModeElement` is to keep the (serialized) model clean. Given the fulfillment of [constr\_1467], the potentially lengthy `InstanceRef` for identifying the operands of a mode comparison does not (if applicable) have to be repeated but can be reused multiple times in the context of the enclosing `DiagnosticEnvironmentalCondition`.

<b>Class</b>	<b>DiagnosticEnvModeCondition</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition			
<b>Note</b>	<p>DiagnosticEnvModeCondition are atomic condition based on the comparison of the active Mode Declaration in a ModeDeclarationGroupPrototype with the constant value of a ModeDeclaration.</p> <p>The formulation of this condition uses only one DiagnosticEnvElement, which contains enough information to deduce the variable part (i.e. the part that changes at runtime) as well as the constant part of the comparison.</p> <p>Only DiagnosticCompareTypeEnum.isEqual or DiagnosticCompareTypeEnum.isNotEqual are eligible values for DiagnosticAtomicCondition.compareType.</p>			
<b>Base</b>	ARObject, <a href="#">DiagnosticEnvCompareCondition</a> , <a href="#">DiagnosticEnvConditionFormulaPart</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
modeElement	<a href="#">DiagnosticEnvModeElement</a>	0..1	ref	This reference represents both the ModeDeclaration GroupPrototype and the ModeDeclaration relevant for the mode comparison.

**Table 5.16: DiagnosticEnvModeCondition**

**[constr\_1804] Existence of `DiagnosticEnvModeCondition.modeElement`** [For each `DiagnosticEnvModeCondition`, that attribute `modeElement` shall exist at the time when the DEXT is complete.]()

<b>Class</b>	<b>DiagnosticEnvModeElement</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition			
<b>Note</b>	<p>All ModeDeclarations that are referenced in a DiagnosticEnvModeCondition shall be defined as a DiagnosticEnvModeElement of this DiagnosticEnvironmentalCondition.</p> <p>This concept keeps the ARXML clean: It avoids that the DiagnosticEnvConditionFormula is cluttered by lengthy InstanceRef definitions.</p> <p>Furthermore, it allows that an InstanceRef only needs to be defined once and can be used multiple times in the different DiagnosticEnvModeConditions.</p>			
<b>Base</b>	ARObject, <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">DiagnosticEnvBswModeElement</a> , <a href="#">DiagnosticEnvSwcModeElement</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

## 5.5 Diagnostic Services supported by AUTOSAR

The following sub-chapters describe the modeling of the collection of relevant diagnostic services as defined in the ISO 14229-1 [16]. This means that the definition of the AUTOSAR [DiagnosticExtract](#) does not explicitly support the total collection of diagnostic services as defined by [16].

Some diagnostic services compiled in this document define so-called sub-functions that need to be identified to fully specify the nature of the respective diagnostic service.

**[TPS\_DEXT\_01045] Supported diagnostic services** [The table 5.20 shows the UDS services supported by the [DiagnosticExtract](#).] ([RS\\_DEXT\\_00003](#), [RS\\_DEXT\\_00004](#), [RS\\_DEXT\\_00005](#), [RS\\_DEXT\\_00006](#), [RS\\_DEXT\\_00007](#), [RS\\_DEXT\\_00008](#),

*(RS\_DEXT\_00009, RS\_DEXT\_00010, RS\_DEXT\_00011, RS\_DEXT\_00012, RS\_DEXT\_00013, RS\_DEXT\_00014, RS\_DEXT\_00015, RS\_DEXT\_00016, RS\_DEXT\_00017, RS\_DEXT\_00018, RS\_DEXT\_00019, RS\_DEXT\_00020, RS\_DEXT\_00021, RS\_DEXT\_00022)*

**Table 5.20: Supported diagnostic services**

**[TPS\_DEXT\_01013] Specification of sub-functions by means of attribute `DiagnosticServiceInstance.category`** [

In all cases where a diagnostic service defines a sub-function according to ISO 14229-1 [16], the value of the attribute `category` of the applicable sub-class of `DiagnosticServiceInstance` can be used to specify the applicable sub-function as a textual token.

Constraints are defined to clarify the existence of standardized values of the attribute `category` for the given sub-function. This implies that an instance of the given sub-class of `DiagnosticServiceInstance` only has a single sub-function at a time.] (*RS\_DEXT\_00049, RS\_DEXT\_00051*)

**[TPS\_DEXT\_01014] Possible values of the `category` attribute for diagnostic services** [AUTOSAR claims the right to standardize the possible values of the attribute `category` for given diagnostic services.] (*RS\_DEXT\_00001, RS\_DEXT\_00051*)

If applicable, AUTOSAR allows for the usage of values of the attribute `category` other than the standardized values.

In this case, however, proprietary values of the attribute `category` shall be prefixed with a company-specific name fragment in order to avoid collisions that could occur if or when the list of possible values claimed by the AUTOSAR standard itself is extended. Example:

**Listing 5.2: Example for the definition of a custom `category`**

### 5.5.1 DataByIdentifier

This chapter describes the modeling of diagnostic services `ReadDataByIdentifier` (0x22) and `WriteDataByIdentifier` (0x2E).

The purpose of this diagnostic service is to enable a tester to request the values of data records from the AUTOSAR diagnostics stack. The data records are identified by a formally modeled `DiagnosticDataIdentifier`.

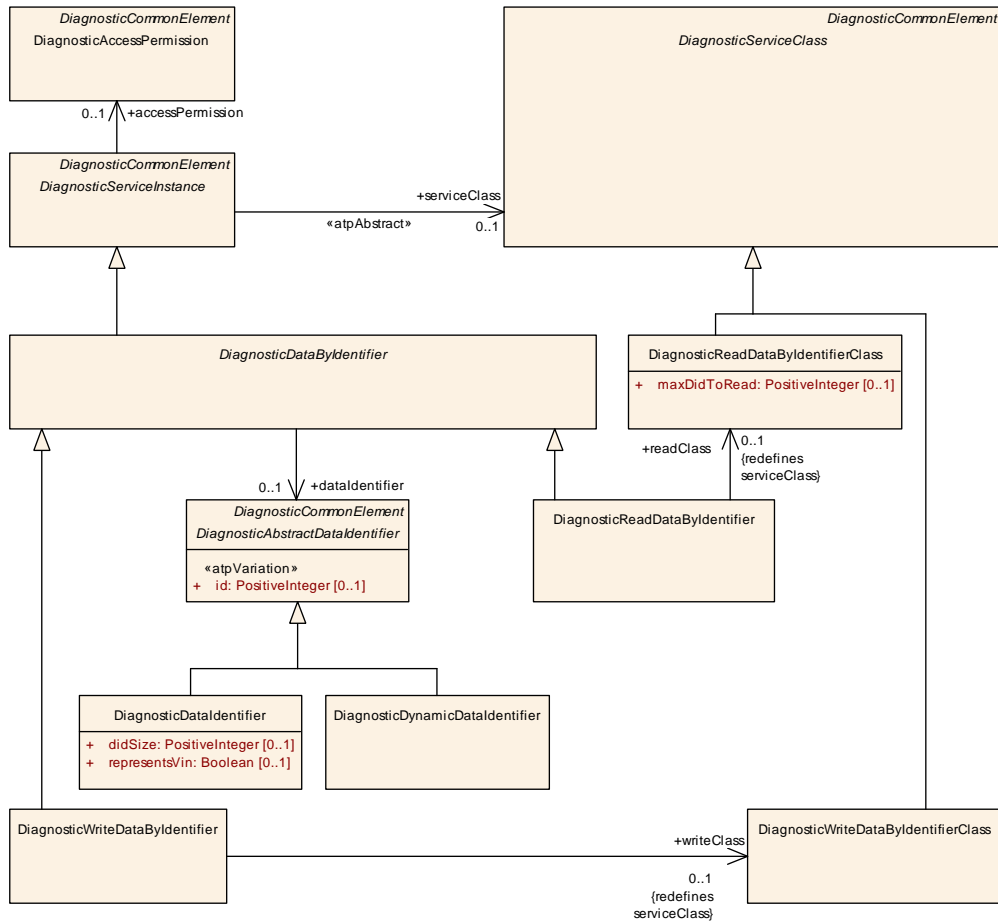

The modeling of this diagnostic service comprises the two meta-classes `DiagnosticReadDataByIdentifier` and `DiagnosticWriteDataByIdentifier`. These meta-classes both need to specify the set of `DiagnosticDataIdentifiers` and the set of applicable `DiagnosticAccessPermissions`.

As these properties are shared between instances of `DiagnosticReadDataByIdentifier` and `DiagnosticWriteDataByIdentifier`, an abstract base class named `DiagnosticDataByIdentifier` has been created that provides the actual references to `DiagnosticDataIdentifier` and `DiagnosticAccessPermission`.

**[TPS\_DEXT\_01054] Existence of `DiagnosticDataByIdentifier.dataIdentifier`** [The configuration of a given `DiagnosticDataByIdentifier` is considered incomplete until the reference in the role `DiagnosticDataByIdentifier.dataIdentifier` exists.] (*RS\_DEXT\_0007*, *RS\_DEXT\_00013*, *RS\_DEXT\_00034*)

The meaning of [TPS\_DEXT\_01054] is that the reference may be missing in intermediate steps of the configuration work flow. But at the point in time when ECU configuration is generated from the `DiagnosticExtract` the reference is needed to be able to make sense of the model for the given `DiagnosticDataByIdentifier`.

The ability to read multiple DIDs at run-time is controlled via attribute `DiagnosticReadDataByIdentifierClass.maxDidToRead` and therefore it is sufficient to (at configuration-time) limit the multiplicity of attribute `dataIdentifier` to 1.

**Figure 5.6: Modeling of diagnostic services ReadDataByIdentifier (0x22) and WriteDataByIdentifier (0x2E)**

Please note that the reference `DiagnosticDataByIdentifier.dataIdentifier` goes to `DiagnosticAbstractDataIdentifier`. This modeling approach allows to actually reference any of the meta-classes that inherit from `DiagnosticAbstractDataIdentifier`.

<b>Subclasses</b>	<a href="#">DiagnosticReadDataByIdentifier</a> , <a href="#">DiagnosticReadScalingDataByIdentifier</a> , <a href="#">DiagnosticWriteDataByIdentifier</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataIdentifier	<a href="#">DiagnosticAbstractDataIdentifier</a>	0..1	ref	This represents the linked <a href="#">DiagnosticDataIdentifier</a> .

**Table 5.24: DiagnosticDataByIdentifier**

The modeling of [DiagnosticDataByIdentifier](#) represents concrete instances of diagnostic services within a [DiagnosticExtract](#). However, there are attributes that are shared among all instances of [DiagnosticReadDataByIdentifier](#).

For this purpose the dedicated service class [DiagnosticReadDataByIdentifierClass](#) has been introduced.

<b>Class</b>	<b>DiagnosticReadDataByIdentifierClass</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::DataByIdentifier			
<b>Note</b>	This meta-class contains attributes shared by all instances of the "Read Data by Identifier" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticDataByIdentifiers			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceClass</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
maxDidToRead	PositiveInteger	0..1	attr	This attribute represents the maximum number of allowed DIDs in a single instance of DiagnosticReadDataBy Identifier.

**Table 5.25: DiagnosticReadDataByIdentifierClass**

Please note that it is possible to create a reference to a concrete [DiagnosticDataIdentifier](#) from different [DiagnosticServiceInstances](#).

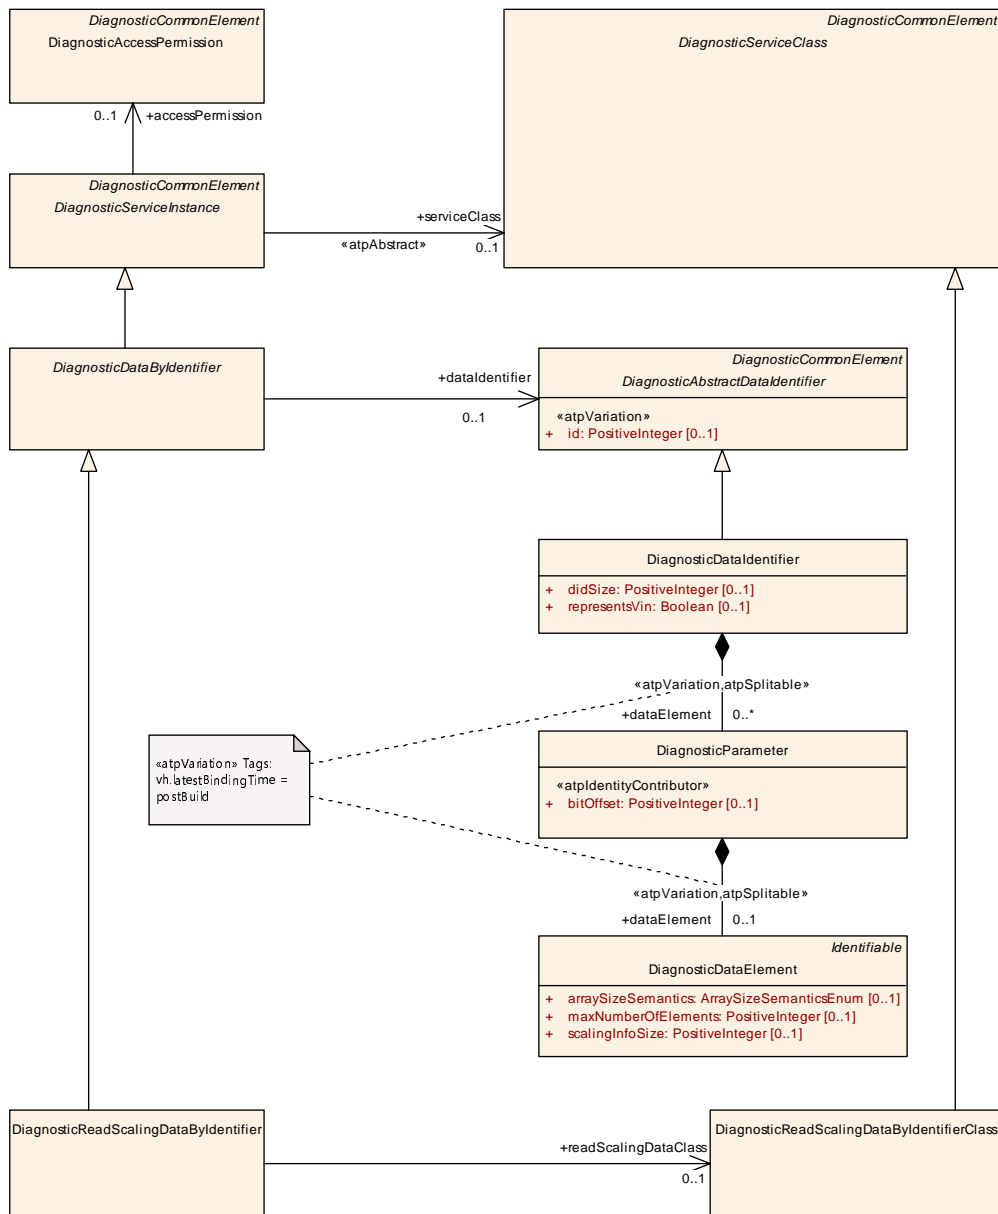

**[TPS\_DEXT\_01050] Consistency of [DiagnosticServiceSwMapping](#) with respect to data IDs** [For each [DiagnosticServiceSwMapping](#) that references a [DiagnosticValueNeeds](#) and a [DiagnosticDataByIdentifier](#), the value of [DiagnosticValueNeeds.didNumber](#) shall be ignored and the value of [DiagnosticDataByIdentifier.dataIdentifier.id](#) shall be taken instead.] ([RS\\_DEXT\\_00007](#), [RS\\_DEXT\\_00013](#), [RS\\_DEXT\\_00034](#), [RS\\_DEXT\\_00052](#))

<b>Class</b>	<b>DiagnosticValueNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the general needs on the configuration of the Diagnostic Communication Manager (DCM) which are not related to a particular item (e.g. a PID). The main use case is the mapping of service ports to the DCM which are not related to a particular item.  In the case of using a sender receiver communicated value, the related value shall be taken via assigned Data in the role "signalBasedDiagnostics".  In case of using a client/server communicated value, the related value shall be communicated via the port referenced by assignedPort. The details of this communication (e.g. appropriate naming conventions) are specified in the related software specifications (SWS).			
<b>Base</b>	<a href="#">ARObject</a> , <a href="#">DiagnosticCapabilityElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a> , <a href="#">ServiceNeeds</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataLength	PositiveInteger	0..1	attr	This attribute is applicable only if the ServiceNeed is aggregated within BswModuleDependency.  This attribute represents the length of data (in bytes) provided for this particular PID signal.
diagnosticValue Access	DiagnosticValueAccess Enum	0..1	attr	This attribute controls whether the data can be read and written or whether it is to be handled read-only.
didNumber	PositiveInteger	0..1	attr	This represents a Data identifier for the diagnostic value. This allows to predefine the DID number if the responsible function developer has received a particular requirement from the OEM or from a standardization body.
fixedLength	Boolean	0..1	attr	This attribute controls whether the data length of the data is fixed.

Class	DiagnosticValueNeeds			
processingStyle	DiagnosticProcessingStyleEnum	0..1	attr	This attribute controls whether interaction requires the software-component to react synchronously on a request or whether it processes the request in background but still the DCM has to issue the call again to eventually obtain the result of the request.

**Table 5.26: DiagnosticValueNeeds**

**Figure 5.7: Modeling of diagnostic services ReadScalingDataByIdentifier (0x24)**

**[TPS\_DEXT\_01146] Support for service ReadScalingDataByIdentifier (0x24)** [The AUTOSAR Diagnostic Extract supports the configuration of UDS service ReadScalingDataByIdentifier (0x24). For this purpose meta-classes

`DiagnosticReadScalingDataByIdentifier` and `DiagnosticReadScalingDataByIdentifierClass` shall be used.]([RS\\_DEXT\\_00007](#), [RS\\_DEXT\\_00034](#))

**[constr\_1623] Restriction on `DiagnosticReadScalingDataByIdentifier.dataIdentifier`** [The reference `DiagnosticReadScalingDataByIdentifier.dataIdentifier` shall only refer to a `DiagnosticDataIdentifier`.]()

**[constr\_1624] Existence of `DiagnosticDataElement.scalingInfoSize`** [The attribute `DiagnosticDataElement.scalingInfoSize` shall only exist if the enclosing `DiagnosticParameter` is aggregated by a `DiagnosticDataIdentifier` that is referenced by a `DiagnosticReadScalingDataByIdentifier` in the role `DiagnosticReadScalingDataByIdentifier.dataIdentifier`.]()

<b>Class</b>	<b>DiagnosticReadScalingDataByIdentifier</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::DataByIdentifier			
<b>Note</b>	This represents an instance of the "Read Scaling Data by Identifier" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticDataByIdentifiers			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticDataByIdentifier</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
readScalingDataClass	<a href="#">DiagnosticReadScalingDataByIdentifierClass</a>	0..1	ref	This reference substantiates that abstract reference in the role serviceClass for this specific concrete class. Thereby, the reference represents the ability to access shared attributes among all <code>DiagnosticReadScalingDataByIdentifier</code> in the given context.

**Table 5.27: DiagnosticReadScalingDataByIdentifier**

<b>Class</b>	<b>DiagnosticReadScalingDataByIdentifierClass</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::DataByIdentifier			
<b>Note</b>	This meta-class contains attributes shared by all instances of the "Read Scaling Data by Identifier" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticDataByIdentifiers

<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table 5.28: DiagnosticReadScalingDataByIdentifierClass**

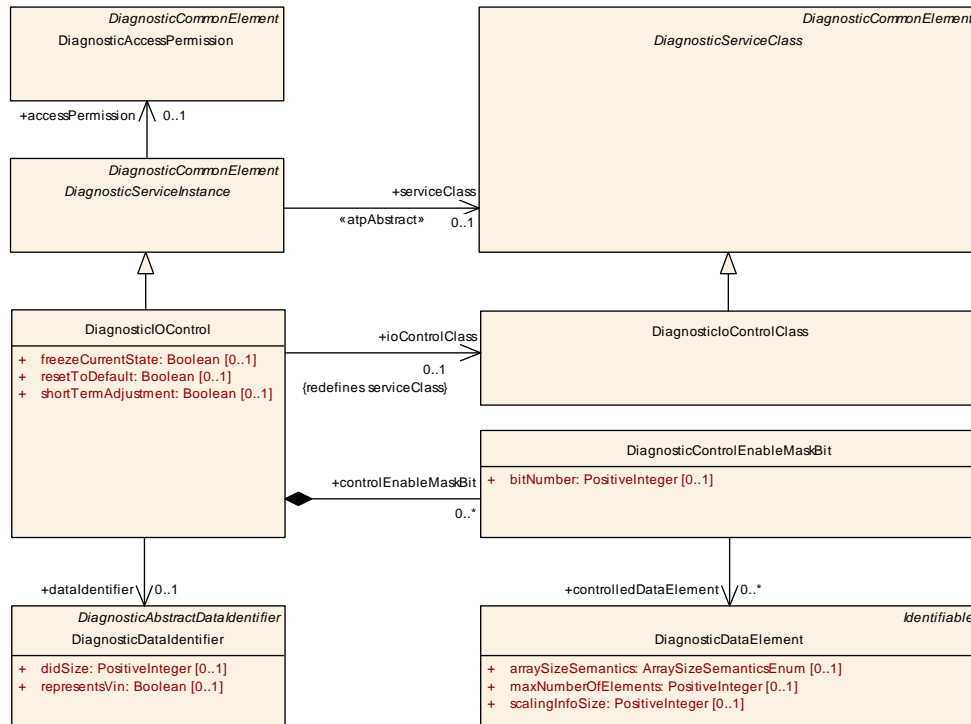

## 5.5.2 IOControl

This chapter describes the modeling of diagnostic services `InputOutputControl` (0x2F). The purpose of this service is to provide the tester with the ability to override values exchanged with the AUTOSAR hardware abstraction.

**[TPS\_DEXT\_01015] Meaning of attributes of `DiagnosticIOControl`** [The attributes `freezeCurrentState`, `resetToDefault`, and `shortTermAdjustment`

represent the capabilities of the server rather than a concrete request message.](RS\_DEXT\_00014)

[TPS\_DEXT\_01016] **The capability returnControlToEcu** [According to the statement made by [TPS\_DEXT\_01015], there is no formal means provided to configure the capability to execute *returnControlToEcu*. This lack of configuration is intentional because the capability is always available and cannot be revoked anyway.](RS\_DEXT\_00014)

**Figure 5.8: Modeling of diagnostic service IOControl (0x2F)**

[TPS\_DEXT\_01017] **Meaning of DiagnosticIOControl.dataIdentifier** [The DiagnosticIOControl.dataIdentifier is taken for specifying the payload for the service.

However, in some cases dataIdentifier models the payload of the request message (DiagnosticIOControl.shortTermAdjustment is set to true) and in some cases it represents the payload of the response message.](RS\_DEXT\_00014, RS\_DEXT\_00034)

Please note that the referenced dataIdentifier itself may aggregate several DiagnosticDataElements.

At run-time, only some DiagnosticDataElements may be relevant for a specific execution of the service InputOutput Control. For this purpose, the diagnostic message contains the so-called ControlEnableMaskRecord (for more information, please refer to [SWS\_DCM\_00581]).

[TPS\_DEXT\_01089] Definition of an *identifier* of a **DiagnosticIOControl** [The *identifier* of a **DiagnosticIOControl** is defined by the attribute **DiagnosticIOControl.dataIdentifier.id**.] ([RS\\_DEXT\\_00037](#))

<b>Class</b>	<b>DiagnosticIOControl</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::IOControl			
<b>Note</b>	This represents an instance of the "I/O Control" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticIoControls			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
controlEnableMaskBit	<a href="#">DiagnosticControlEnableMaskBit</a>	*	aggr	This aggregation represents the control mask record consisting of single bits.
dataIdentifier	<a href="#">DiagnosticDataIdentifier</a>	0..1	ref	This represents the corresponding DiagnosticData Identifier
freezeCurrentState	Boolean	0..1	attr	Setting this attribute to true represents the ability of the Dcm to execute a freezeCurrentState.
ioControlClass	<a href="#">DiagnosticIoControlClass</a>	0..1	ref	This reference substantiates that abstract reference in the role serviceClass for this specific concrete class.  Thereby, the reference represents the ability to access shared attributes among all DiagnosticIOControl in the given context.
resetToDefault	Boolean	0..1	attr	Setting this attribute to true represents the ability of the Dcm to execute a resetToDefault.
shortTermAdjustment	Boolean	0..1	attr	Setting this attribute to true represents the ability of the Dcm to execute a shortTermAdjustment.

**Table 5.29: DiagnosticIOControl**

<b>Class</b>	<b>DiagnosticIoControlClass</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::IOControl			
<b>Note</b>	This meta-class contains attributes shared by all instances of the "IO Control" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticIoControls			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceClass</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

**Table 5.30: DiagnosticIoControlClass**

[TPS\_DEXT\_01018] **InputOutput Control does not define any sub-functions** [The diagnostic service **InputOutput Control** does not define any sub-functions, therefore the value of **DiagnosticIOControl.category** does not need to be constrained.] ([RS\\_DEXT\\_00014](#), [RS\\_DEXT\\_00051](#))

[TPS\_DEXT\_01051] **Consistency of DiagnosticServiceSwMapping with respect to data IDs** [For each **DiagnosticServiceSwMapping** that references a **DiagnosticIoControlNeeds** and a **DiagnosticIOControl**, the value of **DiagnosticIoControlNeeds.didNumber** shall be ignored and the value of **DiagnosticIOControl.dataIdentifier.id** shall be taken instead.] ([RS\\_DEXT\\_00014](#), [RS\\_DEXT\\_00052](#))

<b>Class</b>	<b>DiagnosticIoControlNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the general needs on the configuration of the Diagnostic Communication Manager (DCM) which are not related to a particular item (e.g. a PID). The main use case is the mapping of service ports to the Dcm which are not related to a particular item.			
<b>Base</b>	<i>ARObject</i> , <i>DiagnosticCapabilityElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Referrable</i> , <i>ServiceNeeds</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
currentValue	<a href="#">DiagnosticValueNeeds</a>	0..1	ref	Reference to the DiagnosticValueNeeds indicating the access to the current value via signalBasedDiagnostics.
didNumber	PositiveInteger	0..1	attr	This represents a Data identifier for the diagnostic value. This allows to predefine the DID number if the a function developer has received a particular requirement from the OEM or from a standardization body.
freezeCurrentStateSupported	Boolean	0..1	attr	This attribute determines, if the referenced port supports temporary freezing of I/O value.
resetToDefaultSupported	Boolean	0..1	attr	This represents a flag for the existence of the ResetToDefault operation in the service interface.
shortTermAdjustmentSupported	Boolean	0..1	attr	This attribute determines, if the referenced port supports temporarily setting of I/O value to a specific value provided by the diagnostic tester.

**Table 5.31: DiagnosticIoControlNeeds**

[TPS\_DEXT\_01150] **Semantics of meta-class [DiagnosticControlEnableMaskBit](#)** [By aggregating [DiagnosticControlEnableMaskBit](#) at [DiagnosticIoControl](#) it is possible to specify **I/O control channels** in the diagnostic extract.

The reference [DiagnosticControlEnableMaskBit.controlledDataElement](#) identifies all [DiagnosticDataElements](#) that belong to the I/O control channel represented by the bit in the control mask record.]([RS\\_DEXT\\_00014](#), [RS\\_DEXT\\_00034](#))

<b>Class</b>	<b>DiagnosticControlEnableMaskBit</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::IOControl			
<b>Note</b>	This meta-class has the ability to represent one bit in the control enable mask record.			
<b>Base</b>	<i>ARObject</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
bitNumber	PositiveInteger	0..1	attr	This attribute represents the bit number of the bit in the control mask record. Bit number 0 is the most significant bit (MSB) in the first byte of the CEMR in the network presentation.
controlledDataElement	<a href="#">DiagnosticDataElement</a>	*	ref	This reference represents the collection of DiagnosticDataElements that are controlled by this bit of the control mask record.

**Table 5.32: DiagnosticControlEnableMaskBit**

Please note that the modeling of the [controlEnableMaskBit](#) intentionally does not use the `ordered` annotation to assign bit numbers to the aggregated [DiagnosticControlEnableMaskBits](#).

The control mask record does not necessarily have to be used from top to bottom without gaps. Example: bit 3 could be unused, but 0,1, and 4 could be used.

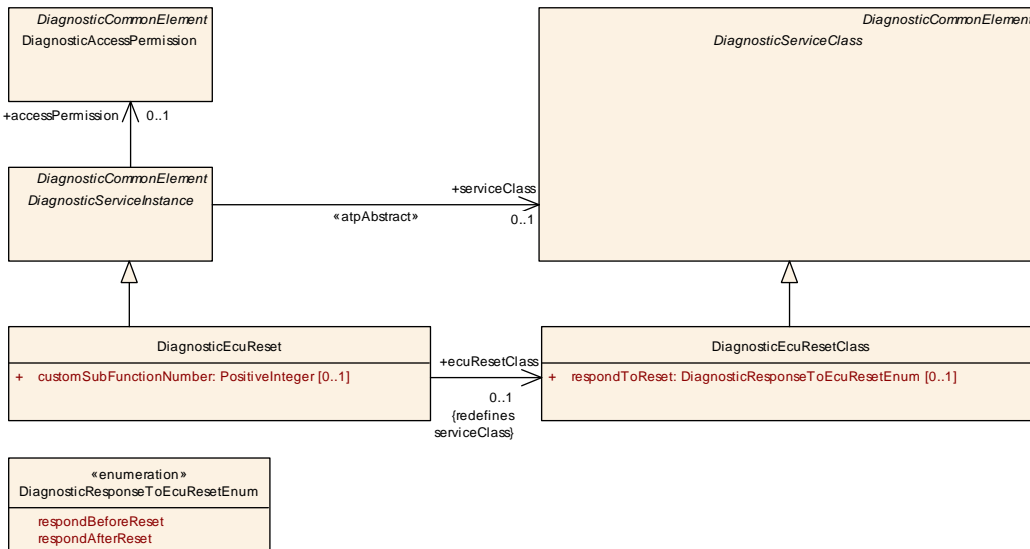

**[constr\_1721] DiagnosticControlEnableMaskBit.bitNumber shall be unique** [Within the context of the enclosing DiagnosticIOControl the value of attribute DiagnosticIOControl.controlEnableMaskBit.bitNumber shall be unique.]()

Please note that within the context of a DiagnosticIOControl, it is **not** required to have 0 as the lowest value of aggregated DiagnosticIOControl.controlEnableMaskBit.bitNumber.

**[constr\_1722] Relation between reference DiagnosticIOControl.dataIdentifier and attribute DiagnosticIOControl.controlEnableMaskBit** [Any DiagnosticDataElement referenced in the role DiagnosticIOControl.controlEnableMaskBit.controlledDataElement shall be defined in the scope of the DiagnosticDataIdentifier that is referenced in the role DiagnosticIOControl.dataIdentifier.]()

### 5.5.3 EcuReset

This chapter describes the modeling of diagnostic services EcuReset (0x11).

**Figure 5.9: Modeling of diagnostic service EcuReset (0x11)**

<b>Class</b>	<b>DiagnosticEcuReset</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EcuReset			
<b>Note</b>	This represents an instance of the "ECU Reset" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticEcuResets			
<b>Base</b>	ARElement, ARObjct, CollectableElement, DiagnosticCommonElement, DiagnosticServiceInstance, Identifiable, MultilanguageReferrable, PackageableElement, Referrable			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

Class	DiagnosticEcuReset			
customSubFunctionNumber	PositiveInteger	0..1	attr	This attribute shall be used to define a custom sub-function number if none of the standardized values of category shall be used.
ecuResetClass	<a href="#">DiagnosticEcuResetClass</a>	0..1	ref	This reference substantiates that abstract reference in the role serviceClass for this specific concrete class.  Thereby, the reference represents the ability to access shared attributes among all DiagnosticEcuReset in the given context.

**Table 5.33: DiagnosticEcuReset**

Class	DiagnosticEcuResetClass			
Package	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EcuReset			
Note	This meta-class contains attributes shared by all instances of the "Ecu Reset" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticEcuResets			
Base	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceClass</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
Attribute	Type	Mult.	Kind	Note
respondToReset	<a href="#">DiagnosticResponseToEcuResetEnum</a>	0..1	attr	This attribute defines whether the response to the Ecu Reset service shall be transmitted before or after the actual reset.

**Table 5.34: DiagnosticEcuResetClass**

Enumeration	DiagnosticResponseToEcuResetEnum			
Package	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::EcuReset			
Note				
Literal	Description			
respondAfterReset	Answer to EcuReset service should come after the reset. <b>Tags:</b> atp.EnumerationLiteralIndex=0			
respondBeforeReset	Answer to EcuReset service should come before the reset. <b>Tags:</b> atp.EnumerationLiteralIndex=1			

**Table 5.35: DiagnosticResponseToEcuResetEnum**

Please note that (as already explained in section 5.5) the `SubFunctions` of this service are modeled by means of the `category` attribute.

**[TPS\_DEXT\_01056] Applicable values for `DiagnosticEcuReset.category`** [The following values of the attribute `DiagnosticEcuReset.category` are standardized by AUTOSAR:

- `HARD_RESET`
- `KEY_OFF_ON_RESET`
- `SOFT_RESET`
- `ENABLE_RAPID_POWER_SHUT_DOWN`
- `DISABLE_RAPID_POWER_SHUT_DOWN`

The meaning of these values is described in the applicable ISO document [16].] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00004](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01019] Correspondence of `category` values to numerical values mentioned in the ISO 14229-1** [The ISO 14229-1 [16] standard document defines specific numerical values for the sub-functions of the diagnostic service `EcuReset`.

The correspondence of the numerical values to the pre-defined values of `category` according to [TPS\_DEXT\_01056] is pretty obvious because the definition of values defined in [TPS\_DEXT\_01056] has been directly inspired by the ISO 14229-1 [16] standard document.] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00004](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01020] Manufacturer-specific values for sub-functions of service `EcuReset`** [The ISO 14229-1 [16] standard document, beyond the standardized numerical values for sub-functions, reserves a numerical range of subFunction identifiers for manufacturer- or supplier-specific use.

In this case it is possible to define further values for `category`, provided that a custom prefix is used to avoid potential name clashes with further extensions of the AUTOSAR standard, namely [TPS\_DEXT\_01056].] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00004](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01021] Semantics of `DiagnosticEcuReset.customSubFunctionNumber`** [The attribute `DiagnosticEcuReset.customSubFunctionNumber` has been introduced to allow for the specification of a manufacturer- or supplier-specific value to represent the custom sub-function in the diagnostic communication.

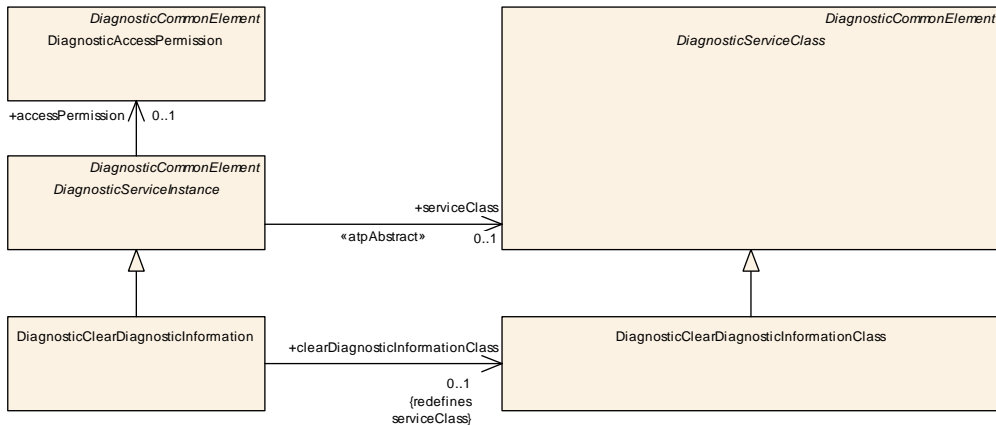

The tuple created by the values of attributes `DiagnosticEcuReset.category` and `DiagnosticEcuReset.customSubFunctionNumber` fully specifies identification of the manufacturer- or supplier-specific sub-function.] ([RS\\_DEXT\\_00004](#), [RS\\_DEXT\\_00047](#), [RS\\_DEXT\\_00051](#))

**[constr\_1331] Existence of `DiagnosticEcuReset.customSubFunctionNumber`** [The attribute `DiagnosticEcuReset.customSubFunctionNumber` shall only exist if the value of `DiagnosticEcuReset.category` is outside the standardized set of values as defined by [TPS\_DEXT\_01056].] ()

**[constr\_1332] Value range for `DiagnosticEcuReset.customSubFunctionNumber`** [The allowed value for `DiagnosticEcuReset.customSubFunctionNumber` shall always be within the closed interval `0x40 .. 0x7E`.] ()

#### 5.5.4 ClearDiagnosticInformation

This chapter describes the modeling of diagnostic services `ClearDiagnosticInformation` (0x14). As the name suggests, the purpose of the service is to clear diagnostic information in the AUTOSAR diagnostics stack.

**Figure 5.10: Modeling of diagnostic service ClearDiagnosticInformation (0x14)**

Please note that there is nothing to configure for `DiagnosticClearDiagnosticInformation` beyond its mere existence.

<b>Class</b>	<b>DiagnosticClearDiagnosticInformation</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ClearDiagnosticInfo			
<b>Note</b>	This represents an instance of the "Clear Diagnostic Information" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticClearDiagnosticInformations			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
clearDiagnosticInformationClass	<a href="#">DiagnosticClearDiagnosticInformationClass</a>	0..1	ref	This reference substantiates that abstract reference in the role serviceClass for this specific concrete class. Thereby, the reference represents the ability to access shared attributes among all DiagnosticClearDiagnosticInformation in the given context.

**Table 5.36: DiagnosticClearDiagnosticInformation**

<b>Class</b>	<b>DiagnosticClearDiagnosticInformationClass</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ClearDiagnosticInfo			
<b>Note</b>	This meta-class contains attributes shared by all instances of the "Clear Diagnostic Information" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticClearDiagnosticInformations			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceClass</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
-	-	-	-	-

**Table 5.37: DiagnosticClearDiagnosticInformationClass**

**[TPS\_DEXT\_01022] ClearDiagnosticInformation does not define any sub-functions** [The diagnostic service `ClearDiagnosticInformation` does not define any sub-functions, therefore the value of `DiagnosticClearDiagnosticInformation.category` does not need to be constrained.]([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00005](#), [RS\\_DEXT\\_00051](#))

### 5.5.5 Memory Services

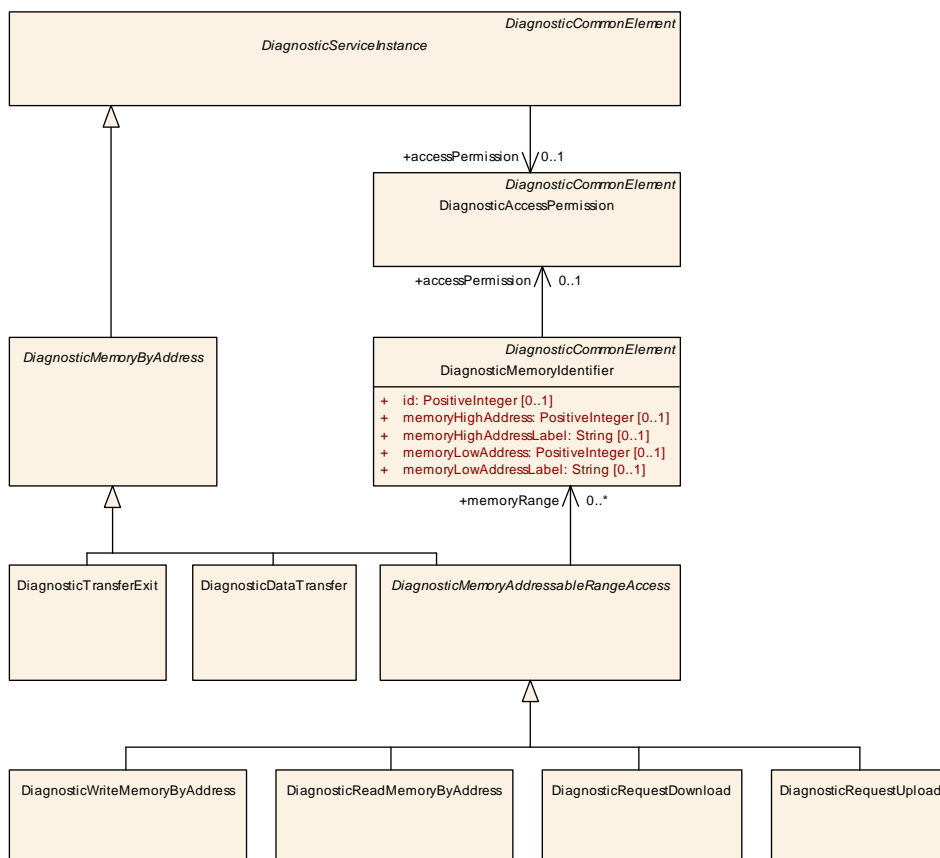

This chapter describes the modeling of diagnostic services for memory access (0x23, 0x3D, 0x34-0x37). The purpose of these services is to access memory on the diagnostic stack on request of the tester.

The service description for accessing memory for diagnostic purposes is modeled by the abstract meta-class `DiagnosticMemoryByAddress`. It is supposed to provide all model properties relevant for the memory access.

The description of memory access, to some extent, requires a formal description of the memory segments to take into account. For this purpose the meta-class `DiagnosticMemoryIdentifier` has been introduced and referenced by `DiagnosticMemoryAddressableRangeAccess` in the role `memoryRange`.

The intent of this modeling was not to provide a generic memory model but to allow for the specification of memory properties just as far as diagnostics is concerned.

The aggregation of `DiagnosticMemoryIdentifier` at `DiagnosticMemoryByAddress` may or may not be relevant for an OEM. However, there is certainly a use case for adding this information to a `DiagnosticExtract` that goes back from a tier-1 supplier to an OEM as sort of documentation of the diagnostic configuration.

**Figure 5.11: Modeling of diagnostic services Memory (0x23, 0x3D, 0x34-0x37)**

As `DiagnosticMemoryByAddress` represents a generic base class for all kinds of diagnostic memory access, it is also necessary to model the particular sub-classes that address specific use cases for diagnostic memory access.

These sub-classes are conceptually on the same level as other sub-classes of `DiagnosticServiceInstance`.

In other words, the case of memory access deviates from the modeling of other diagnostic services such that there is one further abstract base class involved.

**[constr\_1333] Existence of `DiagnosticMemoryIdentifier.memoryLowAddress` and `DiagnosticMemoryIdentifier.memoryHighAddress`** [The attributes `DiagnosticMemoryIdentifier.memoryLowAddress` as well as `DiagnosticMemoryIdentifier.memoryHighAddress` shall not exist if the `DiagnosticMemoryIdentifier` referenced in the role `memoryRange` is referenced by a `DiagnosticRequestDownload` or a `DiagnosticRequestUpload`.]()

**[constr\_1411] Existence of `DiagnosticMemoryIdentifier.memoryHighAddressLabel` vs. `DiagnosticMemoryIdentifier.memoryHighAddress`** [At most **one** of the attributes in the following list shall exist:

- `DiagnosticMemoryIdentifier.memoryHighAddressLabel`
- `DiagnosticMemoryIdentifier.memoryHighAddress`

]()

**[constr\_1412] Existence of `DiagnosticMemoryIdentifier.memoryLowAddressLabel` vs. `DiagnosticMemoryIdentifier.memoryLowAddress`** [At most **one** of the attributes in the following list shall exist:

- `DiagnosticMemoryIdentifier.memoryLowAddressLabel`
- `DiagnosticMemoryIdentifier.memoryLowAddress`

]()

Please note that it does not make sense to describe a memory address in this context **both** numerically **and** symbolically. If the address is described at all (see [constr\_1333]) then it shall be done **either** symbolically or numerically. This is the motivation of the existence of [constr\_1411] and [constr\_1412].

<b>Class</b>	<code>DiagnosticMemoryByAddress</code> (abstract)
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::MemoryByAddress
<b>Note</b>	This represents an abstract base class for diagnostic services that deal with accessing memory by address.
<b>Base</b>	<code>ARElement</code> , <code>ARObject</code> , <code>CollectableElement</code> , <code>DiagnosticCommonElement</code> , <code>DiagnosticServiceInstance</code> , <code>Identifiable</code> , <code>MultilanguageReferrable</code> , <code>PackageableElement</code> , <code>Referrable</code>

### 5.5.6 CommunicationControl

This chapter describes the modeling of diagnostic services `CommunicationControl` (0x28). The purpose of this diagnostic service is to enable or disable `ISignalIP-duGroups`.

**Figure 5.18: Modeling of diagnostic service CommunicationControl (0x28)**

However, the actual implementation of the enabling or disabling is obviously not executed directly within the diagnostic stack. It requires some interaction with the BswM that in turn implements the enabling algorithm.

Therefore, the meta-class modeled for this purpose does not need to refer to `ISignalIPduGroups` but implements a mode request to the BswM.

**[TPS\_DEXT\_01057] Allowed values of `DiagnosticComControl.category`** [The sub-functions of the diagnostic services `CommunicationControl` are identified by means of the attribute `DiagnosticComControl.category`. Standardized values of `DiagnosticComControl.category` are:

- `ENABLE_RX_AND_TX`
- `DISABLE_RX_AND_TX`
- `ENABLE_RX_AND_DISABLE_TX`
- `DISABLE_RX_AND_ENABLE_TX`
- `ENABLE_RX_AND_DISABLE_TX_WITH_ENHANCED_ADDRESS_INFORMATION`
- `ENABLE_RX_AND_TX_WITH_ENHANCED_ADDRESS_INFORMATION`

The meaning of these values is described in the applicable ISO document [16].] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00010](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01029] Correspondence of `category` values to numerical values mentioned in the ISO 14229-1** [The ISO 14229-1 [16] standard document defines specific numerical values for the sub-functions of the diagnostic service `CommunicationControl`.

The correspondence of the numerical values to the pre-defined values of `category` according to [TPS\_DEXT\_01057] is pretty obvious because the definition of values defined in [TPS\_DEXT\_01057] has been directly inspired by the ISO 14229-1 [16] standard document.] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00010](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01030] Manufacturer-specific values for sub-functions of service `CommunicationControl`** [The ISO 14229-1 [16] standard document, beyond the standardized numerical values for sub-functions, reserves a numerical range of sub-Function identifiers for manufacturer-specific use.

In this case it is possible to define further values for `category`, provided that a custom prefix is used to avoid potential name clashes with further extensions of the AUTOSAR standard, namely [TPS\_DEXT\_01057].] ([RS\\_DEXT\\_00010](#), [RS\\_DEXT\\_00047](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01031] Semantics of `DiagnosticComControl.customSubFunctionNumber`** [The attribute `DiagnosticComControl.customSubFunctionNumber` has been introduced to allow for the specification of a manufacturer-or supplier-specific value to represent the custom sub-function in the diagnostic communication.

The tuple created by the values of attributes `DiagnosticComControl.category` and `DiagnosticComControl.customSubFunctionNumber` fully specifies identification of the manufacturer- or supplier-specific sub-function. [\]\(RS\\_DEXT\\_00010, RS\\_DEXT\\_00047, RS\\_DEXT\\_00051\)](#)

**[constr\_1334] Existence of `DiagnosticComControl.customSubFunctionNumber`** [The attribute `DiagnosticComControl.customSubFunctionNumber` shall only exist if the value of `DiagnosticComControl.category` is outside the standardized set of values as defined by [\[TPS\\_DEXT\\_01057\]](#).]()

**[constr\_1335] Possible values for `DiagnosticComControl.customSubFunctionNumber`** [Given the fulfillment of [\[constr\\_1334\]](#), the value of a given `DiagnosticComControl.customSubFunctionNumber` shall always be within the closed interval `0x40 .. 0x5F` (for manufacturer-specific sub-functions) or the closed interval `0x60 .. 0x7E` (for supplier-specific sub-functions).]()

**[TPS\_DEXT\_01032] Impact of the `DiagnosticComControlClass` on the state management for `CommunicationClusters`** [The impact of the `DiagnosticComControlClass` on the state management for `CommunicationClusters` can have two alternative consequences:

- All `CommunicationClusters` are affected. For this purpose the attribute `allChannels` has the ability to identify the applicable `CommunicationClusters`.

It may seem counterintuitive to require a reference to all applicable `CommunicationClusters` when the expected semantics is actually to define an impact on **all** of them.

However, there could be private `CommunicationClusters` that are not participating in the diagnostics work-flow: These need to be kept out of scope and therefore the explicit identification of applicable `CommunicationClusters` makes sense.

- A selected number of `CommunicationClusters` is affected. This is conceptually different from the other use case in that it requires an additional attribute that keeps a `subnetNumber` that is typically assigned by the OEM role.

[\]\(RS\\_DEXT\\_00010\)](#)

<b>Class</b>	<<atpVariation>> <i>CommunicationCluster</i> (abstract)
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology

<b>Class</b>	<<atpVariation>> <b>CommunicationCluster</b> (abstract)			
<b>Note</b>	The CommunicationCluster is the main element to describe the topological connection of communicating ECUs. A cluster describes the ensemble of ECUs, which are linked by a communication medium of arbitrary topology (bus, star, ring, ...). The nodes within the cluster share the same communication protocol, which may be event-triggered, time-triggered or a combination of both. A CommunicationCluster aggregates one or more physical channels. <b>Tags:</b> vh.latestBindingTime=postBuild			
<b>Base</b>	<i>ARObject, CollectableElement, FibexElement, Identifiable, MultilanguageReferrable, PackageableElement, Referrable</i>			
<b>Subclasses</b>	<i>AbstractCanCluster, EthernetCluster, FlexrayCluster, LinCluster, UserDefinedCluster</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
baudrate	PositiveUnlimitedInteger	0..1	attr	Channels speed in bits/s.
physicalChannel	PhysicalChannel	1..*	aggr	This relationship defines which channel element belongs to which cluster. A channel shall be assigned to exactly one cluster, whereas a cluster may have one or more channels. Note: This atpSplittable property has no atp.Splitkey due to atpVariation (PropertySetPattern). <b>Stereotypes:</b> atpSplittable; atpVariation <b>Tags:</b> vh.latestBindingTime=systemDesignTime
protocolName	String	0..1	attr	The name of the protocol used.
protocolVersion	String	0..1	attr	The version of the protocol used.

**Table 5.53: CommunicationCluster**

**[constr\_1336] Applicable value range for DiagnosticComControlSpecificChannel.subnetNumber** [The value of attribute `DiagnosticComControlSpecificChannel.subnetNumber` shall be within the closed interval **1 .. 14**.]()

Please note that the regulation implied by [constr\_1336] has not been introduced on an arbitrary basis but gets its conceptual background from the ISO 14229-1 [16] standard document.

Obviously, a diagnostic service with the name `CommunicationControl` will have an impact on the enclosing ECU's mode management. This impact, however, is not defined by any further attributes or references, the `DiagnosticComControl` is the impact.

By defining a `DiagnosticComControl` and setting the category to one of the applicable values (e.g. `ENABLE_RX_AND_TX`), it is possible to express the intended semantics to the full extent.

**[constr\_1337] Allowed value range for attribute DiagnosticComControlSubNodeChannel.subNodeNumber** [The value of attribute `DiagnosticComControlSubNodeChannel.subNodeNumber` shall not exceed the closed interval **0 .. 65535**.]()

[TPS\_DEXT\_01074] Difference between the attributes [DiagnosticComControlClass.specificChannel](#) and [DiagnosticComControlClass.subNodeChannel](#) [The semantical difference between the attributes [DiagnosticComControlClass.specificChannel](#) and [DiagnosticComControlClass.subNodeChannel](#) is that [DiagnosticComControlClass.specificChannel](#) actually refers to a [CommunicationCluster](#) whereas [DiagnosticComControlClass.subNodeChannel](#) basically refers to a [CommunicationCluster](#) to which the nodes with the given identification numbers are connected.] ([RS\\_DEXT\\_00010](#))

Base	ARObject			
Attribute	Type	Mult.	Kind	Note
subNode Channel	<a href="#">CommunicationCluster</a>	0..1	ref	This represents the affected CommunicationClusters in the role subNodeChannel
subNode Number	PositiveInteger	0..1	attr	This represents the applicable subNode number. The value corresponds to the request message parameter nodeIdentificationNumber of diagnostic service CommunicationControl (0x28).

**Table 5.57: DiagnosticComControlSubNodeChannel**

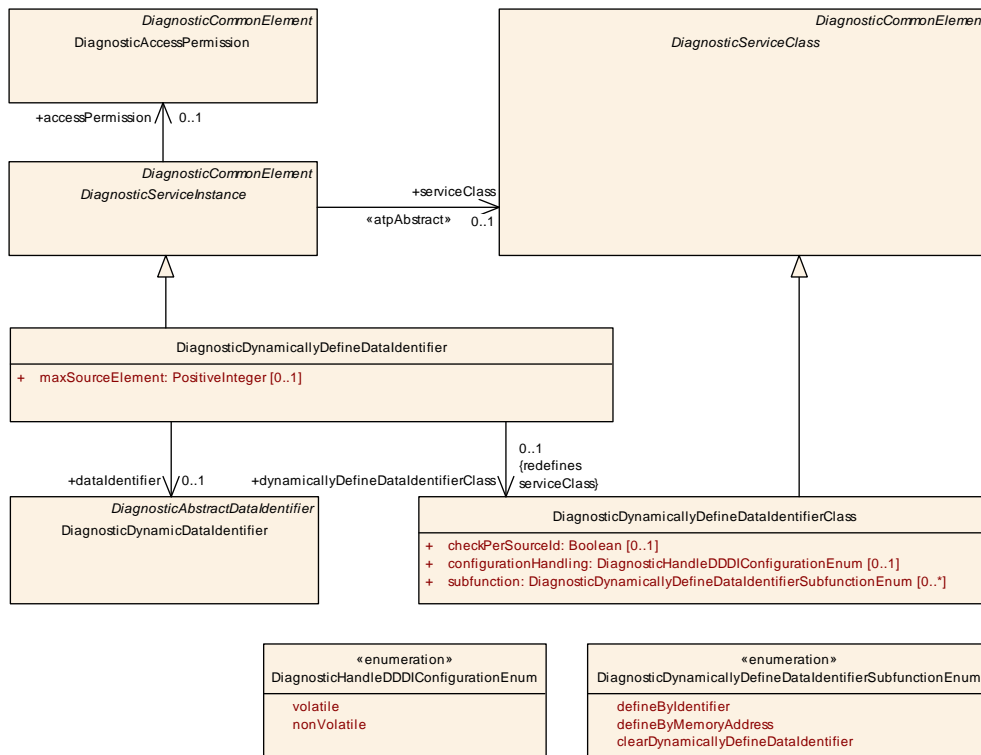

### 5.5.7 DynamicallyDefineDataIdentifier

This chapter describes the modeling of diagnostic services `DynamicallyDefineDataIdentifier` (0x2C). The purpose of the service is to allow for defining data identifiers (DID) at run-time.

By this means it is possible to combine existing diagnostic data into a single DID.

This semantics is reflected by the modeling of the meta-class `DiagnosticDynamicallyDefineDataIdentifier` that refers to a `DiagnosticDynamicDataIdentifier` in the role `dataIdentifier`.

Also, the `DiagnosticDynamicallyDefineDataIdentifier` inherits a reference to `accessPermission` from `DiagnosticServiceInstance`.

**Figure 5.19: Modeling of diagnostic service `DiagnosticDynamicallyDefineDataIdentifier` (0x2C)**

**[constr\_1421] Consistency of `DiagnosticDynamicallyDefineDataIdentifierClass.subfunction`** [The values of `DiagnosticDynamicallyDefineDataIdentifierClass.subfunction` shall not repeat, i.e. every value of `DiagnosticDynamicallyDefineDataIdentifierSubfunctionEnum` shall at most appear once in the `subfunction` attribute.] ()

<b>Literal</b>	<b>Description</b>
periodicRateFast	This value represents a fast periodic rate. <b>Tags:</b> atp.EnumerationLiteralIndex=0
periodicRateMedium	This value represents a medium periodic rate. <b>Tags:</b> atp.EnumerationLiteralIndex=1
periodicRateSlow	This value represents a slow periodic rate. <b>Tags:</b> atp.EnumerationLiteralIndex=2

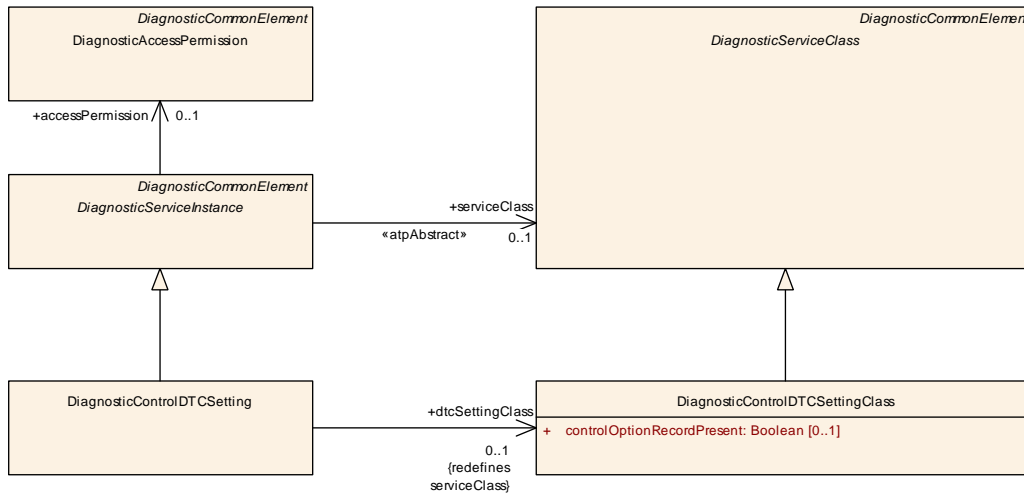

**Table 5.65: DiagnosticPeriodicRateCategoryEnum**

The meaning of the values defined in [DiagnosticPeriodicRateCategoryEnum](#) is described in the applicable ISO document [16].

### 5.5.9 ControlDTCSetting

This chapter describes the modeling of diagnostic services [ControlDTCSetting](#) (0x85). The purpose of the diagnostic service is to let the tester tell the diagnostic stack to either stop or resume the updating of a diagnostic trouble code.

**[TPS\_DEXT\_01075] standardized values for the attribute [DiagnosticControlDTCSetting.category](#)** [AUTOSAR does not standardize any of the possible values for the attribute [DiagnosticControlDTCSetting.category](#).] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00021](#), [RS\\_DEXT\\_00051](#))

**Figure 5.21: Modeling of diagnostic service ControlDTCSetting (0x85)**

<b>Class</b>	<b>DiagnosticControlDTCSetting</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ControlDTCSetting			
<b>Note</b>	This represents an instance of the "Control DTC Setting" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticControlDtcSettings			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dtcSettingClass	<a href="#">DiagnosticControlDTCSettingClass</a>	0..1	ref	This reference substantiates that abstract reference in the role serviceClass for this specific concrete class.  Thereby, the reference represents the ability to access shared attributes among all DiagnosticControlDTCSetting in the given context.

**Table 5.66: DiagnosticControlDTCSetting**

<b>Class</b>	<b>DiagnosticControlDTCSettingClass</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ControlDTCSetting			
<b>Note</b>	This meta-class contains attributes shared by all instances of the "Control DTC Setting" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticControlDtcSettings			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceClass</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
controlOptionRecordPresent	Boolean	0..1	attr	This represents the decision whether the DTCSetting ControlOptionRecord (see ISO 14229-1) is in general supported in the request message.

**Table 5.67: DiagnosticControlDTCSettingClass**

### 5.5.10 ResponseOnEvent

This chapter describes the modeling of diagnostic services `ResponseOnEvent` (0x86). The purpose of this service is to instruct the AUTOSAR diagnostic stack with respect to the starting or stopping of sending responses to a specific event to the tester.

Each `DiagnosticResponseOnEvent` provides the ability to define a collection of triggers (modelled by means of the abstract meta-class `DiagnosticResponseOnEventTrigger`) that cause the sending of a response message.

The actual trigger behavior is defined by the sub-class of `DiagnosticResponseOnEventTrigger` used to specify whether the trigger shall be created in response to a data change or in response to a DTC change.

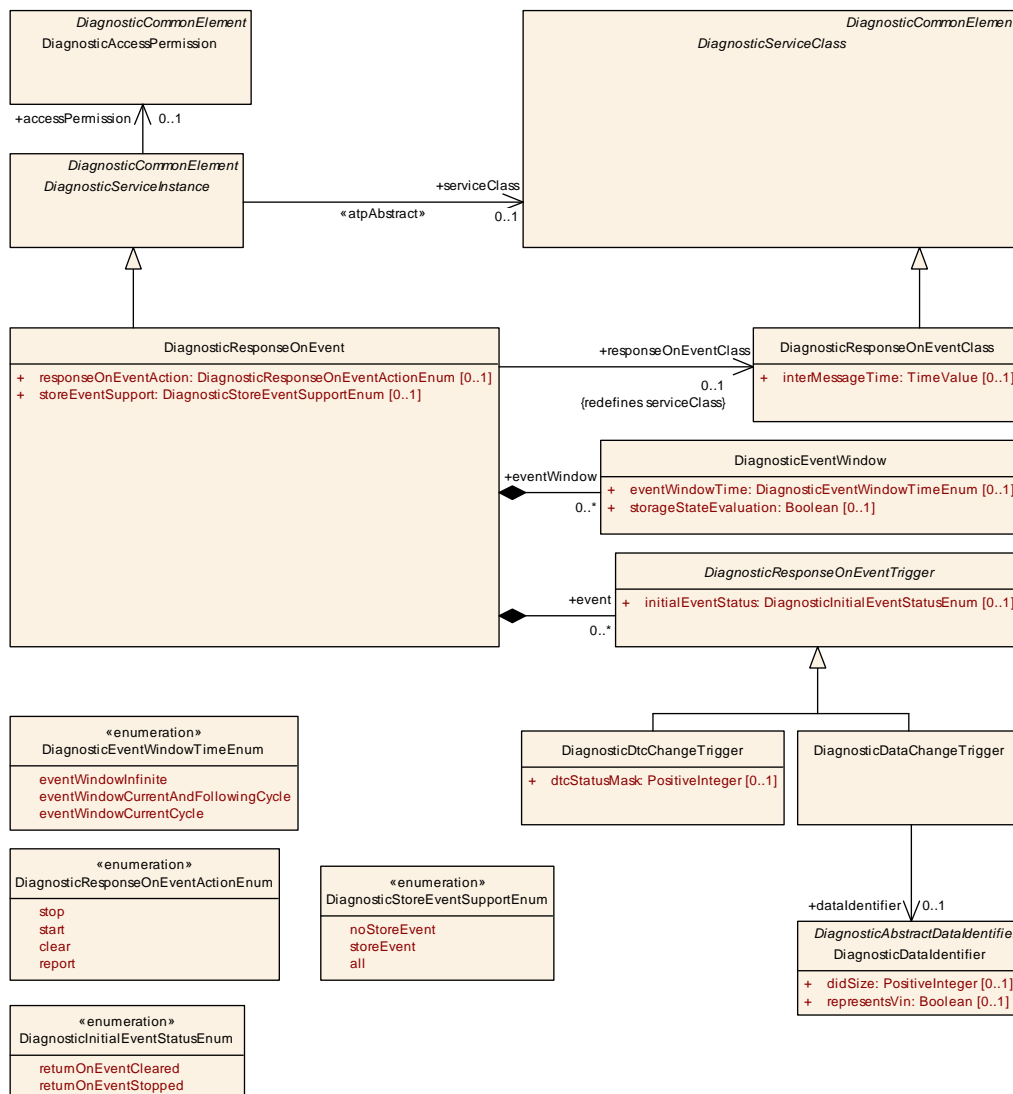

Figure 5.22: Modeling of diagnostic service `ResponseOnEvent` (0x86)

[TPS\_DEXT\_01033] Semantics of triggers in the context of a `DiagnosticResponseOnEvent` [The semantics of a trigger in the context of a `DiagnosticResponseOnEvent` can be defined in two ways:

- The meta-class `DiagnosticDataChangeTrigger` allows for defining a trigger that activates on the change of the value of the referenced (in the role `dataIdentifier`) `DiagnosticDataIdentifier`.
- The meta-class `DiagnosticDtcChangeTrigger` allows for defining a trigger for the activation of the service. The entire proceedings of how the trigger activates and what DTCs are affected in managed at run-time and therefore no further configuration is required at this point.

|(RS\_DEXT\_00022)

**[constr\_1365] Multiplicity of `DiagnosticResponseOnEvent.event`** [The multiplicity of `DiagnosticResponseOnEvent.event` shall not exceed the upper bound 255.]()

**[constr\_1366] Event ID in the context of diagnostic service `ResponseOnEvent` shall be unique** [The value of `DiagnosticResponseOnEvent.event.dataIdentifier.id` shall be unique within the context of a given `DiagnosticResponseOnEvent`.]()

**[constr\_1633] Existence of `DiagnosticResponseOnEvent.event` vs. `DiagnosticResponseOnEvent.responseOnEventAction`** [The existence of attributes `DiagnosticResponseOnEvent.event` vs. `DiagnosticResponseOnEvent.responseOnEventAction` is mutually exclusive, i.e. one shall only exist if the other does not exist.]()

<b>Class</b>	<b>DiagnosticResponseOnEvent</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ResponseOnEvent			
<b>Note</b>	This represents an instance of the "Response on Event" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticResponseOnEvents			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
event	<a href="#">DiagnosticResponseOnEventTrigger</a>	*	aggr	This represents the collection of <code>DiagnosticResponseOnEventTriggers</code> defined in the context of the enclosing <code>DiagnosticResponseOnEvent</code> .
eventWindow	<a href="#">DiagnosticEventWindow</a>	*	aggr	This represents the applicable <code>DiagnosticEventWindows</code>
responseOnEventAction	<a href="#">DiagnosticResponseOnEventActionEnum</a>	0..1	attr	Defines sub-functions of the service <code>ResponseOnEvent</code> .
responseOnEventClass	<a href="#">DiagnosticResponseOnEventClass</a>	0..1	ref	This reference substantiates that abstract reference in the role <code>serviceClass</code> for this specific concrete class. Thereby, the reference represents the ability to access shared attributes among all <code>DiagnosticResponseOnEvent</code> in the given context.
storeEventSupport	<a href="#">DiagnosticStoreEventSupportEnum</a>	0..1	attr	Defines how a specific event shall be handled.

**Table 5.68: DiagnosticResponseOnEvent**

<b>Class</b>	<b>DiagnosticResponseOnEventClass</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ResponseOnEvent			
<b>Note</b>	This represents the ability to define common properties for alle instances of the "Response on Event" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticResponseOnEvents

<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::ResponseOnEvent
<b>Note</b>	This meta-class has the ability to define sub-functions of the UDS service ResponseOnEvent.
<i>Literal</i>	<i>Description</i>
clear	Clears the configured events. <b>Tags:</b> atp.EnumerationLiteralIndex=2
report	Reports the activated events. <b>Tags:</b> atp.EnumerationLiteralIndex=3
start	Starts the response on event service. <b>Tags:</b> atp.EnumerationLiteralIndex=1
stop	Stops the response on event service. <b>Tags:</b> atp.EnumerationLiteralIndex=0

**Table 5.77: DiagnosticResponseOnEventActionEnum**

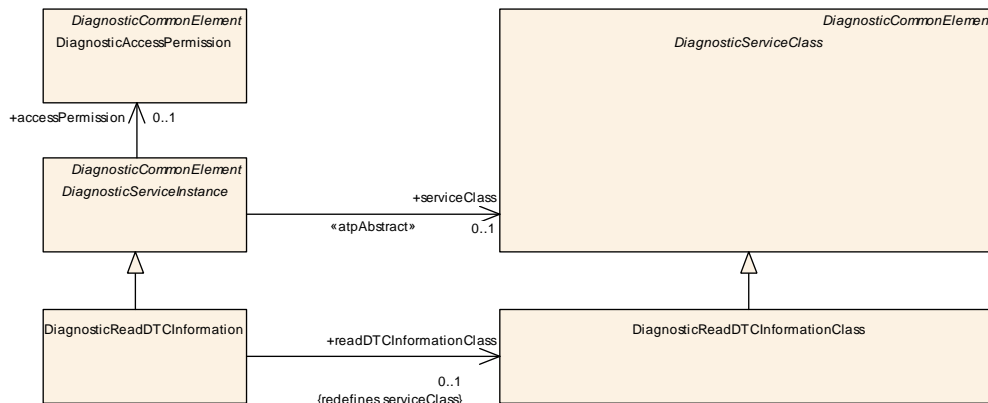

### 5.5.11 ReadDTCInformation

This chapter describes the modeling of diagnostic services `ReadDTCInformation` (0x19). The purpose of this service is to enable a tester to read a `Diagnostic Trouble Code` from the AUTOSAR `Dcm` [10] (that, in turn, fetches the information from the AUTOSAR `Dem` [11]).

**[TPS\_DEXT\_01034] Sub-functions of the service `ReadDTCInformation`** [The diagnostics service `ReadDTCInformation` defines a number of sub-functions that are, as far as the modeling in AUTOSAR goes, identified by a textual identifier.

These sub-functions are **not** modeled explicitly but can be specified by defining a `DiagnosticReadDTCInformation` and by setting the `DiagnosticReadDTCInformation.category` to the identifier of the respective sub-function.

The possible values, as far as the AUTOSAR standard is concerned, are defined by [TPS\_DEXT\_01060]. ([RS\\_DEXT\\_00006](#), [RS\\_DEXT\\_00051](#))

**Figure 5.23: Modeling of diagnostic service ReadDTCInformation (0x19)**

**[TPS\_DEXT\_01060] Applicable values for DiagnosticReadDTCInformation.category** [The following values of the attribute `DiagnosticReadDTCInformation.category` are standardized by AUTOSAR:

- REPORT\_NUMBER\_OF\_DTC\_BY\_STATUS\_MASK
- REPORT\_DTC\_BY\_STATUS\_MASK
- REPORT\_MIRROR\_MEMORY\_DTC\_BY\_STATUS\_MASK
- REPORT\_NUMBER\_OF\_MIRROR\_MEMORY\_DTC\_BY\_STATUS\_MASK

**Table 5.79: DiagnosticReadDTCInformationClass**

### 5.5.12 RoutineControl

This chapter describes the modeling of diagnostic services `RoutineControl (0x31)`. The purpose of this diagnostic service is to execute a piece of code, a `DiagnosticRoutine`, on the diagnostic stack at the request of the tester.

Diagnostic Routines consist of up to three possible components:

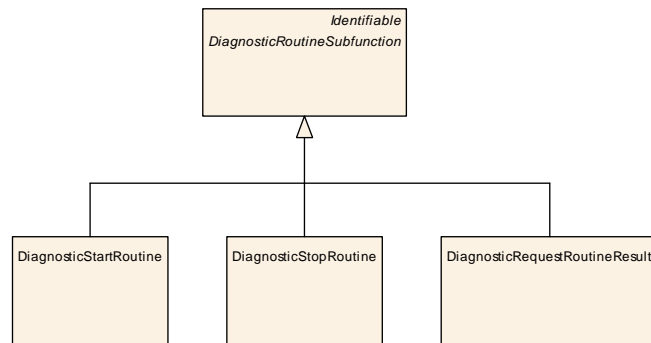

- Start Routine
- Stop Routine
- Request Routine Results

The impact of this architecture on the meta-model is described by [TPS\_DEXT\_01077]:

[TPS\_DEXT\_01077] Modeling of `DiagnosticRoutine` [From the meta-modeling point of view, the semantics of `DiagnosticRoutine` is created by aggregating three further meta-classes that represent subfunctions of service `RoutineControl (0x31)`:

- `DiagnosticStartRoutine`
- `DiagnosticStopRoutine`
- `DiagnosticRequestRoutineResults`

](RS\_DEXT\_00015)

**Figure 5.24: Abstract base class for subfunctions of diagnostic service `RoutineControl (0x31)`**

<b>Class</b>	<i>DiagnosticRoutineSubfunction</i> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::CommonDiagnostics

**Table 5.80: DiagnosticRoutineSubfunction**

[TPS\_DEXT\_01088] **Semantics of `DiagnosticRoutine.id`** [The attribute `DiagnosticRoutine.id` represents the so-called *identifier* of the `DiagnosticRoutine`.] ([RS\\_DEXT\\_00036](#))

[TPS\_DEXT\_01078] **Not possible to use the attribute `category` for the identification of the sub-function of diagnostic service `RoutineControl`** [In the case of `DiagnosticRoutine`, it is not possible to use the attribute `category` for the identification of the sub-function.] ([RS\\_DEXT\\_00015](#), [RS\\_DEXT\\_00051](#))

The sub-functions actually have different properties i.e. the arguments to a `DiagnosticRoutine` that require a dedicated modeling for this purpose.

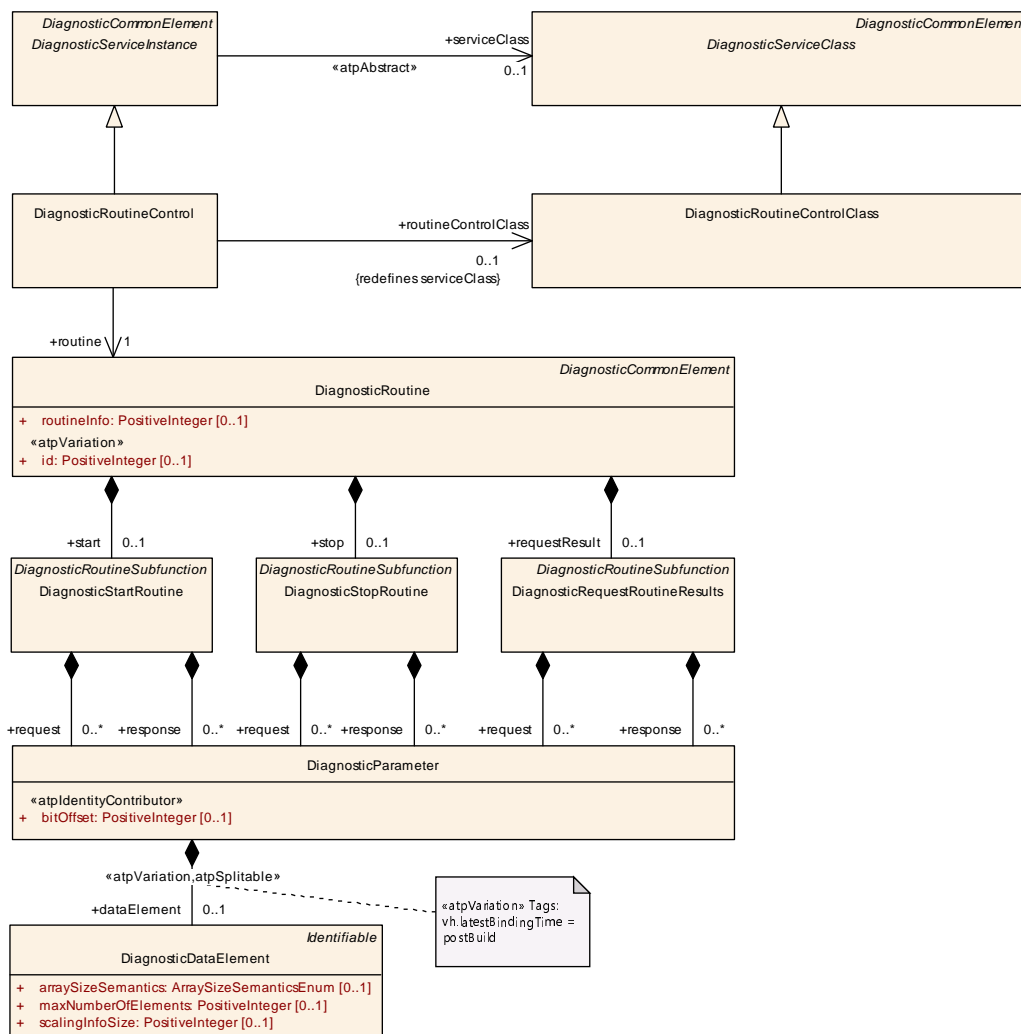

Figure 5.25: Modeling of diagnostic service `RoutineControl` (0x31)

[TPS\_DEXT\_01079] **Modeling of the arguments to a `DiagnosticRoutine`** [The arguments to a `DiagnosticRoutine` are modeled by means of `DiagnosticParameter` that is aggregated in the following roles:

- `DiagnosticStartRoutine.request`
- `DiagnosticStartRoutine.response`

- `DiagnosticStopRoutine.request`
- `DiagnosticStopRoutine.response`
- `DiagnosticRequestRoutineResults.response`
- `DiagnosticRequestRoutineResults.request`
- `DiagnosticRequestRoutineResults.response`

]([RS\\_DEXT\\_00015](#))

A `DiagnosticParameter`, in turn, aggregates a `DiagnosticDataElement` (see section 4.2) in the role `dataElement`.

**[TPS\_DEXT\_01080] Diagnostic Routine needs to be started** [ISO 14229-1 [16] does not foresee the existence of a `Diagnostic Routine` that is already executing at boot time. Therefore, a `Diagnostic Routine` needs to be started at some point in order to make sense of it.]([RS\\_DEXT\\_00015](#))

**[constr\_1339] Existence of `DiagnosticRoutine.start`** [In a complete `DiagnosticExtract`, the attribute `DiagnosticRoutine.start` shall always exist for any given `DiagnosticRoutine`.]()

**[TPS\_DEXT\_01035] Existence of `DiagnosticRoutine.stop` and `DiagnosticRoutine.requestResult`** [In contrast to `DiagnosticRoutine.start` (as clarified by [\[constr\\_1339\]](#)), the existence of `DiagnosticRoutine.stop` and `DiagnosticRoutine.requestResult` is truly optional.]([RS\\_DEXT\\_00015](#))

**[constr\_1340] Consistency of `DiagnosticServiceSwMapping` with respect to synchronously called `DiagnosticRoutines`** [Each `DiagnosticServiceSwMapping` that references a `DiagnosticRoutineControl` that only aggregates a `DiagnosticStartRoutine` in the role `start` shall only reference a `SwcServiceDependency` or `BswServiceDependency` that in turn aggregates a `DiagnosticRoutineNeeds` with attribute `diagRoutineType` set to `DiagnosticRoutineTypeEnum.synchronous`.]()

**[constr\_1341] Consistency of `DiagnosticServiceSwMapping` with respect to asynchronously called `DiagnosticRoutines`** [Each `DiagnosticServiceSwMapping` that references a `DiagnosticRoutineControl` that aggregates a `DiagnosticStopRoutine` and/or `DiagnosticRequestRoutineResults` in the role `stop` or `requestResult` shall only reference a `SwcServiceDependency` or `BswServiceDependency` that in turn aggregates a `DiagnosticRoutineNeeds` with attribute `diagRoutineType` set to `DiagnosticRoutineTypeEnum.asynchronous`.]()

**[TPS\_DEXT\_01049] Consistency of `DiagnosticServiceSwMapping` with respect to routine IDs** [For each `DiagnosticServiceSwMapping` that references a `DiagnosticRoutineNeeds` and a `DiagnosticRoutineControl`, the value of `DiagnosticRoutineNeeds.ridNumber` shall be ignored and the value of `DiagnosticRoutineControl.routine.id` shall be taken instead.]([RS\\_DEXT\\_00015](#), [RS\\_DEXT\\_00052](#))

**Figure 5.26: Permission is granted per subfunction**

The `DiagnosticRoutineControl` service is the only UDS service with both subfunction and identifier. ISO 14229-1 [16] treats the service with respect to session and security as a service with identifier.

In other words a `DiagnosticRoutine`—with its three subfunctions `start`, `stop` and `requestResult`—for the same identifier can have only `DiagnosticAccessPermission` with the same referenced `DiagnosticSession` and `DiagnosticSecurityLevel`.

However, different `DiagnosticEnvironmentalConditions` may exist for the subfunctions of a `DiagnosticRoutine` with the same identifier (`DiagnosticRoutine.id`).

**[constr\_1772] Unique `DiagnosticSession` and `DiagnosticSecurityLevel` for diagnostic routines that have the same identifier** [All `DiagnosticAccessPermissions` referenced from `DiagnosticRoutines` where attribute `DiagnosticRoutine.id` has the identical value shall refer to the identical set of `DiagnosticSession` and `DiagnosticSecurityLevel`.]()

For this purpose, the reference from the abstract base class<sup>1</sup> `DiagnosticRoutineSubfunction` to `DiagnosticAccessPermission` in the role `accessPermission` exists (see Figure 5.26).

Consequently, the reference from meta-class `DiagnosticRoutineControl` (via its abstract base class `DiagnosticServiceInstance`) to meta-class `DiagnosticAccessPermission` has no meaning.

**[constr\_1612] Reference from `DiagnosticRoutineControl` to `DiagnosticAccessPermission` has no meaning** [The reference from `DiagnosticRoutineControl` (via its abstract base class `DiagnosticServiceInstance`) in the role `accessPermission` to meta-class `DiagnosticAccessPermission` shall not be used.]()

<b>Class</b>	<b>DiagnosticRoutineNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the general needs on the configuration of the Diagnostic Communication Manager (Dcm) which are not related to a particular item (e.g. a PID). The main use case is the mapping of service ports to the Dcm which are not related to a particular item.			
<b>Base</b>	<i>ARObject</i> , <i>DiagnosticCapabilityElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Referrable</i> , <i>Service Needs</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagRoutine Type	<a href="#">DiagnosticRoutineType Enum</a>	0..1	attr	This denotes the type of diagnostic routine which is implemented by the referenced server port.

Class		DiagnosticRoutineNeeds		
ridNumber	PositiveInteger	0..1	attr	This represents a routine identifier for the diagnostic routine. This allows to predefine the RID number if the a function developer has received a particular requirement from the OEM or from a standardization body.

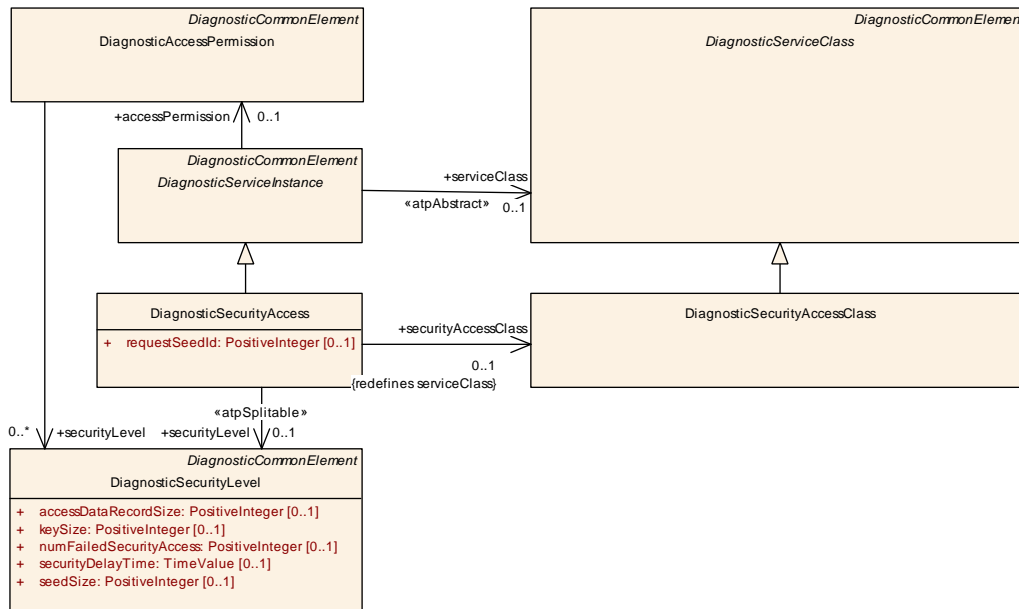

**Table 5.87: DiagnosticRoutineNeeds**

Enumeration	DiagnosticRoutineTypeEnum
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds
Note	This enumerator specifies the different types of diagnostic routines.
Literal	Description
asynchronous	This indicates that the diagnostic server is not blocked while the diagnostic routine is running. <b>Tags:</b> atp.EnumerationLiteralIndex=0
synchronous	This indicates that the diagnostic routine blocks the diagnostic server in the ECU while the routine is running. <b>Tags:</b> atp.EnumerationLiteralIndex=1

**Table 5.88: DiagnosticRoutineTypeEnum**

### 5.5.13 SecurityAccess

This chapter describes the modeling of diagnostic services *SecurityAccess* (0x27).

**Figure 5.27: Modeling of diagnostic service SecurityAccess (0x27)**

[TPS\_DEXT\_01053] Existence of **DiagnosticSecurityAccess.securityLevel**  
 [The configuration of a given **DiagnosticSecurityAccess** is considered incomplete until the reference in the role **DiagnosticSecurityAccess.securityLevel** exists.] (RS\_DEXT\_00009, RS\_DEXT\_00042)

The meaning of [TPS\_DEXT\_01053] is that the reference may be missing in intermediate steps of the configuration work flow. But at the point in time when ECU configuration is generated from the `DiagnosticExtract` the reference is needed to be able to make sense of the model for the given `DiagnosticSecurityAccess`.

Please note that (as already explained in section 5.5) the sub-functions of this service are modeled by means of the `category` attribute.

In response to conceptual differences between many other diagnostic services and `SecurityAccess`, the applicable sub-functions for the diagnostic service `SecurityAccess` are **not** defined by means of the attribute `DiagnosticSecurityAccess.category`.

**[TPS\_DEXT\_01036] Work-flow within the execution of the diagnostic service `SecurityAccess`** [The work-flow within the execution of the diagnostic service `SecurityAccess` basically boils down to the tester sending the request to obtain a *seed* from the diagnostic stack and then sending back a *key* to the stack.

Thus, the sub-functions could be generically be described as *requestSeed* and *sendKey*, which is precisely what the ISO 14229-1 [16] does.

According to this logic, the *requestSeed* could get a specific number assigned to identify the sub-function and then the *sendKey* sub-function would get assigned the number of the *requestSeed* sub-function + 1. Again, this is fully in line with the ISO 14229-1 [16].] (*RS\_DEXT\_00009*)

However, there is further dimension to take into account, namely the `DiagnosticSecurityLevel`. According to ISO 14229-1 [16], different security levels make different numbers for the sub-function identifier.

**[TPS\_DEXT\_01037] Semantics of `DiagnosticSecurityAccess.requestSeedId`** [The attribute `DiagnosticSecurityAccess.requestSeedId` shall be used to define the number of the sub-function of the diagnostic service `SecurityAccess` according to the intended security level.] (*RS\_DEXT\_00009*)

**[constr\_1342] Possible values for `DiagnosticSecurityAccess.requestSeedId`** [The value of the attribute `DiagnosticSecurityAccess.requestSeedId` shall only be set to an odd number<sup>2</sup>.

The supported value range consists of the following list:

- all odd numbers in the closed interval **0x01 .. 0x41**
- **0x5F** (this corresponds to the case of *end-of-life activation of on-board pyrotechnic devices according to ISO 26021-2 [17]*)
- all odd numbers in the closed interval **0x61 .. 0x7E**

]()

---

<sup>2</sup>The even numbers are reserved for the identification of the corresponding *sendKey* sub-function, as explained by [TPS\_DEXT\_01036].

In contrast to a similar situation in the case of the diagnostic service `SessionControl` (see section 5.5.14), there is no real evidence that a `DiagnosticSecurityLevel` always exists before the referencing `DiagnosticSecurityAccess` is created in order to properly establish the reference in the role `DiagnosticSecurityAccess.securityLevel`.

**[TPS\_DEXT\_01038] Motivation for making the reference `DiagnosticSecurityAccess.securityLevel` `<<atpSplittable>>`** [The reference `DiagnosticSecurityAccess.securityLevel` needs to be decorated with the stereotype `<<atpSplittable>>` in order to advertise the idea that the reference to a corresponding `DiagnosticSecurityLevel` is created (potentially in a different artifact) some time after the actual creation of the given `DiagnosticSecurityAccess`.] ([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00009](#), [RS\\_DEXT\\_00042](#))

Of course, if the `DiagnosticSecurityLevel` factually exists before the definition of `DiagnosticSecurityAccess` the reference can directly be inserted into the model.

<b>Class</b>	<b>DiagnosticSecurityAccess</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::SecurityAccess			
<b>Note</b>	This represents an instance of the "Security Access" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticSecurityAccess			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
-	-	-	-	-

**Table 5.90: DiagnosticSecurityAccessClass**

### 5.5.14 SessionControl

This chapter describes the modeling of diagnostic services `SessionControl` (0x10). The obvious goal of the service is to support the switching from one diagnostic session to another.

**[TPS\_DEXT\_01081] Modeling of `DiagnosticSessionControl`** [For the purpose of providing a means to specify the switching from one diagnostic session to another diagnostic session, `DiagnosticSessionControl` refers to a `DiagnosticSession` in the role `diagnosticSession`.] ([RS\\_DEXT\\_00003](#), [RS\\_DEXT\\_00040](#))

**Figure 5.28: Modeling of diagnostic service `SessionControl` (0x10)**

According to ISO 14229-1 [16], the diagnostic service `SessionControl` defines sub-functions.

**[TPS\_DEXT\_01039] Identification of the sub-function of `DiagnosticSessionControl`** [In the case of `DiagnosticSessionControl` it would not be a good idea

to encode the applicable sub-function by means of the attribute `DiagnosticSessionControl.category`.

Actually, the possible sub-functions are strongly related to the concept of the diagnostic session, represented by the meta-class `DiagnosticSession`.

The latter, in turn, has an attribute `id` that directly corresponds to the number of the applicable sub-function for `DiagnosticSessionControl`.

In other words, the sub-function of `DiagnosticSessionControl` is identified by means of the reference `DiagnosticSessionControl.diagnosticSession`.] ([RS\\_DEXT\\_0003](#), [RS\\_DEXT\\_00051](#))

**[TPS\_DEXT\_01082] Existence of `DiagnosticSessionControl.diagnosticSession`** [The idea of modeling the sub-function of `DiagnosticSessionControl` by means of the reference `DiagnosticSessionControl.diagnosticSession` implies that the applicable `DiagnosticSession` already exists at the time when the given `DiagnosticSessionControl` is created.

It is assumed that this will always be the case because the definition of `DiagnosticSessions` is part of laying the groundwork<sup>3</sup> for diagnostic communication.]([RS\\_DEXT\\_0003](#), [RS\\_DEXT\\_00040](#))

It is hard to foresee a scenario where the `DiagnosticSessions` are defined near the very end of the work-flow that leads to a complete `DiagnosticExtract`.

<b>Class</b>	<code>DiagnosticSessionControl</code>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dcm::DiagnosticService::SessionControl			
<b>Note</b>	This represents an instance of the "Session Control" diagnostic service. <b>Tags:</b> atp.recommendedPackage=DiagnosticSessionControls			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticServiceInstance</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

**Table 5.94: DiagnosticRequestFileTransferClass**

## 5.6 OBD Diagnostic Services supported by AUTOSAR

Support for diagnostic services for on-board diagnostics (OBD) [18] requires the definition of further meta-classes similar to e.g. [DiagnosticDataIdentifier](#) or [DiagnosticRoutine](#).

[TPS\_DEXT\_01092] **Semantics of [DiagnosticParameterIdentifier](#)** [The meta-class [DiagnosticParameterIdentifier](#) is used to reflect the concept of the so-called Parameter Identifiers (PID) in the diagnostic extract. A [DiagnosticParameterIdentifier](#) defines the following properties:

- Each [DiagnosticParameterIdentifier](#) gets a numerical ID carried in the attribute [DiagnosticParameterIdentifier.id](#).
- [DiagnosticParameterIdentifier](#) may also contain a so-called *Support Info Byte*, modeled as [DiagnosticSupportInfoByte](#).
- The definition of a [DiagnosticParameterIdentifier](#) also contains a list of data associated with the PID. This list is modeled as an aggregation of [DiagnosticParameter](#).

]([RS\\_DEXT\\_00068](#))

As already mentioned in [TPS\_DEXT\_01092], the [DiagnosticParameterIdentifier](#) shall not be confused with the [DiagnosticParameter](#). The latter is used

“inside” the definition of `DiagnosticParameterIdentifier`, but also in `DiagnosticDataIdentifier` or `DiagnosticRoutine`, to define one (out of potentially many) piece of information held in the scope of a `DiagnosticParameterIdentifier`.

**[constr\_1447] Restrictions for the value of `DiagnosticParameterIdentifier.id`** [The values 0x00, 0x20, 0x40, 0x60, 0x80, 0xA0, 0xC0, and 0xE0 are not allowed to appear in the value of `DiagnosticParameterIdentifier.id`.]()

**[constr\_1448] Interval of `DiagnosticParameterIdentifier.id`** [The allowed interval for values of `DiagnosticParameterIdentifier.id` shall not exceed [0..255].]()

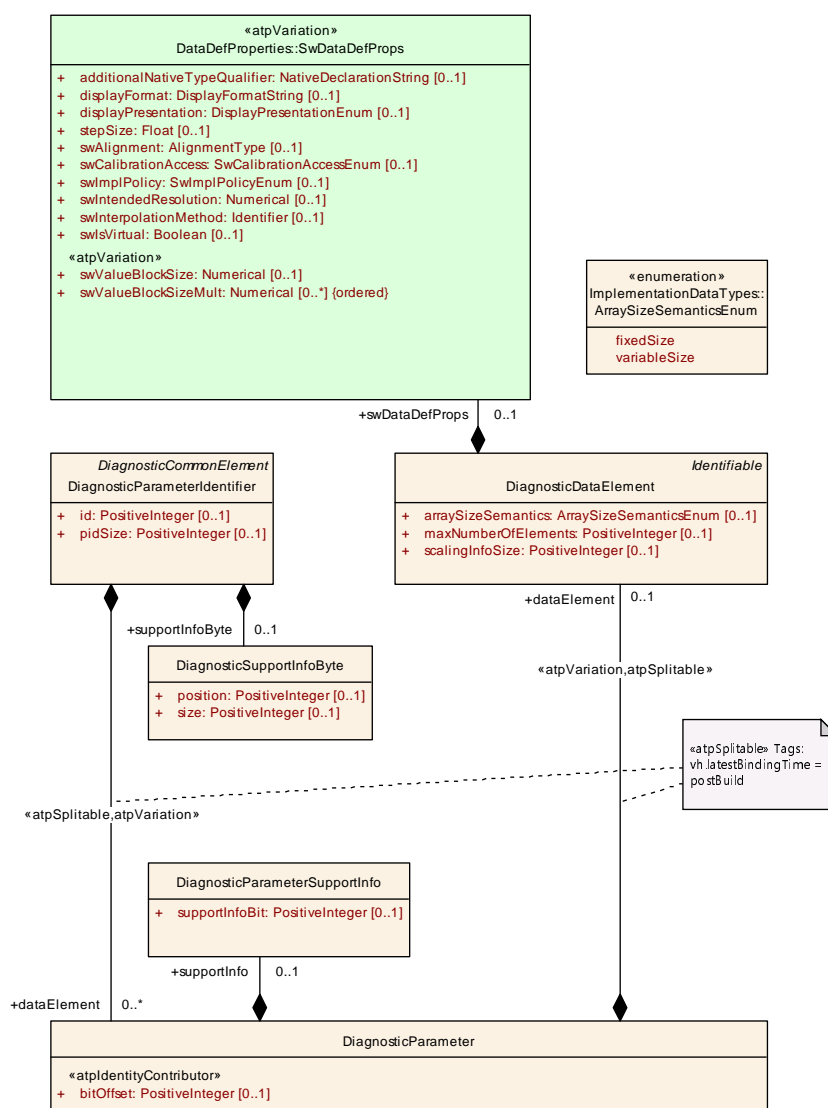

Figure 5.30: Modeling of the `DiagnosticParameterIdentifier`

**[constr\_1449] PID shall only carry a fixed-length collection of data** [The value of `DiagnosticParameterIdentifier.dataElement.dataElement.arraySizeSemantics` shall not be set to `variableSize`.]()

**[constr\_1750] Existence of attribute [DiagnosticParameterIdentifier.pidSize](#)** [Attribute [DiagnosticParameterIdentifier.pidSize](#) is only relevant if a gap exists at the end of the [DiagnosticParameterIdentifier](#). If this gap does not exist, the size of the [DiagnosticParameterIdentifier](#) can be computed.] ()

<b>Class</b>	<b>DiagnosticParameterIdentifier</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::CommonDiagnostics			
<b>Note</b>	This meta-class represents the ability to model a diagnostic parameter identifier (PID) for the purpose of executing on-board diagnostics (OBD). <b>Tags:</b> atp.recommendedPackage=DiagnosticParameterIdentifiers			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataElement	<a href="#">DiagnosticParameter</a>	*	aggr	This represents the data carried by the DiagnosticParameterIdentifier. <b>Stereotypes:</b> atpSplittable; atpVariation <b>Tags:</b> atp.Splitkey=dataElement.bitOffset, dataElement.variationPoint.shortLabel vh.latestBindingTime=postBuild
id	PositiveInteger	0..1	attr	This is the numerical identifier used to identify the DiagnosticParameterIdentifier in the scope of diagnostic workflow (see SAE J1979-DA).
pidSize	PositiveInteger	0..1	attr	The size of the entire PID can be greater than the sum of the data elements because padding might be applied. Unit: byte.
supportInfoByte	<a href="#">DiagnosticSupportInfoByte</a>	0..1	aggr	This represents the supported information associated with the DiagnosticParameterIdentifier.

**Table 5.95: DiagnosticParameterIdentifier**

**[constr\_1819] Existence of attribute [DiagnosticParameterIdentifier.id](#)** [For each [DiagnosticParameterIdentifier](#), attribute **id** shall exist **at the time when the derivation to Ecuc starts.**] ()

<b>Class</b>	<b>DiagnosticParameterSupportInfo</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::CommonDiagnostics			
<b>Note</b>	This represents a way to define which bit of the supportInfo is representing this part of the PID			
<b>Base</b>	<a href="#">ARObject</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
supportInfoBit	PositiveInteger	0..1	attr	defines the bit in the SupportInfo byte, which represents the PID DataElement pidSize / position / size. Unit: byte.

**Table 5.96: DiagnosticParameterSupportInfo**

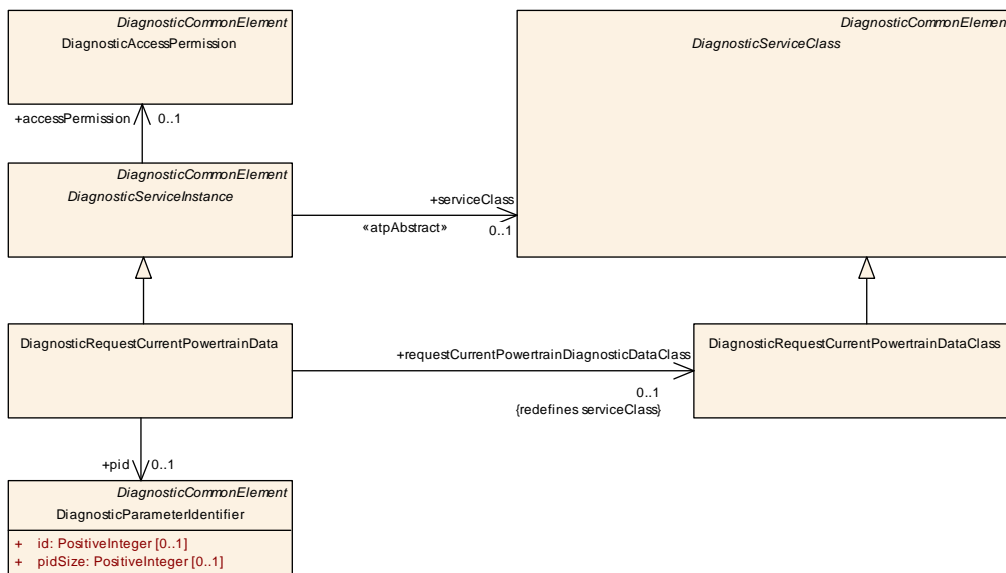

<b>Class</b>	<b>DiagnosticSupportInfoByte</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::CommonDiagnostics			
<b>Note</b>	This meta-class defines the support information (typically byte A) to declare the usability of the Data Elements within the so-called packeted PIDs (e.g. PID\$68).			
<b>Base</b>	ARObject			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
position	PositiveInteger	0..1	attr	This represents the position of the supportInfo in the PID. Unit: byte.
size	PositiveInteger	0..1	attr	This represents the size of the supportInfo within the PID. Unit: byte.

**Table 5.97: DiagnosticSupportInfoByte**

### 5.6.1 OBD Mode 0x01 (RequestCurrentPowertrainDiagnosticData)

The service RequestCurrentPowertrainDiagnosticData is modeled in Figure 5.31.

**[TPS\_DEXT\_01125] Support for diagnostic service RequestCurrentPowertrainDiagnosticData** [The modeling support for the OBD diagnostic service RequestCurrentPowertrainDiagnosticData utilizes the new meta-class DiagnosticParameterIdentifier such that the meta-class DiagnosticRequestCurrentPowertrainData maintains a reference to DiagnosticParameterIdentifier in the role pid.] ([RS\\_DEXT\\_00069](#))

**Figure 5.31: Modeling of diagnostic service for OBD Mode 0x01**

## 5.7 UDS Diagnostic Services for supporting WWH-OBD

[TPS\_DEXT\_01133] **Support for WWH-OBD within the diagnostic extract** [A support for WWH-OBD [19] within the diagnostic extract involves the usage of the following UDS services and their respective subfunctions:

**DiagnosticReadDataByIdentifier** (0x22) where the value of attribute `DiagnosticDataIdentifier.id` inside the interval defined by the OBD range, i.e.:

- F400-F4FF
- F600-F6FF
- F800-F8FF

Please note that the usage of this diagnostic service in an implementation of WWH-OBD corresponds to the existence of a `DiagnosticValueNeeds` on the side of an `AtomicSwComponentType` that interacts with the diagnostic service.

**DiagnosticRoutineControl** (0x31) where the value of attribute `DiagnosticRoutine.id` is inside the interval defined by the OBD range, i.e. E000-E0FF. Please note that the usage of this diagnostic service in an implementation of WWH-OBD corresponds to the existence of a `DiagnosticRoutineNeeds` on the side of an `AtomicSwComponentType` that implements routines executed within the diagnostic service.

**DiagnosticClearDiagnosticInformation** (0x14)

**DiagnosticReadDTCInformation** (0x19) with the subfunctions (0x4, 0x6, 0x42)

](*RS\_DEXT\_00077*)

When used in a WWH-OBD environment, meta-class `DiagnosticRoutine` utilizes the attribute `routineInfo` to support the configuration of the diagnostic response. In a pure UDS environment (except in an application of ISO 26021 [17]) the attribute has no semantics.

## 5.8 Diagnostic Service Mapping

Automotive diagnostics interacts with both application software and basic software in various ways that can be formalized using the AUTOSAR meta-model. This chapter contains a description of the formalization of this interaction along with the applicable constraints.

[TPS\_DEXT\_01040] **Use case where the `DiagnosticExtract` refers to software-components** [This is a list of the potential use case where the `DiagnosticExtract` refers to software-components in general and `PortPrototypes` in the context of either `CompositionSwComponentTypes` or `AtomicSwComponentTypes`:

- `DiagnosticExtract` refers to `PortPrototype` (for the access to `dataElement`) or `SwcServiceDependency` in the context of a `AtomicSwComponentType` embedded in the hierarchy created by the `rootSoftwareComposition`.
- `DiagnosticExtract` refers to a `PortPrototype`(for the access to `dataElement`) or `SwcServiceDependency` in the context of a `AtomicSwComponentType` embedded in the hierarchy created by a `CompositionSwComponentType` that is nowhere aggregated (for the time being).
- `DiagnosticExtract` refers to a `PortPrototype` (for the access to `dataElement`) or `SwcServiceDependency` in the context of an `AtomicSwComponentType`.
- `DiagnosticExtract` refers to a `BswServiceDependency`.

]([RS\\_DEXT\\_00052](#))

<b>Class</b>	<b>SwcServiceDependency</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior::ServiceMapping			
<b>Note</b>	Specialization of ServiceDependency in the context of an SwcInternalBehavior. It allows to associate ports, port groups and (in special cases) data defined for an atomic software component to a given ServiceNeeds element.			
<b>Base</b>	<i>ARObject, AtpClassifier, AtpFeature, AtpStructureElement, Identifiable, MultilanguageReferrable, Referrable, ServiceDependency</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

- The [BswServiceDependencyIdent](#) referenced by the same [DiagnosticServiceSwMapping](#) shall aggregate an [ObdPidServiceNeeds](#) in the role [serviceNeeds](#).

]()

**[constr\_1451] Service mapping for OBD mode 0x09 for [DiagnosticInfoType](#)** [if a [DiagnosticServiceSwMapping](#) refers to [DiagnosticRequestVehicleInfo](#) and a [DiagnosticDataElement](#) that is aggregated by a [DiagnosticInfoType](#) then one of two alternative model configurations shall exist:

- The [SwcServiceDependency](#) referenced by the same [DiagnosticServiceSwMapping](#) shall aggregate a [ObdInfoServiceNeeds](#) in the role [serviceNeeds](#).

- The `BswServiceDependencyIdent` referenced by the same `DiagnosticServiceSwMapping` shall aggregate an `ObdInfoServiceNeeds` in the role `serviceNeeds`.

]()

[constr\_1452] Service mapping for OBD mode 0x08 for `DiagnosticInfoType` [if a `DiagnosticServiceSwMapping` refers to a `DiagnosticRequestControlOnBoardDevice` then the `SwcServiceDependency` referenced by the same `DiagnosticServiceSwMapping` shall aggregate an `ObdControlServiceNeeds` in the role `serviceNeeds`.]()

<b>Class</b>	<b>ObdInfoServiceNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the abstract needs of a component or module on the configuration of OBD Services in relation to a given InfoType (OBD Service 09) which is supported by this component or module.			
<b>Base</b>	<i>ARObject</i> , <i>DiagnosticCapabilityElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Referrable</i> , <i>Service Needs</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataLength	PositiveInteger	0..1	attr	This attribute is applicable only if the ServiceNeeds is aggregated within BswModuleDependency.  This attribute represents the length of data (in bytes) provided for this InfoType.
infoType	PositiveInteger	0..1	attr	The InfoType according to ISO 15031-5

**Table 5.119: ObdInfoServiceNeeds**

<b>Class</b>	<b>ObdPidServiceNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the abstract needs of a component or module on the configuration of OBD Services in relation to a particular PID (parameter identifier) which is supported by this component or module.  In case of using a client/server communicated value, the related value shall be communicated via the port referenced by assignedPort. The details of this communication (e.g. appropriate naming conventions) are specified in the related software specifications (SWS).			
<b>Base</b>	<i>ARObject</i> , <i>DiagnosticCapabilityElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Referrable</i> , <i>Service Needs</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataLength	PositiveInteger	0..1	attr	This attribute is applicable only if the ServiceNeeds is aggregated within BswModuleDependency.  This attribute represents the length of data (in bytes) provided for this particular PID signal.
parameterId	PositiveInteger	0..1	attr	Standardized parameter identifier (PID) according to the OBD standard specified in attribute "standard".
standard	String	0..1	attr	Annotates the standard according to which the PID is given, e.g. "ISO15031-5" or "SAE J1979 Rev May 2007".

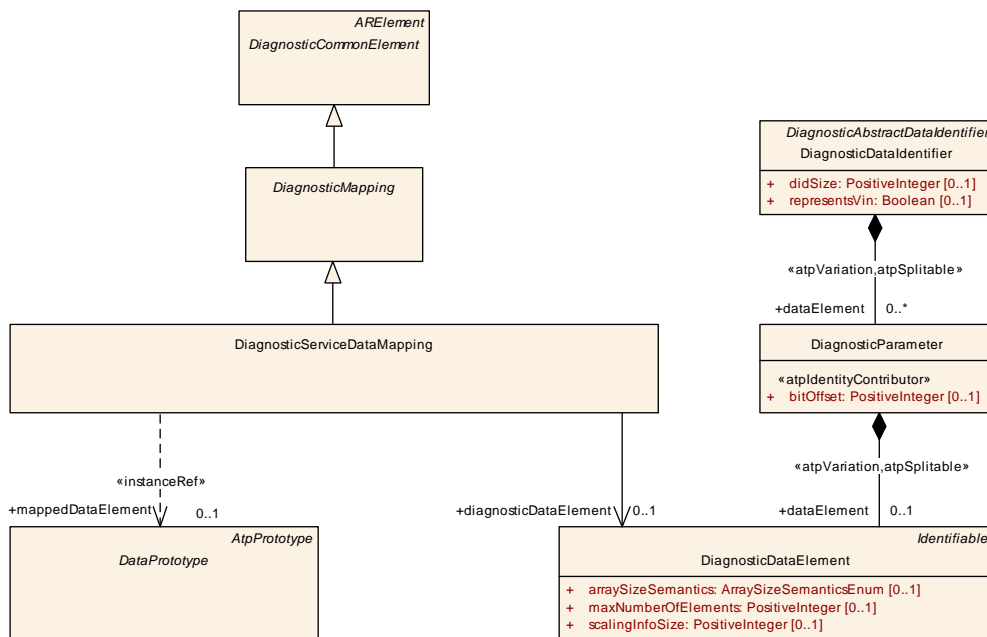

**Table 5.120: ObdPidServiceNeeds**

<b>Class</b>	<b>ObdControlServiceNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the abstract needs of a component or module on the configuration of OBD Service 08 (request control of on-board system) in relation to a particular test-Identifier (TID) supported by this component or module.			
<b>Base</b>	ARObject, DiagnosticCapabilityElement, Identifiable, MultilanguageReferrable, Referrable, Service Needs			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
testId	PositiveInteger	0..1	attr	Test Identifier (TID) according to ISO 15031-5.

**Table 5.121: ObdControlServiceNeeds**

### 5.8.1 Diagnostic Service Data Mapping

Please note that the Dcm is in general entitled to both read and write a `dataElement`. This applies even if the corresponding `PortPrototype` is a `PPortPrototype`. This means that the diagnostic service data mapping is limited to `SenderReceiverInterface`.

**Figure 5.40: Dcm service data mapping**

If several `DiagnosticServiceDataMappings` exist that refer to the context of the same `VariableDataPrototype` and different `DiagnosticDataElements` aggregated by the same `DiagnosticDataIdentifier` then this is a strong indication that an atomic access to a structured data type is intended.

The association of elements of the data structure to `DiagnosticDataElements` is implicitly given by means of matching `shortName` or by explicit references into the internals of the `VariableDataPrototype`.

Please note that this approach of associating elements of a composite data structure to `DiagnosticDataElements` of one `DiagnosticDataIdentifier` based on the `shortName` can only work if the depth of the composite data structure is limited to 1.

**[TPS\_DEXT\_01041] Semantics of attribute `DiagnosticServiceDataMapping.diagnosticDataElement`** [By means of the attribute `DiagnosticServiceDataMapping.diagnosticDataElement` it is possible to specify that the Dcm has access to

- a `dataElement` in a `PortPrototype` typed by a `SenderReceiverInterface` or
- an `nvData` in a `PortPrototype` typed by an `NvDataInterface`.

This type of data access is suitable for the diagnostic services `ReadDataByIdentifier` (0x22), `WriteDataByIdentifier` (0x2E), and `InputOutputControl` (0x2F).] ([RS\\_DEXT\\_00052](#))

<b>Class</b>	<b>DiagnosticServiceDataMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::ServiceMapping			
<b>Note</b>	This represents the ability to define a mapping of a diagnostic service to a software-component. This kind of service mapping is applicable for the usage of <code>SenderReceiverInterfaces</code> or event/notifier semantics in <code>ServiceInterfaces</code> on the adaptive platform. <b>Tags:</b> atp.recommendedPackage=DiagnosticServiceMappings			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnosticDataElement	<a href="#">DiagnosticDataElement</a>	0..1	ref	This represents the applicable payload that corresponds to the referenced <code>DataPrototype</code> in the role <code>mappedDataElement</code> or (in case of a usage on the adaptive platform) <code>mappedApDataElement</code> .
mappedDataElement	<a href="#">DataPrototype</a>	0..1	iref	This represents the <code>dataElement</code> in the application software that is accessed for diagnostic purpose. This role is applicable on the classic platform. <b>InstanceRef implemented by:</b> <a href="#">DataPrototypeInSystemInstanceRef</a>

**Table 5.122: DiagnosticServiceDataMapping**

**[constr\_1828] Existence of referenced from `DiagnosticServiceDataMapping`** [For each `DiagnosticServiceDataMapping`, the following references shall exist at the time when the DEXT is complete:

- Reference to `DiagnosticDataElement` in the role `diagnosticDataElement`
- Reference to `DataPrototype` in the role `mappedDataElement`

]()

**[constr\_1343] Simultaneous existence of the attributes `DiagnosticServiceDataMapping.diagnosticDataElement` and `DiagnosticDataByIdentifier`.**

**dataIdentifier** [A `DiagnosticServiceDataMapping.diagnosticDataElement` shall also be aggregated by a `DiagnosticDataByIdentifier` in the role `dataIdentifier.dataElement.dataElement.`]

Please note that [constr\_1343] shall only apply for the step in the methodology where the `DiagnosticExtract` is considered complete to the point that the configuration of the Dcm and Dem can be derived. Any intermediate step, e.g. hand-over from OEM to tier-1 supplier does not actually enforce [constr\_1343].

In other words, [constr\_1343] makes sure that there is a connection between the `DiagnosticServiceDataMapping` and the corresponding `DiagnosticReadDataByIdentifier` or `DiagnosticWriteDataByIdentifier`.

Only by this means the diagnostic service becomes fully usable.

**[constr\_1344] Condition for the identification of data types of attributes `DiagnosticServiceDataMapping.mappedDataElement`** [`DiagnosticServiceDataMapping.mappedDataElement` shall be typed by either:

- `ApplicationPrimitiveDataType` where the value of attribute `category` is set to VALUE.
- `ApplicationArrayDataType` where the value of attribute `element.category` is set to VALUE.

]

Rationale: the `DiagnosticServiceDataMapping.mappedDataElement` is mapped to a single `DiagnosticDataElement` that in turn can only be a primitive value or an array of primitive values.

Also, the modeling of the reference `DiagnosticServiceDataMapping.mappedDataElement` only supports the case where the target `DataPrototype` is typed by an `ApplicationDataType`.

<b>Class</b>	<b>ApplicationPrimitiveDataType</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
<b>Note</b>	A primitive data type defines a set of allowed values. <b>Tags:</b> atp.recommendedPackage=ApplicationDataTypes			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">ApplicationDataType</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">AutosarDataType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
-	-	-	-	-

**Table 5.123: ApplicationPrimitiveDataType**

<b>Class</b>	<b>ImplementationDataType</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ImplementationDataTypes			
<b>Note</b>	Describes a reusable data type on the implementation level. This will typically correspond to a typedef in C-code. <b>Tags:</b> atp.recommendedPackage=ImplementationDataTypes			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AbstractImplementationDataType</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">AutosarDataType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dynamicArraySizeProfile	String	0..1	attr	Specifies the profile which the array will follow in case this data type is a variable size array.
isStructWithOptionalElement	Boolean	0..1	attr	This attribute is only valid if the attribute category is set to STRUCTURE.  If set to True, this attribute indicates that the ImplementationDataType has been created with the intention to define at least one element of the structure as optional.
subElement (ordered)	ImplementationDataTypeElement	*	aggr	Specifies an element of an array, struct, or union data type.  The aggregation of ImplementationDataTypeElement is subject to variability with the purpose to support the conditional existence of elements inside a ImplementationDataType representing a structure.  <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
symbolProps	SymbolProps	0..1	aggr	This represents the SymbolProps for the ImplementationDataType.  <b>Stereotypes:</b> atpSplittable <b>Tags:</b> atp.Splitkey=symbolProps.shortName
typeEmitter	<a href="#">NameToken</a>	0..1	attr	This attribute is used to control which part of the AUTOSAR toolchain is supposed to trigger data type definitions.

**Table 5.124: ImplementationDataType**

In other words, [constr\_1344] requires that both [DiagnosticServiceDataMapping.mappedDataElement](#)<sup>4</sup> and [DiagnosticServiceDataMapping.diagnosticDataElement](#) shall be typed by a primitive data type.

Please refer to [8] for a detailed explanation of the meaning of the value of a data type category.

**[constr\_1345] DiagnosticDataElement shall not (finally) be aggregated by a DiagnosticRoutine** [A [DiagnosticDataElement](#) that is referenced by a [DiagnosticServiceDataMapping](#) shall not (finally) be aggregated by a [DiagnosticRoutine](#).]()

**[TPS\_DEXT\_01042] Dem uses DiagnosticServiceDataMapping** [There is a use case for the Dem to utilize a [DiagnosticServiceDataMapping](#) such that elements of a [DiagnosticExtendedDataRecord](#) are fetched from [dataElements](#) in an [ApplicationSwComponentType](#).

<sup>4</sup>[DiagnosticServiceDataMapping.mappedDataElement](#) can be an element of a (potentially large) composite data type. The utility of this is that this way the footprint of the data access to the payload of request and response messages can be kept as low as possible.

Therefore, [constr\_1345] does intentionally not exclude the aggregation of `DiagnosticDataElement` by `DiagnosticExtendedDataRecord` in the context of `DiagnosticServiceDataMapping`.] ([RS\\_DEXT\\_00052](#))

<b>Class</b>	<b>ApplicationSwComponentType</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Components			
<b>Note</b>	The ApplicationSwComponentType is used to represent the application software. <b>Tags:</b> atp.recommendedPackage=SwComponentTypes

<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table 5.125: ApplicationSwComponentType**

[constr\_1584] **DiagnosticDataElement shall not be used more than once in I/O Control instance** [A given `DiagnosticDataElement` shall not be used by more than one `DiagnosticServiceDataMapping` that in turn refers to a `DataPrototype` defined in the context of a `DataInterface` that is used to type a `PortPrototype` that in turn is referenced by a `RoleBasedPortAssignment` where attribute `role` is set to the value `IOControlRequest`.]()

## 5.8.2 Diagnostic Service Software Mapping

The diagnostic service software mapping is limited to `ClientServerInterface` or a direct function call (in the case of basic software or complex driver).

<b>Class</b>	<b>ClientServerInterface</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
<b>Note</b>	A client/server interface declares a number of operations that can be invoked on a server by a client. <b>Tags:</b> atp.recommendedPackage=PortInterfaces			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">PortInterface</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
operation	ClientServerOperation	*	aggr	ClientServerOperation(s) of this ClientServerInterface. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=blueprintDerivationTime
possibleError	ApplicationError	*	aggr	Application errors that are defined as part of this interface.

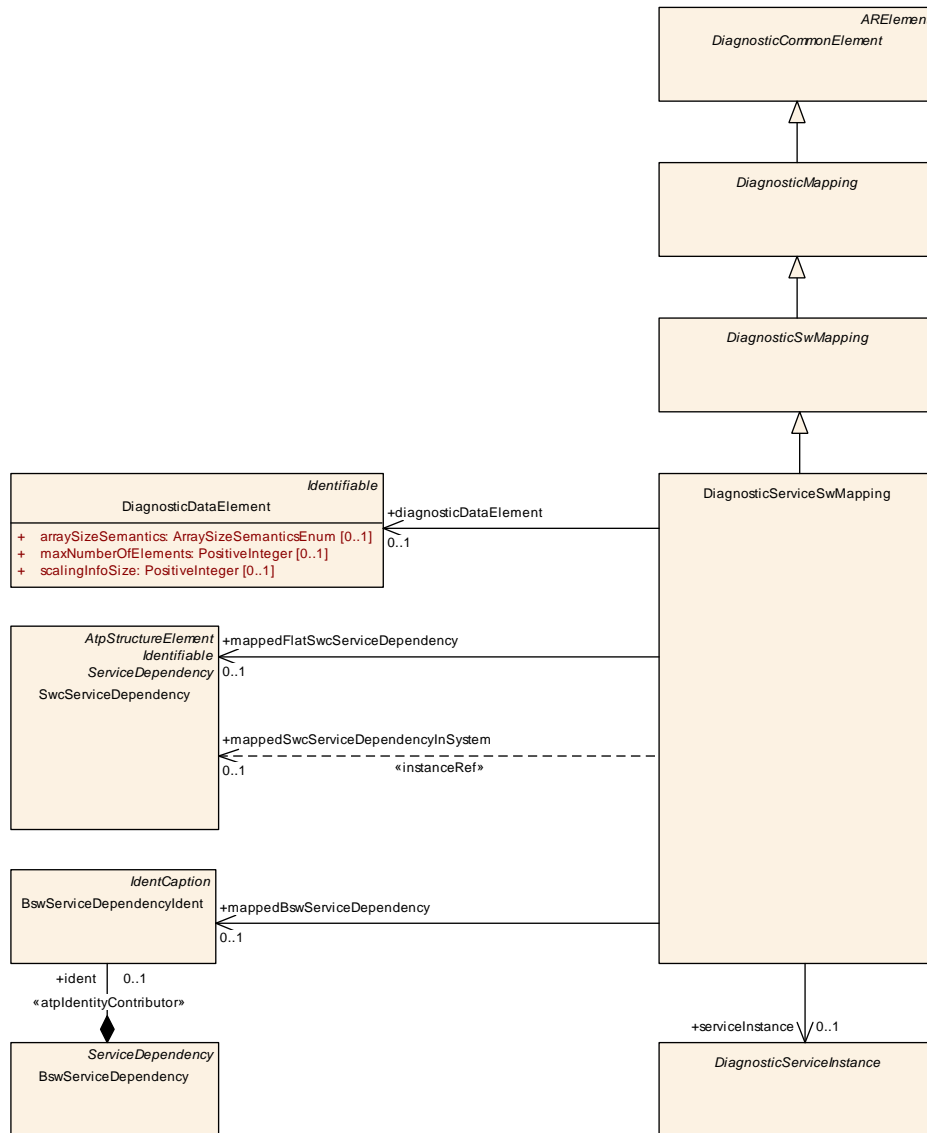

**Table 5.126: ClientServerInterface**

The following constraint only applies to the case where I/O Control is implemented via sender-receiver-communication (see [TPS\_SWCT\_01654])

[TPS\_DEXT\_01043] **Purpose of DiagnosticServiceSwMapping** [The meta-class `DiagnosticServiceSwMapping` has been introduced to support the creation of

a relationship between the definition of a given diagnostic service to the *SwcServiceDependency* (if the service applies to the application software) or *BswServiceDependency* (if the service applies to the basic software).] (*RS\_DEXT\_00052*)

It is required to use the applicable form of reference to the target *SwcServiceDependency* depending on the context of the enclosing *AtomicSwComponentType*.

**Figure 5.41: Dcm service software mapping**

<b>Class</b>	<i>DiagnosticSwMapping</i> (abstract)
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::ServiceMapping
<b>Note</b>	This represents the ability to define a mapping between a diagnostic information (at this point there is no way to become more specific about the semantics) to a software-component.

<b>Class</b>	<i>DiagnosticSwMapping</i> (abstract)			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">DiagnosticEnableConditionPortMapping</a> , <a href="#">DiagnosticEventPortMapping</a> , <a href="#">DiagnosticFimFunctionMapping</a> , <a href="#">DiagnosticOperationCyclePortMapping</a> , <a href="#">DiagnosticServiceSwMapping</a> , <a href="#">DiagnosticStorageConditionPortMapping</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table 5.127: DiagnosticSwMapping**

<b>Class</b>	<b>DiagnosticServiceSwMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::ServiceMapping			
<b>Note</b>	This represents the ability to define a mapping of a diagnostic service to a software-component or a basic-software module. If the former is used then this kind of service mapping is applicable for the usage of ClientServerInterfaces. <b>Tags:</b> atp.recommendedPackage=DiagnosticServiceMappings			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">DiagnosticSwMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnosticDataElement	<a href="#">DiagnosticDataElement</a>	0..1	ref	This represents a <a href="#">DiagnosticDataElement</a> required to execute the respective diagnostic service in the context of the diagnostic service mapping,
mappedBswServiceDependency	<a href="#">BswServiceDependencyIdent</a>	0..1	ref	This is supposed to represent a reference to a <a href="#">BswServiceDependency</a> . the latter is not derived from <a href="#">Referrable</a> and therefore this detour needs to be implemented to still let <a href="#">BswServiceDependency</a> become the target of a reference.
mappedFlatSwcServiceDependency	<a href="#">SwcServiceDependency</a>	0..1	ref	This represents the ability to refer to an <a href="#">AtomicSwComponentType</a> that is available without the definition of how it will be embedded into the component hierarchy.
mappedSwcServiceDependencyInSystem	<a href="#">SwcServiceDependency</a>	0..1	iref	This represents the ability to point into the component hierarchy (under possible consideration of the root <a href="#">SoftwareComposition</a> ) <b>InstanceRef implemented by:</b> <a href="#">SwcServiceDependencyInSystemInstanceRef</a>
serviceInstance	<a href="#">DiagnosticServiceInstance</a>	0..1	ref	This represents the service instance that needs to be considered in this diagnostics service mapping.

**Table 5.128: DiagnosticServiceSwMapping**

[TPS\_DEXT\_01044] [BswServiceDependency](#) needs to act as the target of a reference [The intention of [DiagnosticServiceSwMapping.mappedBswServiceDependency](#) is to refer to a [BswServiceDependency](#) in the same way as e.g. [DiagnosticServiceSwMapping.mappedFlatSwcServiceDependency](#) does.

However, [BswServiceDependency](#) is not derived from meta-class [Referrable](#) and can therefore never become the target of a reference like [DiagnosticServiceSwMapping.mappedBswServiceDependency](#).

The remedy for this issue is to define meta-class [BswServiceDependencyIdent](#) that inherits from [IdentCaption](#) that in turn inherits from [Referrable](#).

Then, by aggregating `BswServiceDependencyIdent` at `BswServiceDependency` in the role `ident` `BswServiceDependency` can **factually** become the target of the reference and thus the original idea of `DiagnosticServiceSwMapping.mappedBswServiceDependency` becomes feasible. ](*RS\_DEXT\_00052*)

Please find further details in Figure 5.41.

Please note that the introduction [*TPS\_DEXT\_01044*], although being dangerously close to a hack, is necessary to keep the AUTOSAR XML Schema fully backwards-compatible.

In other words, if `BswServiceDependency` were updated to inherit from `Referrable` the consequence would be that all existing AUTOSAR models that contain instances `BswServiceDependency` would suddenly become invalid because `Referrable.shortName` is a mandatory attribute in the AUTOSAR XML Schema.

<b>Class</b>	<b>BswServiceDependencyIdent</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::ServiceMapping			
<b>Note</b>	This meta-class is created to add the ability to become the target of a reference to the non-Referrable <code>BswServiceDependency</code> .			
<b>Base</b>	<i>ARObject, AtpClassifier, AtpFeature, AtpStructureElement, IdentCaption, Identifiable, Multilanguage Referrable, Referrable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
-	-	-	-	-

**Table 5.129: BswServiceDependencyIdent**

**[constr\_1346] Allowed values of `DiagnosticServiceSwMapping.serviceInstance`** [The applicability of the `DiagnosticServiceSwMapping` is limited to pre-defined set of diagnostic services.

By regulation of the AUTOSAR standard, `DiagnosticServiceSwMapping.serviceInstance` shall only point to the following sub-classes of `DiagnosticServiceInstance`:

- `DiagnosticRoutine`
- `DiagnosticSecurityAccess`
- `DiagnosticReadDataByIdentifier`
- `DiagnosticWriteDataByIdentifier`
- `DiagnosticIOControl`

]()

**[constr\_1347] Existence of attributes of `DiagnosticServiceSwMapping`** [For any given `DiagnosticServiceSwMapping`, **one and only one** of the following references shall exist:

- `DiagnosticServiceSwMapping.mappedFlatSwcServiceDependency`

- `DiagnosticServiceSwMapping.mappedSwcServiceDependencyInSystem`
- `DiagnosticServiceSwMapping.mappedBswServiceDependency`

)]()

[[constr\\_1347](#)], among further clarifications, reflects the fact that at most a single `SwcServiceDependency` can be referenced by a `DiagnosticServiceSwMapping` and this `SwcServiceDependency` cannot be identified by both `mappedSwcServiceDependencyInSystem` and `mappedFlatSwcServiceDependency`.

### 5.8.3 Security Event Reporting Mode Mapping

The reporting mode of particular security events (see [[20](#)]) can be updated via diagnostic services.

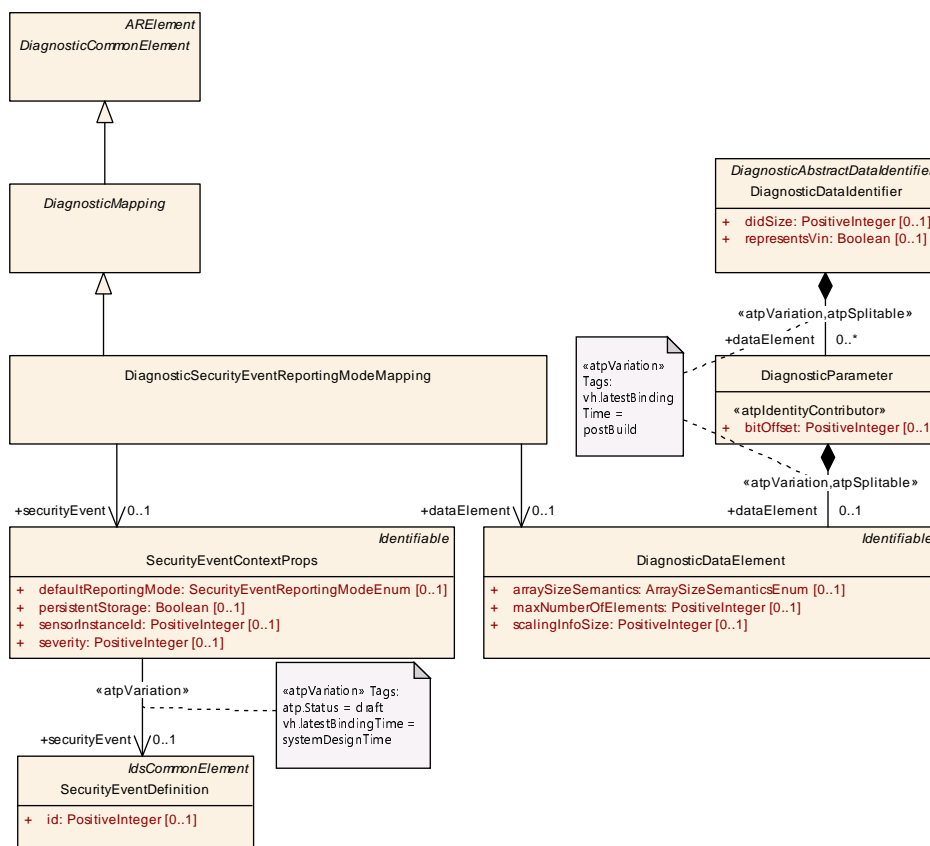

Figure 5.42: Modeling of the security event reporting mode mapping

[TPS\_DEXT\_01152]{DRAFT} **Semantics of meta-class `DiagnosticSecurityEventReportingModeMapping`** [For this purpose, it is necessary to reserve a spot in a DID over which the new value for the reporting mode can be transferred from a diagnostic tester to the diagnostic stack on the target Ecu, and from there to the IdsM [[21](#)].

From the modeling point of view, this relation is created by means of meta-class `DiagnosticSecurityEventReportingModeMapping`.] ([RS\\_DEXT\\_00081](#))

It is important to understand that this mapping is used to formalize the relation of two basic software modules to each other. No kind of application software is involved in this relation.

<b>Class</b>	<b>DiagnosticSecurityEventReportingModeMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::ServiceMapping			
<b>Note</b>	<p>This meta-class represents the ability to associate a location in a DID with a security event. The purpose of this mapping is that the location in the DID contains the setting of the reporting mode for the specific security event. This means that the reporting mode of the security event can be set via the diagnostic service WriteDataByIdentifier.</p> <p><b>Tags:</b> atp.Status=draft atp.recommendedPackage=DiagnosticMappings</p>

## 6 Diagnostic Event Handling

### 6.1 Introduction

This subchapter describes the meta-model elements that define the handling of and the functionality around diagnostic events.

In a standard AUTOSAR Basic Software architecture, the definitions based on the model elements described in this subchapter are realized by the Diagnostic Event Manager (Dem) module.

The following figure gives an overview on the model elements related to the diagnostic event functionality.

**Figure 6.1: Common model elements relevant for the Dem**

For the definition of the diagnostic event functionality, a number of model elements are derived from `DiagnosticCommonElement`. These elements are described in the following sub-chapters.

### 6.2 DiagnosticEvent

#### 6.2.1 Overview

[TPS\_DEXT\_01083] **Semantics of a `DiagnosticEvent`** [A `DiagnosticEvent` - the atomic unit handled by the Dem module - has to be defined together with its properties which affect the event handling behavior and possible interfaces to software-components.] ([RS\\_DEXT\\_00023](#))

Figure 6.2 depicts the definition of `DiagnosticEvent` together with its properties.

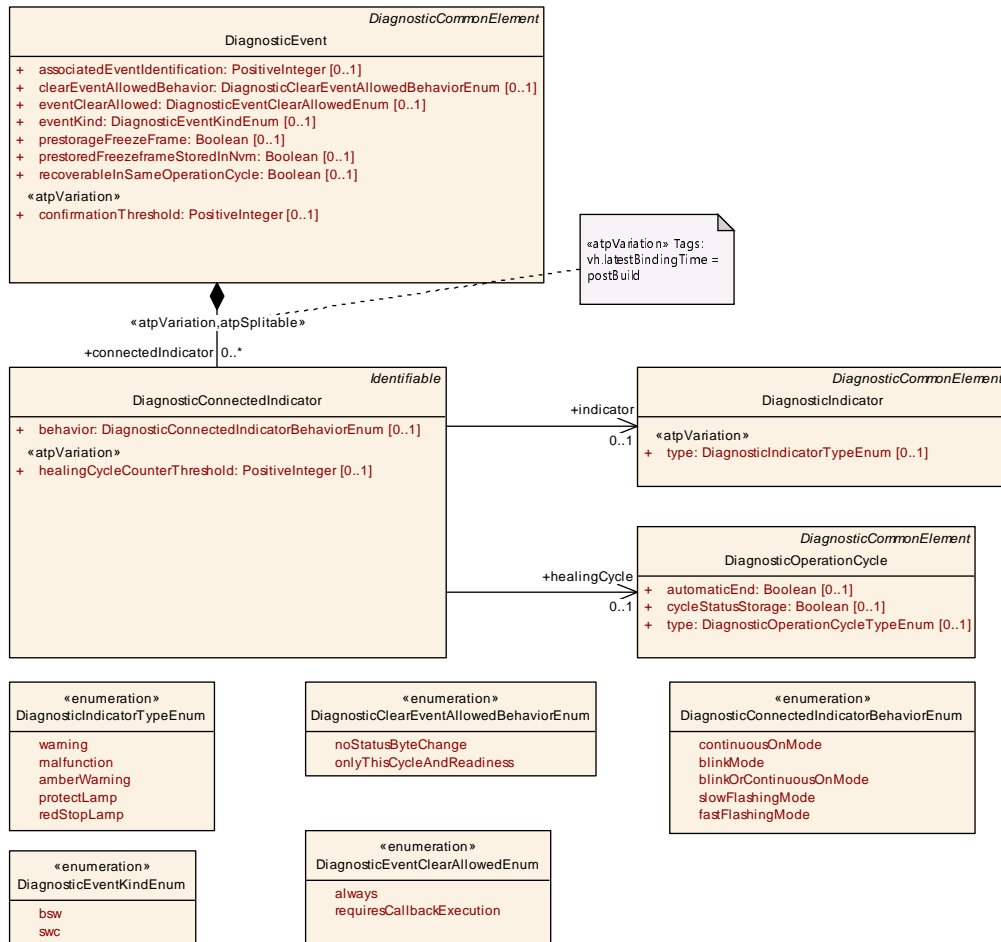

Figure 6.2: Modeling of DiagnosticEvent

The `DiagnosticExtract` allows the definition of an arbitrary number of `DiagnosticEvents`.

Although the exchange of a `DiagnosticExtract` between companies usually involves `DiagnosticEvents` related to SWC functionality, the event kind BSW is also supported in order to enable definition of handling of BSW events (e.g. definition of associated `DiagnosticTroubleCode`).

[TPS\_DEXT\_03011] **Clearing request for a DiagnosticEvent** [Furthermore, a clearing request for a `DiagnosticEvent` might require invocation of a callback to a SWC in order to allow or to prohibit the clearing operation.

The expectation on this callback interface can be expressed using the attribute `eventClearAllowed`:

- `always` indicates that a clearing request for the `DiagnosticEvent` shall **unconditionally be executed**.
- In case of `requiresCallbackExecution`, the **execution of a callback shall decide whether the clearing is permitted**.

In other words, the implementation of this decision is up to the developer of the corresponding `AtomicSwComponentType`.

The latter shall define a `SwcServiceDependency` with appropriate `DiagnosticEventNeeds` and a `RoleBasedPortAssignment` where the value of the attribute `role` is set to `CallbackClearEventAllowed`.

|(RS\_DEXT\_00023)

<b>Class</b>	<b>DiagnosticEvent</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticEvent			
<b>Note</b>	This element is used to configure DiagnosticEvents. <b>Tags:</b> atp.recommendedPackage=DiagnosticEvents			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
associated Event Identification	PositiveInteger	0..1	attr	This attribute represents the identification number that is associated with the enclosing DiagnosticEvent and allows to identify it when placed into a snapshot record or extended data record storage.  This value can be reported as internal data element in snapshot records or extended data records.
clearEvent Allowed Behavior	<a href="#">DiagnosticClearEventAllowedBehaviorEnum</a>	0..1	attr	This attribute defines the resulting UDS status byte for the related event, which shall not be cleared according to the <code>ClearEventAllowed</code> callback
confirmation Threshold	PositiveInteger	0..1	attr	This attribute defines the number of operation cycles with a failed result before a confirmed DTC is set to 1. The semantic of this attribute is a by "1" increased value compared to the confirmation threshold of the "trip counter" mentioned in ISO 14229-1 in figure D.4. A value of "1" defines the immediate confirmation of the DTC along with the first reported failed. This is also sometimes called "zero trip DTC". A value of "2" defines a DTC confirmation in the operation cycle after the first occurred failed. A value of "2" is typically used in the US for OBD DTC confirmation.  <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
connected Indicator	<a href="#">DiagnosticConnectedIndicator</a>	*	aggr	Event specific description of Indicators.  <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=connectedIndicator.shortName, connectedIndicator.variationPoint.shortLabel vh.latestBindingTime=postBuild
eventClear Allowed	<a href="#">DiagnosticEventClearAllowedEnum</a>	0..1	attr	This attribute defines whether the Dem has access to a "ClearEventAllowed" callback.
eventKind	<a href="#">DiagnosticEventKindEnum</a>	0..1	attr	This attribute is used to distinguish between SWC and BSW events.
prestorage FreezeFrame	Boolean	0..1	attr	This attribute describes whether the Prestorage of Freeze Frames is supported by the assigned event or not.  True: Prestorage of FreezeFrames is supported False: Prestorage of FreezeFrames is not supported

Class	DiagnosticEvent			
prestoredFreezeFrameStoredInNvm	Boolean	0..1	attr	If the Event uses a prestored freeze-frame (using the operations <code>PrestoreFreezeFrame</code> and <code>ClearPrestoredFreezeFrame</code> of the service interface <code>DiagnosticMonitor</code> ) this attribute indicates if the Event requires the data to be stored in non-volatile memory. TRUE = Dem shall store the prestored data in non-volatile memory, FALSE = Data can be lost at shutdown (not stored in Nvm)
recoverableInSameOperationCycle	Boolean	0..1	attr	If the attribute is set to true then reporting PASSED will reset the indication of a failed test in the current operation cycle. If the attribute is set to false then reporting PASSED will be ignored and not lead to a reset of the indication of a failed test.

**Table 6.1: DiagnosticEvent**

Enumeration	DiagnosticClearEventAllowedBehaviorEnum
Package	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticEvent
Note	This enumeration defines the possible behavior for clear event allowed
Literal	Description
noStatusByteChange	The event status byte keeps unchanged. <b>Tags:</b> atp.EnumerationLiteralIndex=0
onlyThisCycleAndReadiness	The OperationCycle and readiness bits of the event status byte are reset. <b>Tags:</b> atp.EnumerationLiteralIndex=1

**Table 6.2: DiagnosticClearEventAllowedBehaviorEnum**

Class	RoleBasedPortAssignment			
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior::ServiceMapping			
Note	This class specifies an assignment of a role to a particular service port (RPortPrototype or PPort Prototype) of an AtomicSwComponentType. With this assignment, the role of the service port can be mapped to a specific ServiceNeeds element, so that a tool is able to create the correct connector.			
Base	ARObject			
Attribute	Type	Mult.	Kind	Note
portPrototype	PortPrototype	0..1	ref	Service PortPrototype used in the assigned role. This PortPrototype shall either belong to the same AtomicSw ComponentType as the SwcInternalBehavior which owns the ServiceDependency or to the same NvBlockSw ComponentType as the NvBlockDescriptor.
role	Identifier	0..1	attr	This is the role of the assigned Port in the given context. The value shall be a shortName of the Blueprint of a Port Interface as standardized in the Software Specification of the related AUTOSAR Service.

**Table 6.3: RoleBasedPortAssignment**

[TPS\_DEXT\_01085] **DiagnosticEvent** can be connected to one or multiple indicators [A `DiagnosticEvent` can be connected to one or multiple indicators (modeled by means of aggregating `DiagnosticIndicator` in the role `connectedIndicator`) of a certain type and with certain behavior.] (*RS\_DEXT\_00023*)

<b>Class</b>	<b>DiagnosticConnectedIndicator</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticEvent			
<b>Note</b>	Description of indicators that are defined per DiagnosticEvent.			
<b>Base</b>	ARObject, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
behavior	<a href="#">DiagnosticConnectedIndicatorBehaviorEnum</a>	0..1	attr	Behavior of the linked indicator.
healingCycle	<a href="#">DiagnosticOperationCycle</a>	0..1	ref	The deactivation of indicators per event is defined as healing of a diagnostic event. The operation cycle in which the warning indicator will be switched off is defined here.
healingCycleCounterThreshold	PositiveInteger	0..1	attr	This attribute defines the number of healing cycles for the WarningIndicatorOffCriteria <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
indicator	<a href="#">DiagnosticIndicator</a>	0..1	ref	Reference to the used indicator.

**Table 6.4: DiagnosticConnectedIndicator**

## 6.2.2 Textual description

**[TPS\_DEXT\_01067] Textually formulated content attached to [DiagnosticEvent](#)**  
 [The definition of a [DiagnosticEvent](#) also consists of textually formulated content that is formalized in structure but cannot be formalized in content.

The purpose of this content is to define e.g. a mature condition that relates to the specific [DiagnosticEvent](#).] ([RS\\_DEXT\\_00023](#), [RS\\_DEXT\\_00045](#))

**[TPS\_DEXT\_01068] Textual description with respect to the [DiagnosticEvent](#)**  
 [Textual description that has the character of requirements with respect to the [DiagnosticEvent](#) shall be provided by means of the meta-class [StructuredReq](#), i.e. by means of [introduction.structuredReq](#).] ([RS\\_DEXT\\_00023](#), [RS\\_DEXT\\_00045](#))

<b>Class</b>	<b>StructuredReq</b>			
<b>Package</b>	M2::MSR::Documentation::BlockElements::RequirementsTracing			
<b>Note</b>	This represents a structured requirement. This is intended for a case where specific requirements for features are collected. Note that this can be rendered as a labeled list.			
<b>Base</b>	<i>ARObject</i> , <i>DocumentViewSelectable</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Paginateable</i> , <i>Referrable</i> , <i>Traceable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
appliesTo	standardNameEnum	*	attr	This attribute represents the platform the requirement is assigned to. <b>Tags:</b> xml.namePlural=APPLIES-TO-DEPENDENCIES xml.sequenceOffset=25
conflicts	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents an informal specification of conflicts. <b>Tags:</b> xml.sequenceOffset=40
date	DateTime	1	attr	This represents the date when the requirement was initiated. <b>Tags:</b> xml.sequenceOffset=5
dependencies	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents an informal specification of dependencies. Note that upstream tracing should be formalized in the property trace provided by the superclass <i>Traceable</i> . <b>Tags:</b> xml.sequenceOffset=30
description	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents the general description of the requirement. <b>Tags:</b> xml.sequenceOffset=10
importance	String	1	attr	This allows to represent the importance of the requirement. <b>Tags:</b> xml.sequenceOffset=8
issuedBy	String	1	attr	This represents the person, organization or authority which issued the requirement. <b>Tags:</b> xml.sequenceOffset=6
rationale	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents the rationale of the requirement. <b>Tags:</b> xml.sequenceOffset=20
remark	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents an informal remark. Note that this is not modeled as annotation, since these remark is still essential part of the requirement. <b>Tags:</b> xml.sequenceOffset=60
supportingMaterial	<a href="#">DocumentationBlock</a>	0..1	aggr	This represents an informal specification of the supporting material. <b>Tags:</b> xml.sequenceOffset=50
testedItem	Traceable	*	ref	This association represents the ability to trace on the same specification level. This supports for example the of acceptance tests. <b>Tags:</b> xml.sequenceOffset=70
type	String	1	attr	This attribute allows to denote the type of requirement to denote for example is it an "enhancement", "new feature" etc. <b>Tags:</b> xml.sequenceOffset=7

Class	StructuredReq			
useCase	<a href="#">DocumentationBlock</a>	0..1	aggr	This describes the relevant use cases. Note that formal references to use cases should be done in the trace relation.  <b>Tags:</b> xml.sequenceOffset=35

**Table 6.8: StructuredReq**

For more details regarding the modeling of the semi-formal text please refer to Figure 4.3.

**[TPS\_DEXT\_01069] Standardized values of [DiagnosticEvent.introduction.structuredReq](#)** [The following possible values of [DiagnosticEvent.introduction.structuredReq](#) are standardized by AUTOSAR:

- [DIAG\\_EVENT\\_MON\\_COND](#): this value describes the monitoring condition of the corresponding [DiagnosticEvent](#).
- [DIAG\\_EVENT\\_MON\\_TYPE](#): this value describes the monitoring type of the corresponding [DiagnosticEvent](#).
- [DIAG\\_EVENT\\_MON\\_RATE](#): this value describes the monitoring rate for the corresponding [DiagnosticEvent](#).
- [DIAG\\_EVENT\\_MAT\\_COND](#): this value describes a mature condition of the [DiagnosticEvent](#).
- [DIAG\\_EVENT\\_DEMAT\\_COND](#): this value describes a de-mature condition of the [DiagnosticEvent](#).
- [DIAG\\_EVENT\\_AGING](#): this value describes the behavior of the [DiagnosticEvent](#) regarding aging.
- [DIAG\\_EVENT\\_LIMP\\_IN\\_ACT](#): this value describes the associated limp-in action for the [DiagnosticEvent](#).
- [DIAG\\_EVENT\\_MAT\\_TIME](#): this value describes the mature time for the corresponding [DiagnosticEvent](#), i.e. how long or how often the fault must exist.
- [DIAG\\_EVENT\\_DEMAT\\_TIME](#): this value describes the de-mature time for the corresponding [DiagnosticEvent](#), i.e. how long or how often must the OK conditions be fulfilled.

]([RS\\_DEXT\\_00001](#), [RS\\_DEXT\\_00023](#), [RS\\_DEXT\\_00045](#))

The following ARXML fragment exemplifies the usage of [StructuredReq](#) along with the standardized values of the attribute [category](#) to attach semi-formal textual descriptions of an exemplary mature condition and a de-mature condition to a [DiagnosticEvent](#).

**Listing 6.1: Example for the definition of a semi-formal textual element in the context of a [DiagnosticEvent](#)**

### 6.2.3 Associated Event Identification

[TPS\_DEXT\_01151] Semantics of attribute [DiagnosticEvent.associatedEventIdentification](#) [Use cases exist where [DiagnosticEvents](#) are not associated with the [DiagnosticTroubleCode](#) but the occurrence of the event shall nonetheless be reported as part of the [dtcProps.snapshotRecordContent.dataIdentifier](#) of a given [DiagnosticTroubleCodeUds](#).

For this purpose, it is necessary that the tester can identify the occurrence of the [DiagnosticEvent](#) by means of the value of attribute [DiagnosticEvent.associatedEventIdentification](#).] ([RS\\_DEXT\\_00023](#))

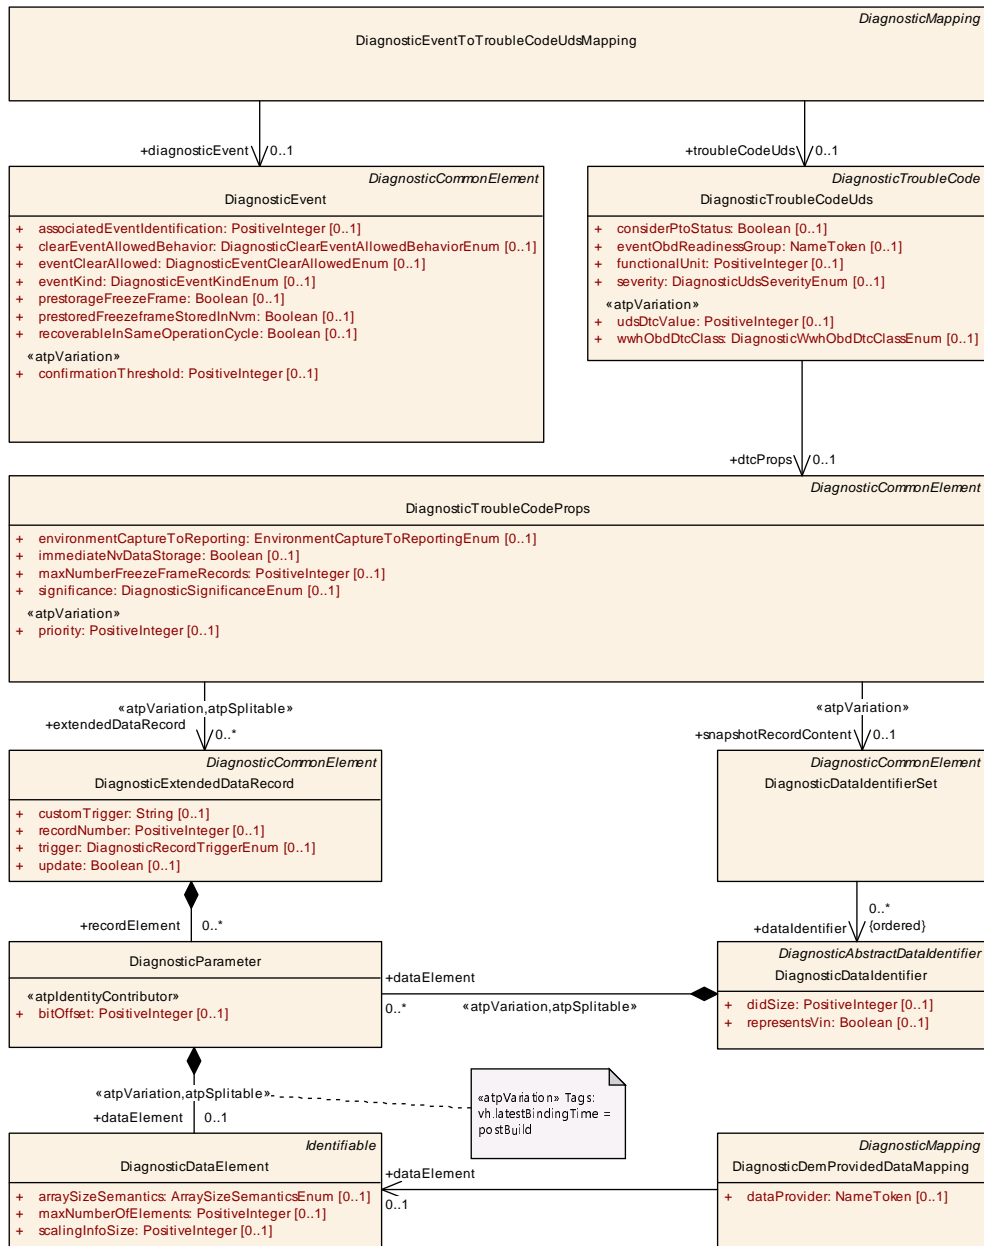

Figure 6.3: Modeling of associated event identification

[constr\_1768] Existence of attribute **DiagnosticEvent.associatedEventIdentification** [Attribute **DiagnosticEvent.associatedEventIdentification** shall exist if the respective **DiagnosticEvent** is mapped to a **DiagnosticTroubleCodeUds** and one of the following conditions is fulfilled:

- The reference **DiagnosticTroubleCodeUds.dtcProps.snapshotRecordContent** exists and the referenced **DiagnosticDataIdentifierSet** references at least one **dataIdentifier.dataElement.dataElement** that is also referenced by a **DiagnosticDemProvidedDataMapping** that has attribute **dataProvider** set to the value **DEM\_EVENT\_ASSOCIATED\_IDENTIFICATION**.

- The reference `DiagnosticTroubleCodeUds.dtcProps.extendedDataRecord` exists and the referenced `DiagnosticExtendedDataRecord` aggregates at least one `recordElement.dataElement` that is also referenced by a `DiagnosticDemProvidedDataMapping` that has attribute `dataProvider` set to the value `DEM_EVENT_ASSOCIATED_IDENTIFICATION`.

]()

The use case described in [TPS\_DEXT\_01151] and [constr\_1768] is depicted in Figure 6.3.

Please note that [constr\_1768] only describes the minimum viable scenario for the usage of attribute `DiagnosticEvent.associatedEventIdentification`. It is also possible that more than one `DiagnosticDataElement` exists that is referenced by a `DiagnosticDemProvidedDataMapping` where attribute `dataProvider` is set to the value `DEM_EVENT_ASSOCIATED_IDENTIFICATION`.

## 6.3 DiagnosticTroubleCode

`DiagnosticTroubleCodes` (i.e. the ECU external view on diagnostic events) are defined together with their properties and mapped to `DiagnosticEvents` using `DiagnosticEventToTroubleCodeUdsMapping`.

**[TPS\_DEXT\_03012] Three kinds of DTCs** [There are three kinds of DTCs represented as specializations of `DiagnosticTroubleCode`:

- non OBD relevant DTCs (`DiagnosticTroubleCodeUds`)
- OBD relevant DTCs (`DiagnosticTroubleCodeObd`)
- J1939 [22] relevant DTCs (`DiagnosticTroubleCodeJ1939`)

Properties individual to such a DTC specialization are modeled as attributes of `DiagnosticTroubleCodeUds`, `DiagnosticTroubleCodeObd` and `DiagnosticTroubleCodeJ1939`, respectively.] (*RS\_DEXT\_00024*)

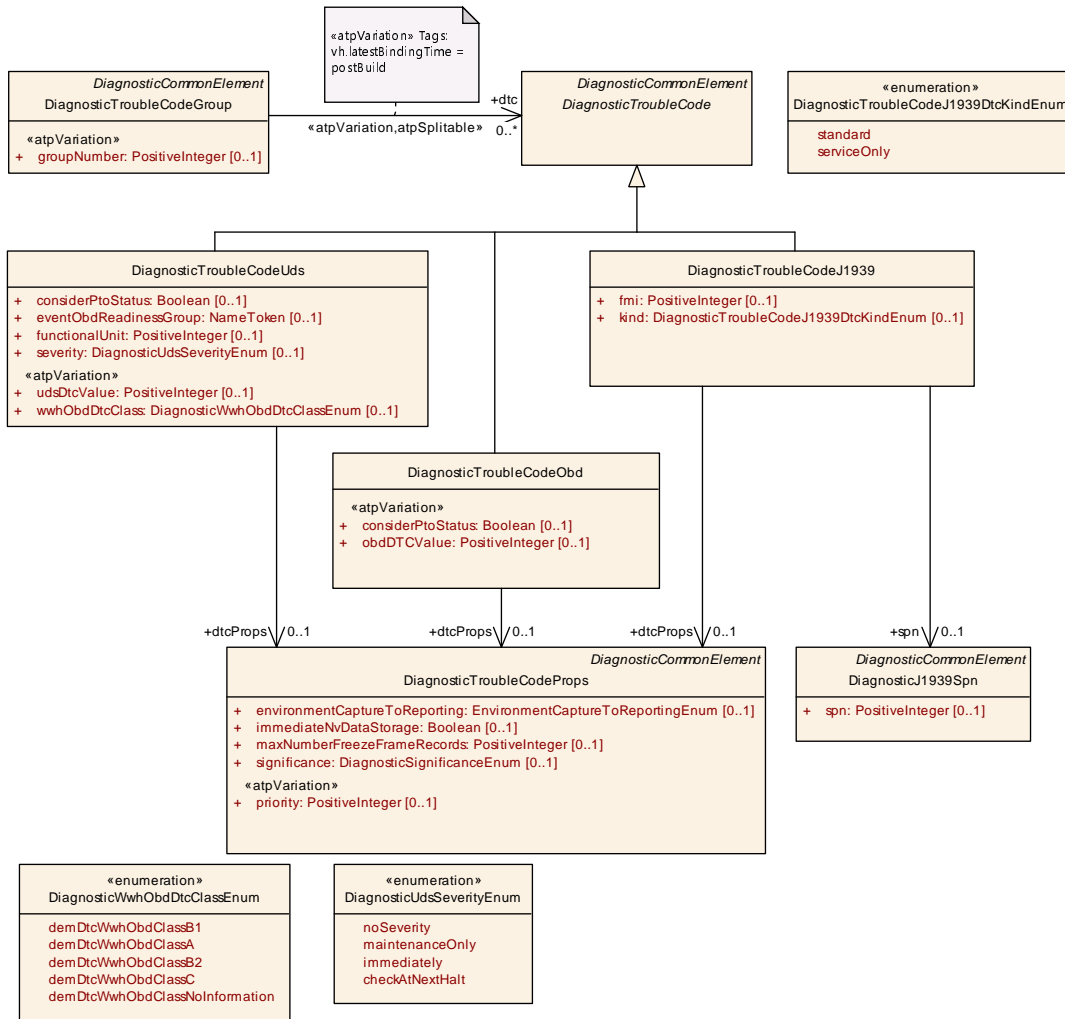

Figure 6.4: Modeling of DiagnosticTroubleCode

<b>Class</b>	<b>DiagnosticTroubleCodeUds</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode

**Table 6.12: DiagnosticTroubleCode**

**[TPS\_DEXT\_03014] Semantics of `DiagnosticTroubleCodeGroup`** [The `DiagnosticTroubleCodeGroup` element is used to define groups of DTCs that belong together. Each `DiagnosticTroubleCodeGroup` has its own `groupNumber` value assigned.](*RS\_DEXT\_00024*)

<b>Class</b>	<i>DiagnosticTroubleCodeGroup</i>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode			
<b>Note</b>	The diagnostic trouble code group defines the DTCs belonging together and thereby forming a group. <b>Tags:</b> atp.recommendedPackage=DiagnosticTroubleCodes			
<b>Base</b>	<i>ARElement</i> , <i>ARObject</i> , <i>CollectableElement</i> , <i>DiagnosticCommonElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>PackageableElement</i> , <i>Referrable</i>			
Attribute	Type	Mult.	Kind	Note

Class	DiagnosticTroubleCodeGroup			
dtc	<a href="#">DiagnosticTroubleCode</a>	*	ref	This represents the collection of DiagnosticTroubleCodes defined by this DiagnosticTroubleCodeGroup. <b>Stereotypes:</b> atpSplittable; atpVariation <b>Tags:</b> atp.Splitkey=dtc.diagnosticTroubleCode, dtc.variation Point.shortLabel vh.latestBindingTime=postBuild
groupNumber	PositiveInteger	0..1	attr	This represents the base number of the DTC group. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime

**Table 6.13: DiagnosticTroubleCodeGroup**

**[constr\_1830] Existence of [DiagnosticTroubleCodeGroup.groupNumber](#)** [For each [DiagnosticTroubleCodeGroup](#), attribute [groupNumber](#) shall exist at the time when the DEXT is complete.]()

**[constr\_1350] Value of [DiagnosticTroubleCodeGroup.groupNumber](#) shall be unique** [The value of [DiagnosticTroubleCodeGroup.groupNumber](#) shall be unique to any other DTC and DTC group value.]()

**[constr\_1351] Value of [DiagnosticTroubleCodeGroup.groupNumber](#)** [To be compliant to ISO, the value of [DiagnosticTroubleCodeGroup.groupNumber](#) shall be set as defined in ISO 14229-1 [16].]()

**[TPS\_DEXT\_03000] ISO 14229-1 reserves values of [DiagnosticTroubleCodeGroup.groupNumber](#)** [Any values other than those mentioned in [constr\_1351] are reserved by ISO 14229-1 [16].](*RS\_DEXT\_00024*)

**[constr\_1352] Existence of [maxNumberFreezeFrameRecords](#) vs. [freezeFrame](#)** [If the attribute [DiagnosticTroubleCodeProps.maxNumberFreezeFrameRecords](#) exists than the attribute [DiagnosticTroubleCodeProps.freezeFrame](#) shall not exist or vice versa.]()

**[constr\_1353] Applicability of [1352]** [[constr\_1352] shall apply in the identical way (either one or the other attribute shall exist) for all [DiagnosticTroubleCodeProps](#) within the context of all [DiagnosticContributionSets](#) of category DIAGNOSTIC\_ECU\_EXTRACT that refer to the same [EcuInstance](#).]()

**[constr\_1354] Existence of attribute [DiagnosticTroubleCodeProps.snapshotRecordContent](#)** [If one of the attributes [DiagnosticTroubleCodeProps.maxNumberFreezeFrameRecords](#) or [DiagnosticTroubleCodeProps.freezeFrame](#) exists then the attribute [DiagnosticTroubleCodeProps.snapshotRecordContent](#) shall exist.]()

**[TPS\_DEXT\_01064] Textually formulated content attached to [DiagnosticTroubleCode](#)** [The definition of a [DiagnosticTroubleCode](#) also consists of textually formulated content that is formalized in structure but cannot be formalized in content.]()

The purpose of this content is to define e.g. an error text or the possible cause that relates to the specific `DiagnosticTroubleCode`.] ([RS\\_DEXT\\_00024](#), [RS\\_DEXT\\_00045](#))

**[TPS\_DEXT\_01065] Different approaches to provide semi-formal textual content attached to a `DiagnosticTroubleCode`** [There are different approaches to provide semi-formal textual content attached to a `DiagnosticTroubleCode`:

- Textual description that has the character of descriptions of the `DiagnosticTroubleCode` shall be provided by means of the meta-class `TraceableText`, i.e. by means of `introduction.trace`.
- Textual description that characterizes the `DiagnosticTroubleCode` with respect to the *ODX long name* shall be provided by means of the attribute `longName`.

] ([RS\\_DEXT\\_00024](#), [RS\\_DEXT\\_00045](#))

<b>Class</b>	<b>TraceableText</b>			
<b>Package</b>	M2::MSR::Documentation::BlockElements::RequirementsTracing			
<b>Note</b>	This meta-class represents the ability to denote a traceable text item such as requirements etc. The following approach applies: <ul style="list-style-type: none"> <li>• <b>shortName</b> represents the tag for tracing</li> <li>• <b>longName</b> represents the head line</li> <li>• <b>category</b> represents the kind of the tagged text</li> </ul>			
<b>Base</b>	<i>ARObject</i> , <i>DocumentViewSelectable</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Paginateable</i> , <i>Referrable</i> , <i>Traceable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
text	<a href="#">DocumentationBlock</a>	1	aggr	This represents the text to which the tag applies. <b>Tags:</b> xml.roleElement=false xml.roleWrapperElement=false xml.sequenceOffset=30 xml.typeElement=false xml.typeWrapperElement=false

**Table 6.14: TraceableText**

<b>Class</b>	<b>MultilanguageReferrable</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::Identifiable			
<b>Note</b>	Instances of this class can be referred to by their identifier (while adhering to namespace borders). They also may have a longName. But they are not considered to contribute substantially to the overall structure of an AUTOSAR description. In particular it does not contain other Referrables.			
<b>Base</b>	<i>ARObject</i> , <i>Referrable</i>			
<b>Subclasses</b>	Caption, DefItem, DocumentationContext, <i>Identifiable</i> , SdgCaption, <i>TraceReferrable</i> , <i>Traceable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
longName	MultilanguageLong Name	0..1	aggr	This specifies the long name of the object. Long name is targeted to human readers and acts like a headline.

**Table 6.15: MultilanguageReferrable**

For more details regarding the modeling of the semi-formal text please refer to Figure 4.3.

The usage of `TraceableText` and `StructuredReq` alone would not qualify as a semi-formal textual attachment. It is necessary to standardize the value of the `category` in order to get some level of semi-formal textual description.

**[TPS\_DEXT\_01066] Standardized values of `DiagnosticTroubleCode.introduction.trace`** [The following possible values of `DiagnosticTroubleCode.introduction.trace` are standardized by AUTOSAR:

- **DIAG\_DTC\_ERROR\_TEXT**: this value shall be used to describe an error text.
- **DIAG\_DTC\_REP\_ACT**: this value describes the associated repair for the corresponding `DiagnosticTroubleCode`.
- **DIAG\_DTC\_CUS\_PER\_SYMP**: this value describes the possible customer perception symptom for the corresponding `DiagnosticTroubleCode`.
- **DIAG\_DTC\_POSS\_CAUSE**: This value describes the possible cause for the corresponding `DiagnosticTroubleCode`.

](*RS\_DEXT\_0001, RS\_DEXT\_0004, RS\_DEXT\_00045*)

The following ARXML fragment exemplifies the usage of `TraceableText` along with the standardized values of the attribute `category` to attach semi-formal textual descriptions to a `DiagnosticTroubleCodeUds`.

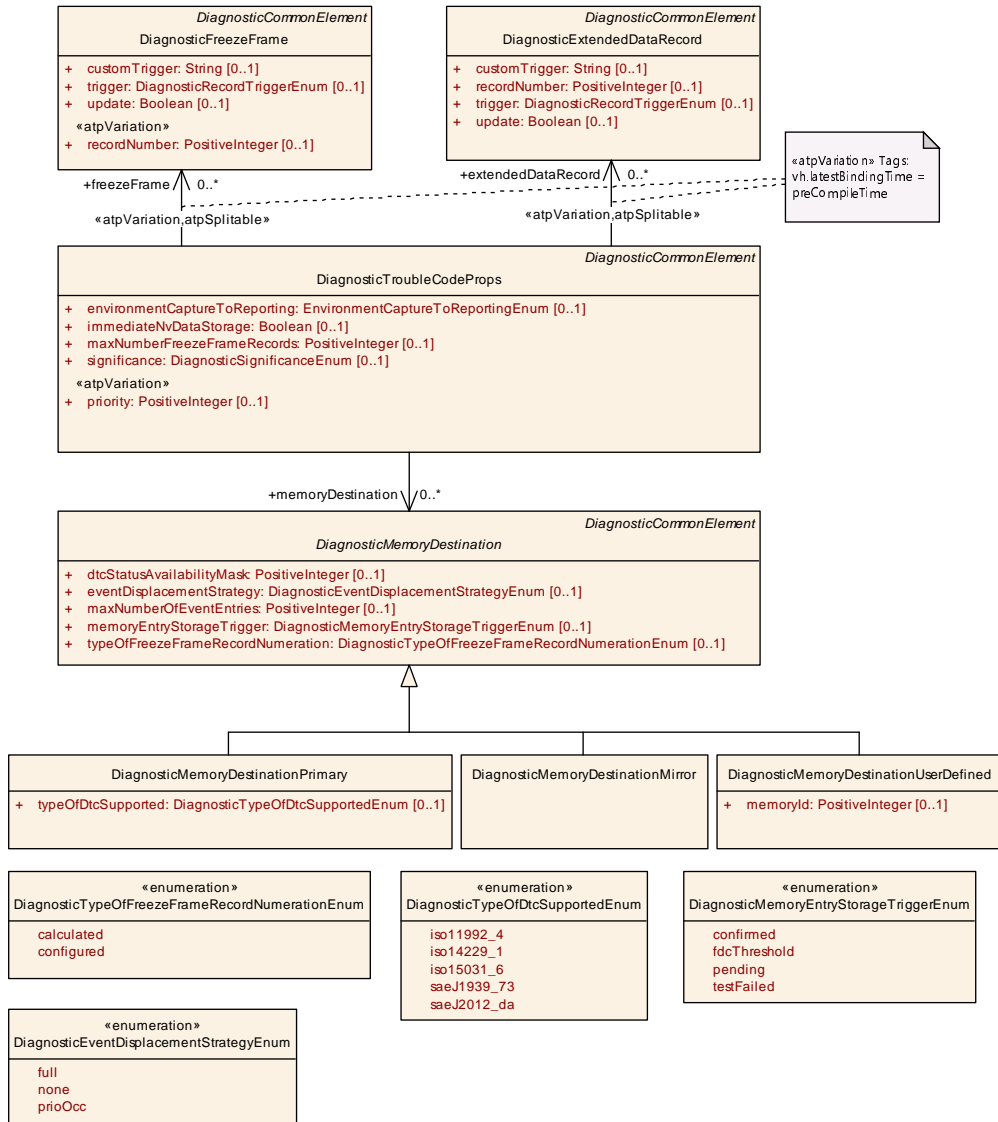

**Listing 6.2: Example for the definition of a semi-formal textual element in the context of a `DiagnosticTroubleCode`**

**[constr\_1376] Multiplicity of reference `DiagnosticTroubleCodeProps.memoryDestination`** [For every given `DiagnosticTroubleCodeProps`, the reference

in the role `DiagnosticTroubleCodeProps.memoryDestination` shall not exceed the upper multiplicity 2. [`constr_1377`] applies.]()

**[constr\_1377] Existence of reference `DiagnosticTroubleCodeProps.memoryDestination`** [The reference `DiagnosticTroubleCodeProps.memoryDestination` shall only have the upper multiplicity 2 if one (and only one) of the referenced `DiagnosticTroubleCodeProps.memoryDestination` is a `DiagnosticMemoryDestinationMirror`.]()

**Figure 6.6: Modeling of `DiagnosticMemoryDestination`**

<b>Class</b>	<b>DiagnosticMemoryDestination</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode			
<b>Note</b>	This abstract meta-class represents a possible memory destination for a diagnostic event.			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">DiagnosticMemoryDestinationMirror</a> , <a href="#">DiagnosticMemoryDestinationPrimary</a> , <a href="#">DiagnosticMemoryDestinationUserDefined</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dtcStatus AvailabilityMask	PositiveInteger	0..1	attr	Mask for the supported DTC status bits by the Dem.
event Displacement Strategy	<a href="#">DiagnosticEventDisplacementStrategyEnum</a>	0..1	attr	This attribute defines, whether support for event displacement is enabled or not, and which displacement strategy is followed.
maxNumberOf EventEntries	PositiveInteger	0..1	attr	This attribute fixes the maximum number of event entries in the fault memory.
memoryEntry StorageTrigger	<a href="#">DiagnosticMemoryEntryStorageTriggerEnum</a>	0..1	attr	Describes the trigger to allocate an event memory entry.
typeOfFreeze FrameRecord Numeration	<a href="#">DiagnosticTypeOfFreezeFrameRecordNumerationEnum</a>	0..1	attr	This attribute defines the type of assigning freeze frame record numbers for event-specific freeze frame records.

**Table 6.16: DiagnosticMemoryDestination**

<b>Class</b>	<b>DiagnosticMemoryDestinationPrimary</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode			
<b>Note</b>	This represents a primary memory for a diagnostic event. <b>Tags:</b> atp.recommendedPackage=DiagnosticMemoryDestinations			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMemoryDestination</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
typeOfDtc Supported	<a href="#">DiagnosticTypeOfDtcSupportedEnum</a>	0..1	attr	This attribute defines the format returned by Dem_Dcm GetTranslationType and does not relate to/influence the supported Dem functionality.

**Table 6.17: DiagnosticMemoryDestinationPrimary**

<b>Class</b>	<b>DiagnosticMemoryDestinationMirror</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode			
<b>Note</b>	This represents a mirror memory for a diagnostic event. <b>Tags:</b> atp.recommendedPackage=DiagnosticMemoryDestinations			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMemoryDestination</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table 6.18: DiagnosticMemoryDestinationMirror**

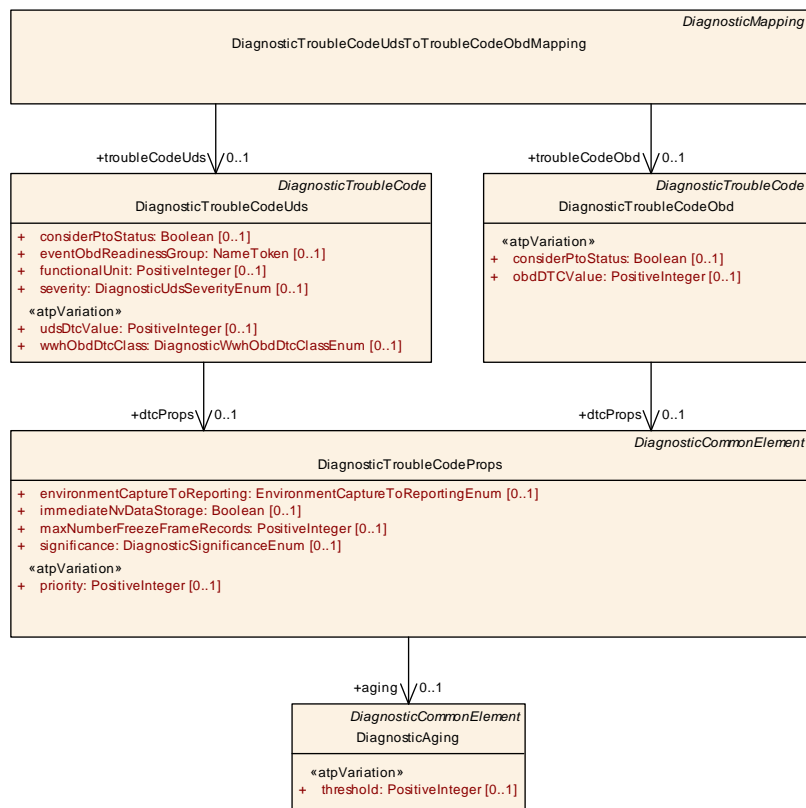

<b>Class</b>	<b>DiagnosticMemoryDestinationUserDefined</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode			
<b>Note</b>	This represents a user-defined memory for a diagnostic event. <b>Tags:</b> atp.recommendedPackage=DiagnosticMemoryDestinations			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMemoryDestination</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
memoryId	PositiveInteger	0..1	attr	This represents the identifier of the user-defined memory.

**Table 6.19: DiagnosticMemoryDestinationUserDefined**

**[constr\_1378] Value of [DiagnosticMemoryDestinationUserDefined.memoryId](#)** [Within the scope of one [DiagnosticContributionSet](#), no two (or more) [DiagnosticMemoryDestinationUserDefineds](#) shall exist that share the same value for attribute [DiagnosticMemoryDestinationUserDefined.memoryId](#)]()

In other words, the value of the attribute [DiagnosticMemoryDestinationUserDefined.memoryId](#) shall be unique within any given [DiagnosticExtract](#).

On top of that, it is necessary to make sure that only **one primary memory** and only **one mirror memory** is defined.

**Figure 6.7: Mapping of UDS DTC to OBD DTC**

**[constr\_1379] Existence of [DiagnosticMemoryDestinationPrimary](#)** [Within the scope of one [DiagnosticContributionSet](#) only one [DiagnosticMemoryDestinationPrimary](#) shall exist.]()

**[constr\_1380] Existence of [DiagnosticMemoryDestinationMirror](#)** [Within the scope of one [DiagnosticContributionSet](#) only one [DiagnosticMemoryDestinationMirror](#) shall exist.]()

**[constr\_1725] Applicability of attribute [DiagnosticMemoryDestination.dtcStatusAvailabilityMask](#)** [Attribute [DiagnosticMemoryDestination.dtcStatusAvailabilityMask](#) shall not be defined in the context of a [DiagnosticMemoryDestinationMirror](#).]()

**[constr\_1711] Restriction of applicability of attribute [typeOfFreezeFrameRecordNumeration](#)** [The attribute [typeOfFreezeFrameRecordNumeration](#) shall not be used in the context of a [DiagnosticMemoryDestinationMirror](#).]()

**[TPS\_DEXT\_01094] Semantics of meta-class [DiagnosticTroubleCodeUdsToTroubleCodeObdMapping](#)** [The meta-class [DiagnosticTroubleCodeUdsToTroubleCodeObdMapping](#) can be used to associate a [DiagnosticTroubleCodeUds](#) with a [DiagnosticTroubleCodeObd](#).]()

<b>Class</b>	<b>DiagnosticTroubleCodeProps</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticTroubleCode			
<b>Note</b>	This element defines common Dtc properties that can be reused by different non OBD-relevant DTCs. <b>Tags:</b> atp.recommendedPackage=DiagnosticTroubleCodePropss			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
aging	<a href="#">DiagnosticAging</a>	0..1	ref	Reference to an aging algorithm in case that an aging/unlearning of the event is allowed.
environmentCaptureToReporting	EnvironmentCaptureToReportingEnum	0..1	attr	This attribute determines the point in time, when the data actually is captured.
extendedDataRecord	<a href="#">DiagnosticExtendedDataRecord</a>	*	ref	Defines the links to an extended data class sampler. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=extendedDataRecord.diagnosticExtendedDataRecord, extendedDataRecord.variationPoint.shortLabel vh.latestBindingTime=preCompileTime
freezeFrame	<a href="#">DiagnosticFreezeFrame</a>	*	ref	Define the links to a freeze frame class sampler. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=freezeFrame.diagnosticFreezeFrame, freezeFrame.variationPoint.shortLabel vh.latestBindingTime=preCompileTime

Class	DiagnosticTroubleCodeProps			
immediateNv DataStorage	Boolean	0..1	attr	Switch to enable immediate storage triggering of an according event memory entry persistently to NVRAM. true: immediate non-volatile storage triggering enabled false: immediate non-volatile storage triggering disabled
legislated FreezeFrame ContentWwh Obd	<a href="#">DiagnosticDataIdentifier Set</a>	0..1	ref	This reference identifies the layout of the WWH-OBd freeze frame. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
maxNumber FreezeFrame Records	PositiveInteger	0..1	attr	This attribute defines the number of according freeze frame records, which can maximal be stored for this event. Therefore all these freeze frame records have the same freeze frame class.
memory Destination	<a href="#">DiagnosticMemory Destination</a>	*	ref	The event destination assigns events to none, one or multiple origins.
priority	PositiveInteger	0..1	attr	Priority of the event, in view of full event buffer. A lower value means higher priority. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
significance	<a href="#">DiagnosticSignificance Enum</a>	0..1	attr	Significance of the event, which indicates additional information concerning fault classification and resolution.
snapshot RecordContent	<a href="#">DiagnosticDataIdentifier Set</a>	0..1	ref	This represents the freeze frame layout as a set of DIDs. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime

**Table 6.20: DiagnosticTroubleCodeProps**

**[constr\_1831] Existence of [DiagnosticTroubleCodeProps.priority](#)** [For each [DiagnosticTroubleCodeProps](#), attribute [priority](#) shall exist **at the time when the DEXT is complete.**]()

**[constr\_1859] Usage of `DiagnosticRecordTriggerEnum.testFailedThisOperationCycle`** [The enumeration value `DiagnosticRecordTriggerEnum.testFailedThisOperationCycle` shall only be used in the context of meta-class `DiagnosticFreezeFrame`.]()

## 6.5 DiagnosticFreezeFrame

**[TPS\_DEXT\_03009] Semantics of `DiagnosticFreezeFrame`** [A `DiagnosticFreezeFrame` needs an ordered list of references to `DiagnosticDataIdentifiers`. However, this reference is not modeled directly but in the context of meta-class `DiagnosticTroubleCodeProps`.](*RS\_DEXT\_00033*)

For more details, please refer to Figure 6.4.

**[constr\_1357] Value of `freezeFrame.recordNumber`** [To be compliant to ISO, the value of `freezeFrame.recordNumber` shall be set in the interval as defined in ISO 14229-1 [16].]()

**[constr\_1512] `freezeFrame.recordNumber` shall be unique within primary fault memory** [For all `DiagnosticTroubleCodeProps` that refer to `DiagnosticMemoryDestinationPrimary` in the role `memoryDestination` there shall be no two `freezeFrame.recordNumber` with the same value.]()

**[constr\_1513] `freezeFrame.recordNumber` shall be unique within mirror fault memory** [For all `DiagnosticTroubleCodeProps` that refer to `DiagnosticMemoryDestinationMirror` in the role `memoryDestination` there shall be no two `freezeFrame.recordNumber` with the same value.]()

**[constr\_1514] `freezeFrame.recordNumber` shall be unique within user-defined fault memory** [For all `DiagnosticTroubleCodeProps` that refer to `DiagnosticMemoryDestinationUserDefined` in the role `memoryDestination` there shall be no two `freezeFrame.recordNumber` with the same value for any `DiagnosticMemoryDestinationUserDefined` referenced as `DiagnosticTroubleCodeProps.memoryDestination` with a given value of `memoryId`.]()

**[TPS\_DEXT\_01144] Definition of a custom trigger for a freeze frame** [It is possible to define a custom trigger for the capturing of a freeze frame. The custom nature, however, severely limits the possibilities for a formal description of such a trigger. Therefore, AUTOSAR can only provide a means to verbally describe how the custom trigger shall operate.

For this purpose the attribute `DiagnosticFreezeFrame.customTrigger` has been defined. (RS\_DEXT\_00033)

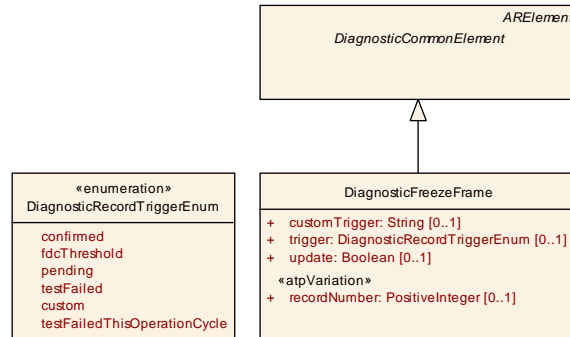

Figure 6.9: Modeling of DiagnosticFreezeFrame

[constr\_1617] Existence of attribute `DiagnosticFreezeFrame.customTrigger` [The attribute `DiagnosticFreezeFrame.customTrigger` shall only exist if the attribute `DiagnosticFreezeFrame.trigger` is set to the value `DiagnosticRecordTriggerEnum.custom`.]()

<b>Class</b>	<b>DiagnosticFreezeFrame</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticFreezeFrame			
<b>Note</b>	This element describes combinations of DIDs for a non OBD relevant freeze frame. <b>Tags:</b> atp.recommendedPackage=DiagnosticFreezeFrames			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
customTrigger	String	0..1	attr	This attribute shall be taken to verbally describe the nature of the custom trigger.
recordNumber	PositiveInteger	0..1	attr	This attribute defines a record number for a freeze frame record. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
trigger	<a href="#">DiagnosticRecordTriggerEnum</a>	0..1	attr	This attribute defines the primary trigger to allocate an event memory entry.
update	Boolean	0..1	attr	This attribute defines the approach when the freeze frame record is stored/updated. True: FreezeFrame record is captured every time. False: FreezeFrame record is only captured for new event memory entries.

Table 6.29: DiagnosticFreezeFrame

[constr\_1833] Existence of `DiagnosticFreezeFrame.trigger` [For each `DiagnosticFreezeFrame`, attribute `trigger` shall exist at the time when the DEXT is complete.]()

## 6.6 DiagnosticCondition

[TPS\_DEXT\_03010] **Combination of DiagnosticConditions to DiagnosticConditionGroups** [DiagnosticConditions are combined to DiagnosticConditionGroups and define a certain number of checks (e.g. correct voltage range) before the event report is accepted or the event gets qualified.](RS\_DEXT\_00027, RS\_DEXT\_00028, RS\_DEXT\_00030, RS\_DEXT\_00031)

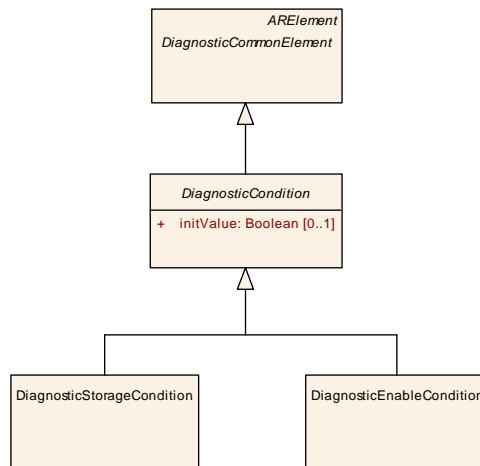

Figure 6.10: Modeling of DiagnosticCondition

[TPS\_DEXT\_03001] **Different types of conditions** [There are two different types of conditions: DiagnosticEnableConditions and DiagnosticStorageCondition:

- As long as the DiagnosticEnableCondition is not fulfilled, the event reports are not valid and therefore will not be accepted.
- As long as the DiagnosticStorageCondition is not fulfilled, the event is not stored in the event memory.

## 6.9 DiagnosticMapping

The mapping concept of the `DiagnosticExtract` template has been designed to support the decentralized and independent definition of diagnostic requirements that can be linked together at a late point during the development process.

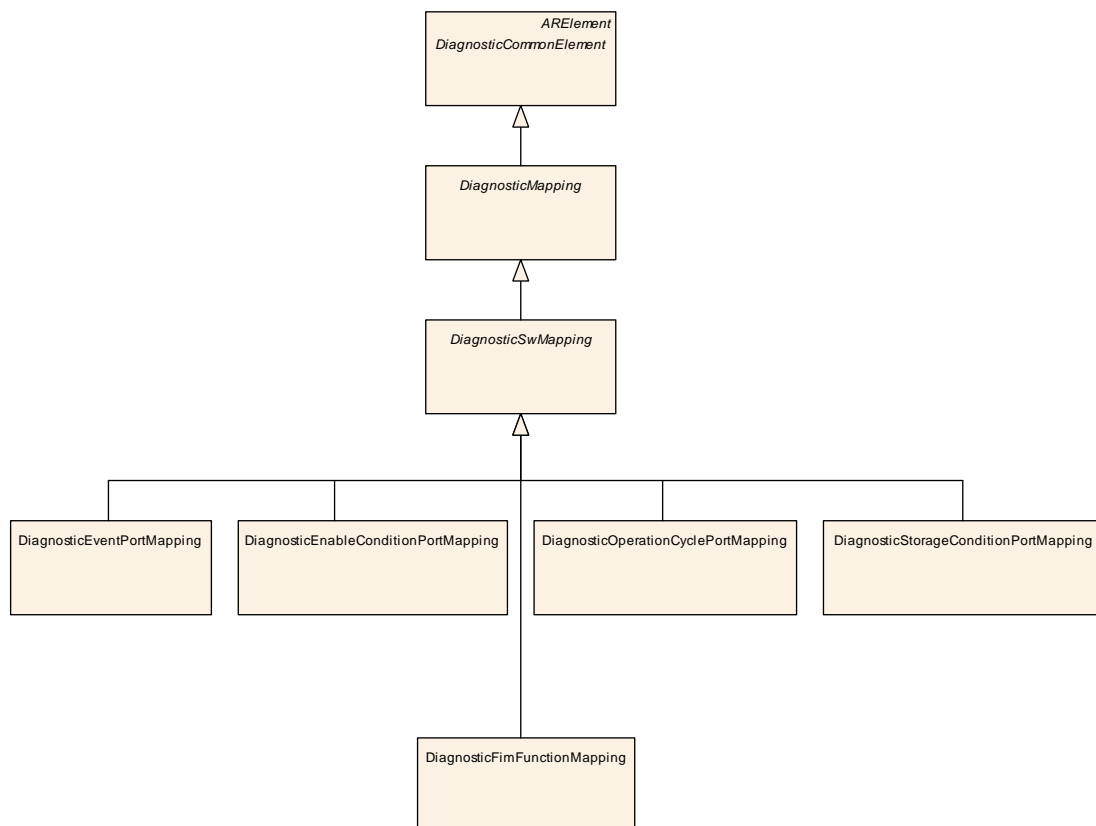

It also supports the use of mapping contributions collected from various sources in order to reduce manual mapping work by the ECU integrator.

**[TPS\_DEXT\_03002] Two kind of mappings** [For diagnostic event handling, there are two kinds of mappings:

- Mapping between a `DiagnosticEvent` and another diagnostic definition.
- Mapping between a `DiagnosticEvent` and a SWC service port.

]([RS\\_DEXT\\_00023](#), [RS\\_DEXT\\_00052](#))

Figure 6.13 gives an overview on the different types of mappings available for diagnostic event handling.

**Figure 6.13: Modeling of DiagnosticMapping**

debounce Algorithm	<a href="#">DiagEventDebounceAlgorithm</a>	0..1	aggr	This represents the actual debounce algorithm.
debounce Behavior	<a href="#">DiagnosticDebounceBehaviorEnum</a>	0..1	attr	This attribute defines how the event debounce algorithm will behave, if a related enable condition is not fulfilled or ControlDTCSetting of the related event is disabled. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
debounce CounterStorage	Boolean	0..1	attr	Switch to store the debounce counter value non-volatile or not. true: debounce counter value shall be stored non-volatile false: debounce counter value is volatile

**Table 6.45: DiagnosticDebounceAlgorithmProps**

The details regarding the formalization of debouncing behavior are depicted in Figure 6.11.

In particular, [DiagnosticCommonProps](#) aggregates [DiagnosticDebounceAlgorithmProps](#) in the role [debounceAlgorithmProps](#). The [DiagnosticDebounceAlgorithmProps](#) itself does not actually represent the debouncing algorithm but provides attributes relevant for the actual debouncing algorithm.

#### 6.9.4 DiagnosticEvent to EnableConditionGroup Mapping

[TPS\_DEXT\_03015] **EnableConditions** have to be put into a **DiagnosticEnableConditionGroup** [EnableConditions that are assigned to a [DiagnosticEvent](#) have to be put into a [DiagnosticEnableConditionGroup](#) since only a group of EnableConditions can be mapped to a [DiagnosticEvent](#).] ([RS\\_DEXT\\_00023](#), [RS\\_DEXT\\_00026](#), [RS\\_DEXT\\_00028](#))

[constr\_1361] Number of [DiagnosticEventToEnableConditionGroupMapping](#) elements per [DiagnosticEvent](#) [The mapping element [DiagnosticEventToEnableConditionGroupMapping](#) shall be created no more than once per [DiagnosticEvent](#).

If several [DiagnosticEventToEnableConditionGroupMapping](#) elements referring to the same [DiagnosticEvent](#) are defined, then the Enable Condition Group mapping shall be regarded as defective.]()

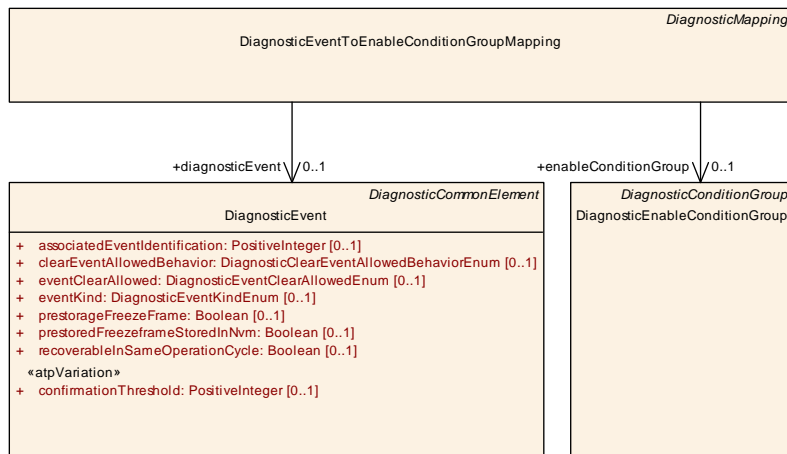

Figure 6.17: DiagnosticEventToEnableConditionGroupMapping

<b>Class</b>	<b>DiagnosticEventToEnableConditionGroupMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticMapping

swcServiceDependencyInSystem	<a href="#">SwcServiceDependency</a>	0..1	iref	Instance reference to a SwcServiceDependency that links ServiceNeeds to SWC service ports. <b>InstanceRef implemented by:</b> <a href="#">SwcServiceDependencyInSystemInstanceRef</a>

**Table 6.51: DiagnosticStorageConditionPortMapping**

**[constr\_1846] Existence of reference [DiagnosticStorageConditionPortMapping.diagnosticStorageCondition](#)** [For each [DiagnosticStorageConditionPortMapping](#), the reference to [DiagnosticStorageCondition](#) in the role [diagnosticStorageCondition](#) shall exist at the time when the DEXT is complete.]()

### 6.9.10 Provided Data Mapping

**[TPS\_DEXT\_03020] Semantics of [DiagnosticDemProvidedDataMapping](#)** [The meta-class [DiagnosticDemProvidedDataMapping](#) does not seem to fulfill the condition for representing a mapping class because it only has one reference to a [DiagnosticDataElement](#) in the role [dataElement](#).

However, the specific nature of this mapping is that the second element (the [DiagnosticDemProvidedDataMapping.dataProvider](#)) that is supposed to take place in the mapping cannot precisely be modeled as a single meta-class.

Therefore, there is no better way than to model the [DiagnosticDemProvidedDataMapping.dataProvider](#) by a [NameToken](#).

The semantics of this mapping is to further qualify the access to the [DiagnosticDataElement](#) referenced in the role [dataElement](#) from within the Dem.]([RS\\_DEXT\\_00043](#), [RS\\_DEXT\\_00052](#))

**[TPS\_DEXT\_01142] Standardized values for [DiagnosticDemProvidedDataMapping.dataProvider](#)** [For attribute [DiagnosticDemProvidedDataMapping.dataProvider](#), the following values are reserved by the AUTOSAR standard:

- DEM\_AGINGCTR\_DOWNCNT: map down-counting Dem-internal aging counter.

- DEM\_AGINGCTR\_UPCNT: map up-counting Dem-internal aging counter.
- DEM\_AGINGCTR\_UPCNT\_FIRST\_ACTIVE: Map up-counting Dem-internal aging counter, starting at 1 when aging starts.
- DEM\_CLR\_DIST: Distance since diagnostic trouble codes cleared.
- DEM\_CLR\_TIME: Time since diagnostic trouble codes cleared
- DEM\_CURRENT\_FDC: map Dem-internal fault detection counter.
- DEM\_CYCLES\_SINCE\_FIRST\_FAILED: map Dem-internal Operation Cycle Counter - cycles since first failed.
- DEM\_CYCLES\_SINCE\_LAST\_FAILED: map Dem-internal Operation Cycle Counter - cycles since last failed.
- DEM\_DTC\_PRIORITY: DTC priority statically assigned to this DTC.
- DEM\_FAILED\_CYCLES: map Dem-internal Operation Cycle Counter - failed cycles.
- DEM\_MAX\_FDC\_DURING\_CURRENT\_CYCLE: map Dem-internal DTC Fault Detection Counter maximum value during current operation cycle.
- DEM\_MAX\_FDC\_SINCE\_LAST\_CLEAR: map Dem-internal DTC Fault Detection Counter maximum value since last clear.
- DEM\_MIL\_DIST: Distance traveled While MIL is activated.
- DEM\_MIL\_TIME: Time run by the engine while MIL is activated.
- DEM\_OCCCTR: map Dem-internal occurrence counter.
- DEM\_OVFLIND: map Dem-internal overflow indication.
- DEM\_SIGNIFICANCE: map (static) Dem-internal event significance.
- DEM\_WARM\_UPS: Number of warm-ups since diagnostic trouble codes cleared.
- DEM\_J1939LAMP\_STATUS: Current state of applicable lamp(s) for this DTC in SAE J1939 DM31 format.
- DEM\_EVENT\_ASSOCIATED\_IDENTIFICATION: static event identification value associated to an event, see [TPS\_DEXT\_01151].

]([RS\\_DEXT\\_00043](#), [RS\\_DEXT\\_00052](#))

Please note that, where applicable, AUTOSAR allows for the usage of values of the attribute `DiagnosticDemProvidedDataMapping.dataProvider` other than the values standardized by [TPS\_DEXT\_01142].

In this case, however, proprietary values of the attribute `DiagnosticDemProvidedDataMapping.dataProvider` shall be prefixed with a company-specific name fragment in order to avoid collisions that could occur if or when the list of possible values claimed by the AUTOSAR standard itself is extended.

[constr\_1782] Usage of internal data elements only for extended data records  
[A `DiagnosticDemProvidedDataMapping` shall **only** refer to a `DiagnosticDataElement` that is aggregated by a `DiagnosticExtendedDataRecord` in the role `recordElement.dataElement`.]()

Please note the existence of [constr\_1756].

### 6.9.11 Master to Slave Event Mapping

AUTOSAR provides the ability to associate multiple diagnostic events in the way that the reporting of one event (also known as the master event) from a diagnostic monitor automatically triggers the reporting of one or more other diagnostic events (also known as slave events) with the same test result.

Please note that the existence of the `DiagnosticMasterToSlaveEventMapping` is primarily motivated by the need to store the result of event reporting simultaneously in different fault memories within the affected ECU.

As a consequence, a model that references a given `DiagnosticEvent` as both `masterEvent` and `slaveEvent` shall be considered broken, as further clarified in [constr\_1590].

In the same spirit, a model where one specific `DiagnosticEvent` is referenced more than once in the role `masterEvent` or the role `slaveEvent` is also considered broken.

**[constr\_1590] `DiagnosticEvent` referenced in the role `masterEvent` or `slaveEvent`** [Any given `DiagnosticEvent` shall at most once be referenced from a `DiagnosticMasterToSlaveEventMapping`.]()

A diagnostic slave event shall never be reported directly by a diagnostic monitor. Slave events are exclusively reported internally in the Dem. This important aspect is covered by [constr\_1591].

**[constr\_1591] `DiagnosticEvent` referenced as `slaveEvent` shall not be reported by diagnostic monitor** [A `DiagnosticEvent` referenced in the role `DiagnosticMasterToSlaveEventMapping.slaveEvent` shall not be referenced in the role `DiagnosticEventPortMapping.diagnosticEvent` and vice versa.]()

**Table 6.53: DiagnosticMasterToSlaveEventMapping**

### 6.9.12 Diagnostic Event to Security Event Mapping

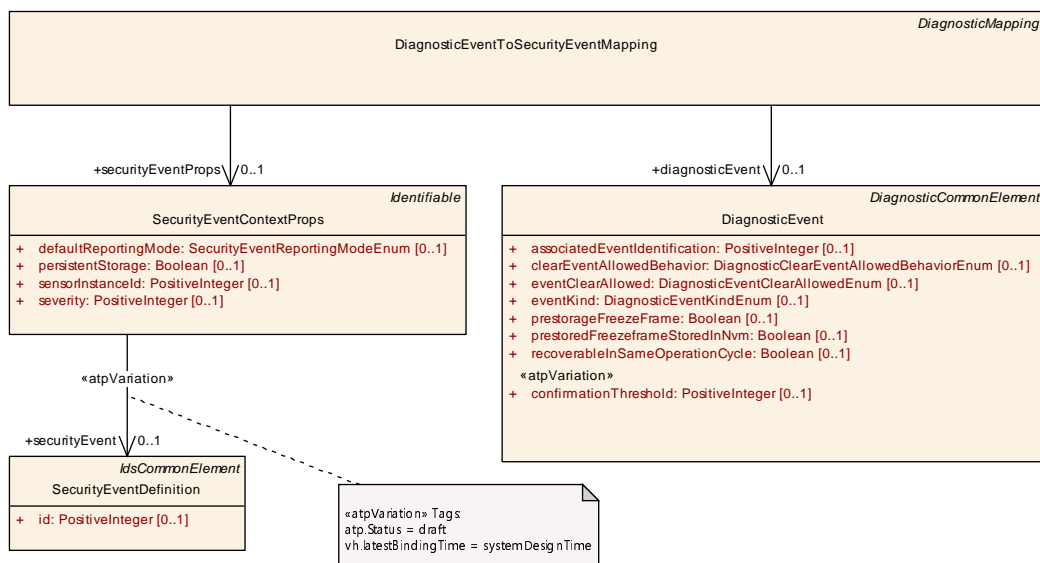

AUTOSAR provides the ability to define so-called security events (formalized by meta-class [SecurityEventDefinition](#)) to indicate a possible intrusion into an AUTOSAR system.

The details are described in the specification of the TPS Security Extract Template [20].

[TPS\_DEXT\_01153]{DRAFT} **Semantics of meta-class [DiagnosticEventToSecurityEventMapping](#)** [The occurrence of some security events need to be persisted in the context of the Dem.

Technically, this mechanism boils down to a reporting of a diagnostic event in response to the occurrence of a security event.

This approach is made possible by the existence of the [DiagnosticEventToSecurityEventMapping](#).] ([RS\\_DEXT\\_00080](#))

**Figure 6.25: Modeling of the [DiagnosticEventToSecurityEventMapping](#)**

<b>Class</b>	<b>DiagnosticEventToSecurityEventMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::DiagnosticMapping			
<b>Note</b>	<p>This meta-class represents the ability to map a security event that is defined in the context of the Security Extract to a diagnostic event defined on the context of the DiagnosticExtract.</p> <p><b>Tags:</b> atp.Status=draft atp.recommendedPackage=DiagnosticMappings</p>			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnosticEvent	<a href="#">DiagnosticEvent</a>	0..1	ref	<p>This reference identifies the applicable diagnostic event.</p> <p><b>Tags:</b>atp.Status=draft</p>
securityEvent Props	<a href="#">SecurityEventContext Props</a>	0..1	ref	<p>This reference identifies the qualification of the applicable security event</p> <p><b>Tags:</b>atp.Status=draft</p>

**Table 6.54: DiagnosticEventToSecurityEventMapping**

**[constr\_10026]{DRAFT} Existence of reference in the role [DiagnosticEventToSecurityEventMapping.diagnosticEvent](#)** [For each [DiagnosticEventToSecurityEventMapping](#), the reference to [DiagnosticEvent](#) in the role [diagnosticEvent](#) shall exist **at the time when the DEXT is complete.**]()

**[constr\_10027]{DRAFT} Existence of reference in the role [DiagnosticEventToSecurityEventMapping.securityEventProps](#)** [For each [DiagnosticEventToSecurityEventMapping](#), the reference to [SecurityEventContextProps](#) in the role [securityEventProps](#) shall exist **at the time when the DEXT is complete.**]()

It is important to understand that the mapping to a security event is **not** directed at [SecurityEventDefinition](#). This meta-class represents a high-level design object that needs some more context in order to be considered in a specific project.

This additional context is provided by [SecurityEventContextProps](#), which consequently becomes the target of the reference in the role [DiagnosticEventToSecurityEventMapping.securityEventProps](#).

At first glance, it may seem that the definition of the [DiagnosticEventToSecurityEventMapping](#) and the existence of attribute [SecurityEventContextProps.persistentStorage](#) create a certain level of redundancy. However, this is not really the case.

This means in particular that the existence of [SecurityEventContextProps.persistentStorage](#) can be used to indicate the need to persist the respective security event.

The corresponding [DiagnosticEventToSecurityEventMapping](#) may be created later in the workflow where the formal information which security event shall be persisted represents an important input to the workflow.

<b>Class</b>	<b>SecurityEventContextProps</b>			
<b>Package</b>	M2::AUTOSARTemplates::SecurityExtractTemplate			
<b>Note</b>	This meta-class specifies the SecurityEventDefinition to be mapped to an IdsmInstance and adds mapping-dependent properties of this security event valid only for this specific mapping. <b>Tags:</b> atp.Status=draft			
<b>Base</b>	ARObject, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>

### 6.14 OBD-related aspects of Dem Configuration

The support for OBD-related [18] modeling requires the addition of some pretty global (i.e. on the level of an entire ECU) attribute that could be added to the `EcuInstance`. However, this would not align with the idea of a decentralized configuration of the diagnostic stack where information is added at a point in time when an actual `EcuInstance` is not yet available.

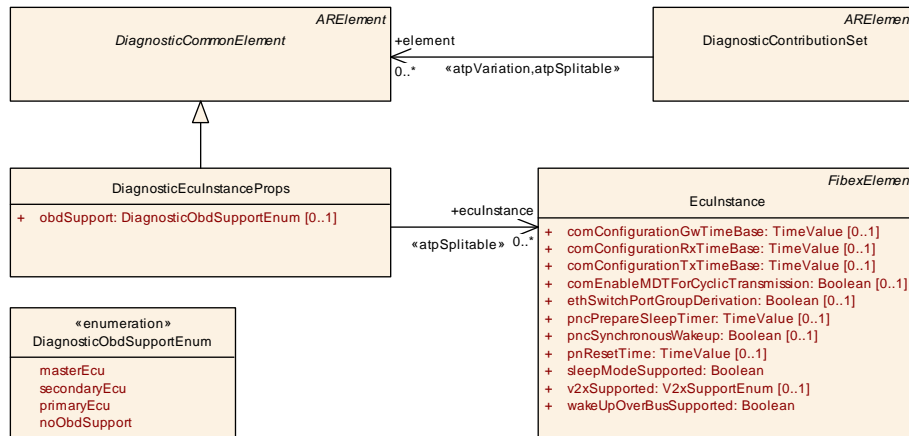

Figure 6.30: Modeling of `DiagnosticEcuInstanceProps`

Therefore, the attributes applying for the ECU-level are added to the meta-class `DiagnosticEcuInstanceProps`.

**[TPS\_DEXT\_01122] Indication whether a `EcuInstance` supports OBD** [The attribute `DiagnosticEcuInstanceProps.obdSupport` is taken to define whether a given `EcuInstance` shall support OBD and in which way OBD shall be supported on this Ecu.] ([RS\\_DEXT\\_00058](#))

<b>Class</b>	<b>DiagnosticEcuInstanceProps</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::DiagnosticContribution			
<b>Note</b>	This meta-class represents the ability to model properties that are specific for a given <code>EcuInstance</code> but on the other hand represent purely diagnostic-related information.  In the spirit of decentralized configuration it is therefore possible to specify the diagnostic-related information related to a given <code>EcuInstance</code> even if the <code>EcuInstance</code> does not yet exist.  <b>Tags:</b> atp.recommendedPackage=DiagnosticEcuInstancePropss			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">Multilanguage</a> , <a href="#">Referrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
eculInstance	<a href="#">EcuInstance</a>	*	ref	This represents the actual <code>EcuInstance</code> to which the information contained in the <code>DiagnosticEcuInstance</code> contribute.  <b>Stereotypes:</b> atpSplittable <b>Tags:</b> atp.Splitkey=eculInstance

Class	DiagnosticEcuInstanceProps			
obdSupport	<a href="#">DiagnosticObdSupportEnum</a>	0..1	attr	This attribute is used to specify the role (if applicable) in which the DiagnosticEcuInstance supports OBD.

**Table 6.66: DiagnosticEcuInstanceProps**

**[constr\_1852] Existence of attribute [DiagnosticEcuInstanceProps.obdSupport](#)** [For each [DiagnosticEcuInstanceProps](#), attribute [obdSupport](#) shall exist at the time when the DEXT is complete.] ()

Enumeration	DiagnosticObdSupportEnum
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::DiagnosticContribution
<b>Note</b>	This meta-class represents the ability to model the roles in which a participation in OBD is foreseen. At the moment, this applies exclusively to the Dem. However, future extension of the Dcm may require this setting as well.
<b>Literal</b>	<b>Description</b>
masterEcu	This represent the role "master ECU". <b>Tags:</b> atp.EnumerationLiteralIndex=0
noObdSupport	This represents the ability to explicitly specify that no participation in OBD is foreseen. <b>Tags:</b> atp.EnumerationLiteralIndex=1
primaryEcu	This represents the role "primary ECU". <b>Tags:</b> atp.EnumerationLiteralIndex=2
secondaryEcu	This represents the role "secondary ECU". <b>Tags:</b> atp.EnumerationLiteralIndex=3

**Table 6.67: DiagnosticObdSupportEnum**

Another OBD-related feature of the Dem is the support for the computation of the *In-Use-Monitor Performance Ratio* (IUMPR). It is possible to define a so-called [DiagnosticIumprGroup](#) that encapsulates the computation of a group of [DiagnosticEvents](#).

The modeling of the [DiagnosticIumprDenominatorGroup](#) supports the configuration of additional environmental conditions that shall be applied on the increment of the IUMPR denominator.

From the modeling point of view, neither [DiagnosticIumprGroup](#) nor [DiagnosticIumprDenominatorGroup](#) reference the associated [DiagnosticEvent](#) directly.

But since the [DiagnosticIumpr](#) referenced in the role [iumpr](#) in turn references at most one [DiagnosticEvent](#) the resulting relation effectively boils down to [DiagnosticIumprGroup](#) and [DiagnosticIumprDenominatorGroup](#) being able to precisely define the collection of affected [DiagnosticEvents](#).

**[TPS\_DEXT\_01148] Standardized values of [DiagnosticIumprGroup.category](#)** [The semantics of meta-class [DiagnosticIumprGroup](#) is identified by means of the value of attribute [DiagnosticIumprGroup.category](#).

Standardized values of attribute [DiagnosticIumprGroup.category](#) are:

- IUMPR\_AFRI1
- IUMPR\_AFRI2

### 6.14.1 Dem Configuration for OBD-II

The modeling of DTCs for the OBD-II use case is pretty similar to the modeling of DTCs for the UDS use case. In other words, [DiagnosticTroubleCodeObd](#) references the [DiagnosticTroubleCodeProps](#) in the same way that this meta-class is referenced from [DiagnosticTroubleCodeUds](#).

Please note that the meta-class [DiagnosticTroubleCodeObd](#) is only applicable for the implementation of OBD-II.

**[TPS\_DEXT\_01111] Legislative freeze frame for the OBD-II case** [For the implementation of OBD-II, the legislative freeze frame is obtained from running the OBD Mode 0x02 service, modeled by means of meta-class [DiagnosticPowertrainFreezeFrame](#).]()

**[constr\_1459] Existence of attributes of [DiagnosticTroubleCodeProps](#)** [The following list of attributes of meta-class [DiagnosticTroubleCodeProps](#) are not required and therefore shall be ignored if the [DiagnosticTroubleCodeProps](#) is referenced in the role `dtcProps` from a [DiagnosticTroubleCodeObd](#):

- [freezeFrame](#)
- [snapshotRecordContent](#)
- [memoryDestination](#)
- [extendedDataRecord](#)
- [aging](#)

]()

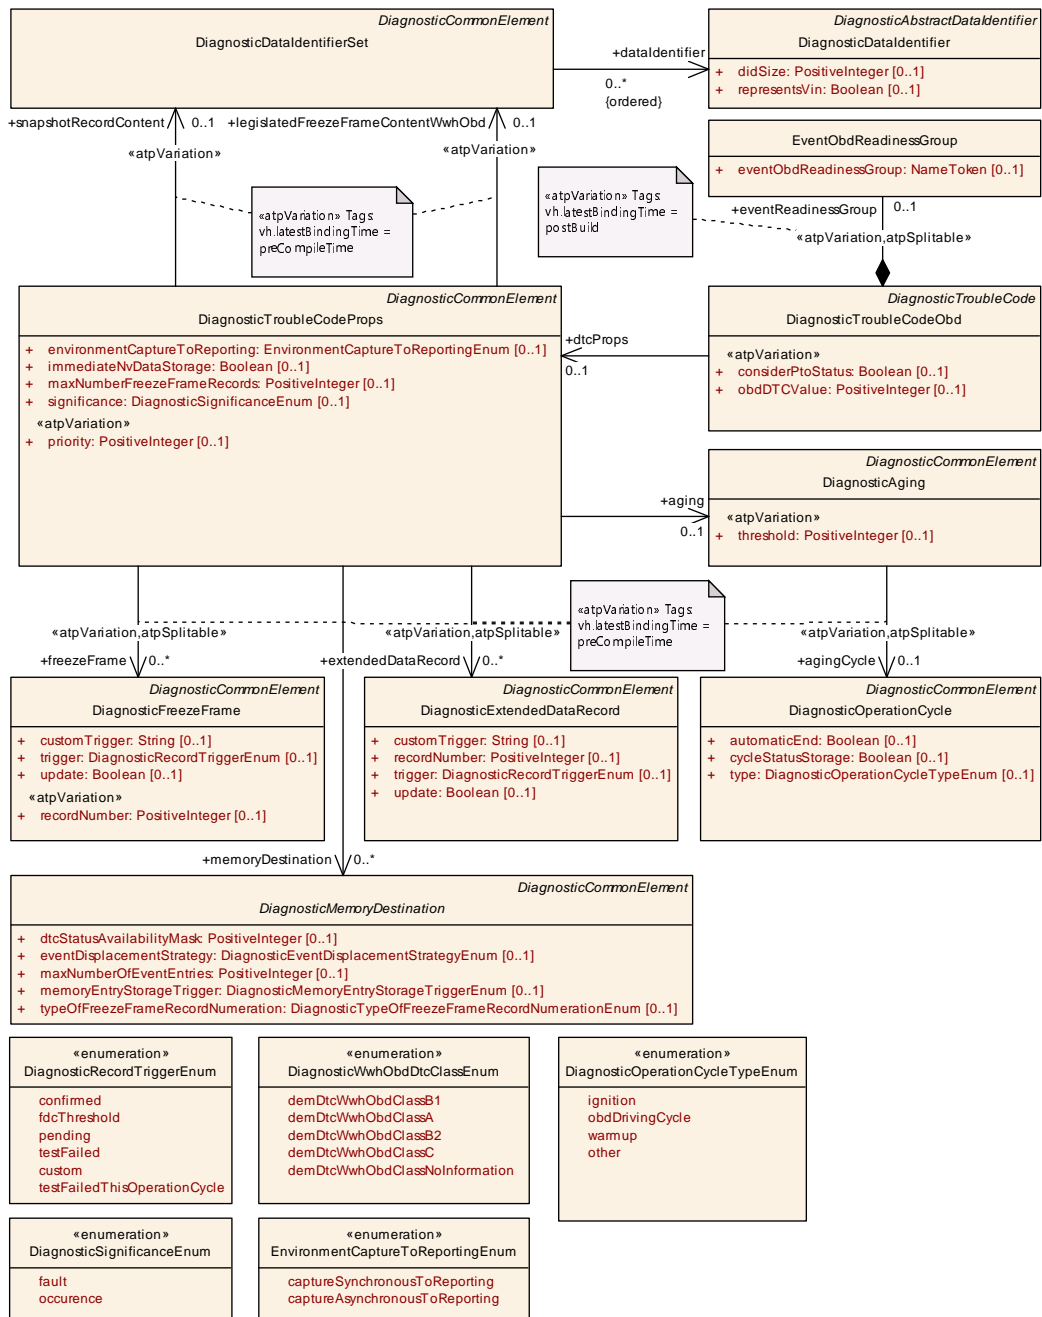

Figure 6.32: Modeling of DTCs for OBD-II

### 6.14.2 Dem Configuration for WWH-OBD

[TPS\_DEXT\_01112] Definition of a diagnostic trouble code for the implementation of WWH-OBD [The definition of a diagnostic trouble code for the implementation of WWH-OBD implies the existence of a `DiagnosticTroubleCodeUds` where attribute `whwObdDtcClass` is set to any value other than `demDtcWwhObdClassNoInformation`.]

**[TPS\_DEXT\_01093] Definition of legislative freeze frame for WWWH-OBD** [The legislative WWWH-OBD freeze frame is identified by the reference `DiagnosticTroubleCodeProps.freezeFrame` where attribute `recordNumber` is set to the value 0.

Optionally, the existence of a reference in the role `DiagnosticTroubleCodeProps.extendedDataRecord` with attribute `recordNumber` set to the value 90 is supported.]()

## 7 Functional Inhibition

### 7.1 Introduction

Conceptually, the Fim [14] is closely related to the Dem since it handles the relation of functionality (expressed via the so-called *function identifier*, or in short-form: *Fid*) and linked `DiagnosticEvents`.

### 7.2 Alias Events

The close relation of Fim and Dem may have consequences in a distributed configuration: it may not be possible to configure the Fim before the Dem is configured because model elements (especially `DiagnosticEvent`) from the Dem configuration are required to model the Fim configuration.

This leads to the definition of `DiagnosticFimAliasEvents` that can be taken to model the Fim configuration even if no Dem configuration exists or if configurations with different Dem event names shall be considered for the final projects.

Please note, however, that the definition of `DiagnosticFimAliasEvents` is not mandatory for the configuration of the Fim. It is possible to directly take the existence of `DiagnosticEvents` into account and thereby bypass the definition of `DiagnosticFimAliasEvents`.

<b>Class</b>	<b>DiagnosticFimAliasEvent</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Fim			
<b>Note</b>	This meta-class is used to represent a given event semantics. However, the name of the actual events used in a specific project is sometimes not defined yet, not known or not in the responsibility of the author. Therefore, the <code>DiagnosticFimAliasEvent</code> has a reference to the actual <code>DiagnosticEvent</code> and by this the final connection is created. <b>Tags:</b> atp.recommendedPackage=DiagnosticFimAliasEvents			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticAbstractAliasEvent</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

<b>Note</b>	This meta-class represents an abstract base class for all diagnostic alias events.
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>
<b>Subclasses</b>	<a href="#">DiagnosticFimAliasEvent</a> , <a href="#">DiagnosticFimAliasEventGroup</a>

Class	DiagnosticAbstractAliasEvent (abstract)			
Attribute	Type	Mult.	Kind	Note
-	-	-	-	-

**Table 7.2: DiagnosticAbstractAliasEvent**

### 7.3 Function Identifier

The support of the Fim as an extension of the Dem meta-model requires the modeling of additional meta-classes to describe the various ways of possible mappings between [DiagnosticEvents](#) and Fids (or, in terms of the meta-model, [DiagnosticFunctionIdentifier](#)).

**[TPS\_DEXT\_01121] Semantics of [DiagnosticFunctionIdentifier](#)** [A [DiagnosticFunctionIdentifier](#) can be inhibited by different sources, i.e. in different ways:

**Event** This corresponds to the [DiagnosticEvent](#).

**Fim Event Group** This represents a group of events that is defined in the scope of the Fim (within the Fim terminology, this is also known as a *summary event*). In the meta-model, a *Fim Event Group* is represented by means of meta-class [DiagnosticFimEventGroup](#).

To emphasize the locality the corresponding meta-class has been named [DiagnosticFimEventGroup](#). [DiagnosticFimEventGroup](#) is able to reference 0..\* [DiagnosticEvents](#) in the role [event](#).

This way, the membership of [DiagnosticEvents](#) in the hypothetical group of events formed by the [DiagnosticFimEventGroup](#) is expressed.

]([RS\\_DEXT\\_00060](#))

Please note that [DiagnosticEvent](#) is discussed in chapter [6.2](#).

Class	DiagnosticFunctionIdentifier			
Package	M2::AUTOSARTemplates::DiagnosticExtract::Fim			
Note	This meta-class represents a diagnostic function identifier (a.k.a. FID). <b>Tags:</b> atp.recommendedPackage=DiagnosticFunctionIdentifiers

Attribute	Type	Mult.	Kind	Note
-	-	-	-	-

**Table 7.3: DiagnosticFunctionIdentifier**

Finally all sources will refer to [DiagnosticEvents](#).

## 7.4 Mapping between Inhibition Source and Diagnostic Event

The configuration of the Fim requires the clarification of the relation between a particular inhibition source (modeled as [DiagnosticFunctionInhibitSource](#)) and one or many diagnostic events (modeled as [DiagnosticEvent](#)).

The easiest way to provide this information is the usage of the [DiagnosticInhibitSourceEventMapping](#) that is able to create an association between a [DiagnosticFunctionInhibitSource](#) on the one hand and either a [DiagnosticEvent](#) or a [DiagnosticFimEventGroup](#) on the other hand.

This is only possible if the [DiagnosticEvents](#) referenced by the [DiagnosticInhibitSourceEventMapping](#) already exist. This existence is subject to the development workflow and may or may not apply. For more details, please refer to Figure 7.1.

<b>Class</b>	<b>DiagnosticInhibitSourceEventMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Fim			
<b>Note</b>	This meta-class represents the ability to map a <a href="#">DiagnosticFunctionInhibitSource</a> directly to alternatively one <a href="#">DiagnosticEvent</a> or one <a href="#">DiagnosticFimSummaryEvent</a> . This model element shall be used if the approach via the alias events is not applicable, i.e. when diagnostic events defined by the Dem are already available at the time the Fim configuration within the diagnostic extract is created. <b>Tags:</b> atp.recommendedPackage=DiagnosticInhibitSourceEventMappings			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnosticEvent	<a href="#">DiagnosticEvent</a>	0..1	ref	This represents the reference to the diagnostic event.
eventGroup	<a href="#">DiagnosticFimEventGroup</a>	0..1	ref	This represents the reference to the event group
inhibitionSource	<a href="#">DiagnosticFunctionInhibitSource</a>	0..1	ref	This represents the reference to the inhibition source.

**Table 7.4: DiagnosticInhibitSourceEventMapping**

## 7.5 Alias Event Mapping

**[TPS\_DEXT\_01095] Definition of “alias” diagnostic event for the creation of a Fim configuration in the diagnostic extract** [A pre-configuration of the Fim function inhibition can be created on the basis of the following meta-classes:

**[DiagnosticFimAliasEventMapping](#)** in this case the definition of “alias” diagnostic event corresponds to a single [DiagnosticEvent](#)

**[DiagnosticFimAliasEventGroupMapping](#)** in this case the definition of a group of “alias” diagnostic events corresponds to a group of single [DiagnosticEvents](#)

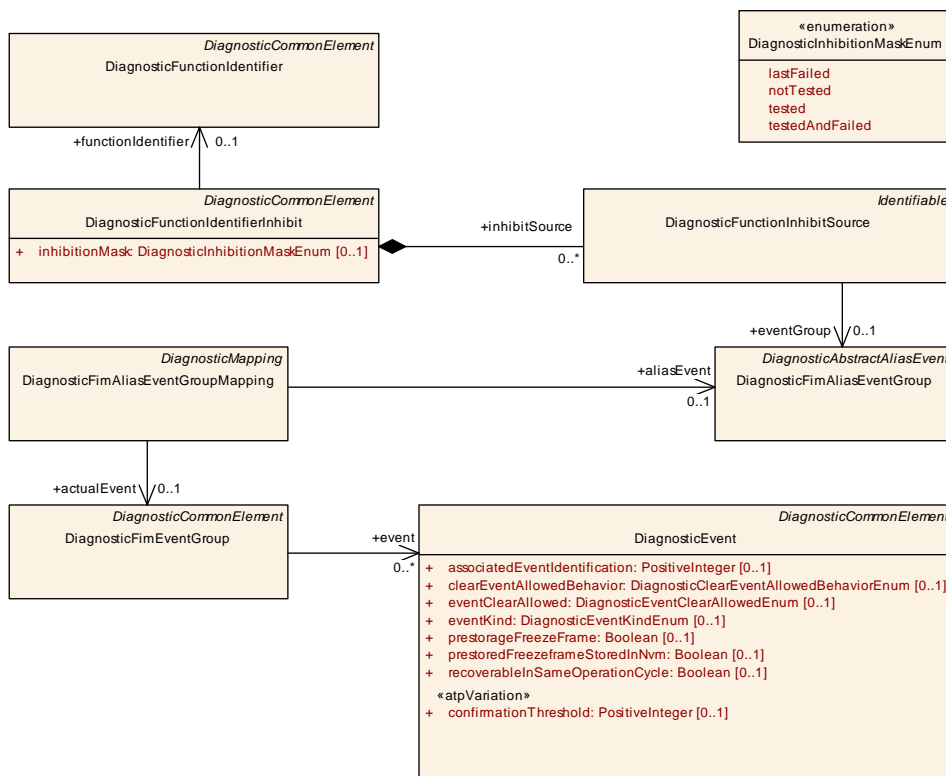

Figure 7.3: Inhibition of event groups in Fim for diagnostics configuration

## 7.6 Mapping of Function Identifiers to the corresponding Monitors

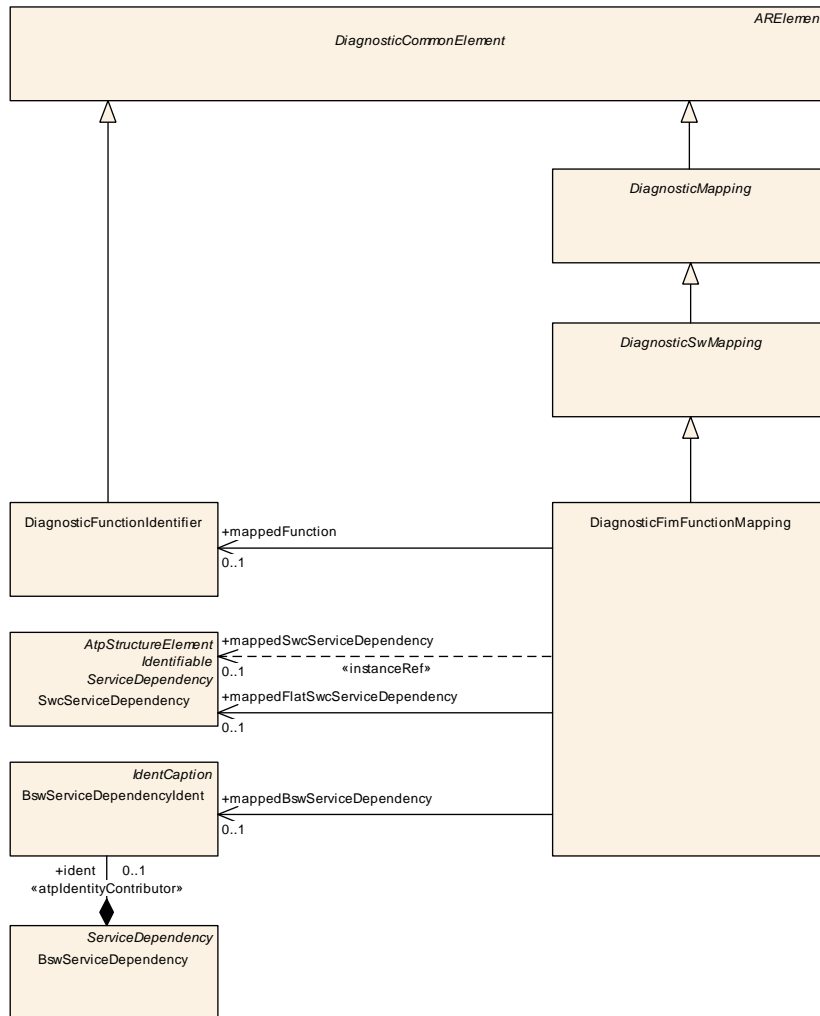

Beside the ability to model a function inhibition itself, it is equally important that this inhibition can be connected to the applicable monitors.

This relation can be expressed by means of the `DiagnosticFimFunctionMapping`. The details are sketched in Figure 7.4.

**[TPS\_DEXT\_01102] Semantics of `DiagnosticFimFunctionMapping`** [The meta-class `DiagnosticFimFunctionMapping` represents the ability to map a `DiagnosticFunctionIdentifier` to a `SwcServiceDependency` that addresses function inhibition.] (RS\_DEXT\_00063)

[constr\_1454] **DiagnosticFimFunctionMapping** shall only reference a **SwcServiceDependency** that aggregates **FunctionInhibitionNeeds** [A **DiagnosticFimFunctionMapping** shall only reference a **SwcServiceDependency** that aggregates **FunctionInhibitionNeeds** in the role **serviceNeeds**.]()

The modeling of this mapping is closely related to the existing modeling of mappings that involve **SwcServiceDependency** in the context of the diagnostic extract.

**Figure 7.4: Mapping of function identifiers to the corresponding monitors**

<b>Class</b>	<b>DiagnosticFimFunctionMapping</b>
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::ServiceMapping
<b>Note</b>	This meta-class represents the ability to define a mapping between a function identifier (FID) and the corresponding SwcServiceDependency in the application software resp. basic software. <b>Tags:</b> atp.recommendedPackage=DiagnosticFimFunctionMappings
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">DiagnosticSwMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>

<b>Class</b>		<b>DiagnosticFimFunctionMapping</b>		
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
mappedBswServiceDependency	<a href="#">BswServiceDependencyIdent</a>	0..1	ref	This is supposed to represent a reference to a BswServiceDependency. the latter is not derived from Referrable and therefore this detour needs to be implemented to still let BswServiceDependency become the target of a reference.
mappedFlatSwcServiceDependency	<a href="#">SwcServiceDependency</a>	0..1	ref	This represents the ability to refer to an AtomicSwComponentType that is available without the definition of how it will be embedded into the component hierarchy.
mappedFunction	<a href="#">DiagnosticFunctionIdentifier</a>	0..1	ref	This represents the mapped FID.
mappedSwcServiceDependency	<a href="#">SwcServiceDependency</a>	0..1	iref	This represents the ability to point into the component hierarchy (under possible consideration of the root SoftwareComposition).  <b>InstanceRef implemented by:</b> <a href="#">SwcServiceDependencyInSystemInstanceRef</a>

## 8 Diagnostics on J1939

### 8.1 Introduction

Diagnostics on J1939 is to some extent similar to the “rest of the world”. In other words, J1939 uses a Dcm and a Dem similarly as other communication networks do.

On the other hand, there are significant differences between J1939 and the “rest of the world” that justify the creation of a separate chapter that focuses entirely on how a diagnostic extract for J1939 shall look like.

That said, a support for Dcm-related model elements for J1939 is mainly happening in the domain of the AUTOSAR System Template [6] rather than in the scope of this document.

The actual configuration of services supported by the J1939Dcm is done by assigning DMx messages in the System Description.

The mapping of the [J1939DcmIPdu](#)s to the diagnostic services of J1939 Dcm happens during derivation to EcuC.

In the following sections this document focuses on explaining the modeling with respect to the Dem.

### 8.2 Suspect Parameter Number

In the J1939 terminology, a *Suspect Parameter Number* represents a signal identifier. The numerical value of this signal identifier is stored in the attribute [DiagnosticJ1939Spn.spn](#).

Conceptually, the *Suspect Parameter Number* binds to the [SystemSignal](#), i.e. by attaching a *Suspect Parameter Number* to a [SystemSignal](#) a J1939 signal is created.

At the first sight, it may seem like a good idea to attach the spn attribute to the [SystemSignal](#) itself. However, this would place a very specific J1939-related model semantics in a very prominent place.

This just doesn't seem right and thanks to the existence of meta-class [DiagnosticJ1939SpnMapping](#) it is possible to “inject” the J1939 signal identifier into a [SystemSignal](#) without actually touching the [SystemSignal](#).

**[TPS\_DEXT\_01103] Semantics of meta-class [DiagnosticJ1939SpnMapping](#)**  
[The [DiagnosticJ1939SpnMapping](#) has the ability to associate a [DiagnosticJ1939Spn](#) with a [SystemSignal](#). By this means it is possible to express that a given [SystemSignal](#) is taken to transport a J1939 *Suspect Parameter Number*.] ([RS\\_DEXT\\_00064](#))

Please note that the modeling of the [DiagnosticJ1939SpnMapping](#) also implies that the same SPN can be sent by different [J1939NmNodes](#). This ability is positively supported.

<b>Class</b>	<b>DiagnosticJ1939Spn</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::J1939			
<b>Note</b>	This meta-class represents the ability to model a J1939 Suspect Parameter Number (SPN). <b>Tags:</b> atp.recommendedPackage=DiagnosticJ1939Spns			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
spn	PositiveInteger	0..1	attr	This attribute represents the concrete numerical identification for the enclosing SPN.

**Table 8.1: DiagnosticJ1939Spn**

**[constr\_1856] Existence of attribute [DiagnosticJ1939Spn.spn](#)** [For each [DiagnosticJ1939Spn](#), attribute `spn` shall exist **at the time when the DEXT is complete.**]  
()

### 8.3 J1939Dcm-related Modeling

The modeling of the J1939Dcm-related configuration within the Diagnostic Extract extends to the definition of a new attribute of meta-class [J1939Cluster](#). The latter provides an attribute named `networkId`. For more information, please refer to [6].

The actual configuration of the services supported by J1939Dcm is done by assigning DMx messages in the System Description.

### 8.4 Dem-related Modeling

The modeling of Dem-related support for J1939 is centered around the [DiagnosticJ1939Node](#). This meta-class literally acts as a sort of “inverted”<sup>1</sup> hub for all the Dem-related model elements. The [DiagnosticJ1939Node](#) represents a specific function, or in terms of the J1939 terminology, a *Controller Application*.

This aspect is stressed in Figure 8.1.

Since, according to the J1939 concept, each *controller application* represents an independent entity in terms of network management, the following constraint applies:

**[constr\_1455] Relation of [DiagnosticJ1939Node](#) to [J1939NmNode](#)** [Each [J1939NmNode](#) shall only be referenced in the role `nmNode` by a single [DiagnosticJ1939Node](#).]()

<sup>1</sup>Meaning: several meta-classes are referencing the [DiagnosticJ1939Node](#).

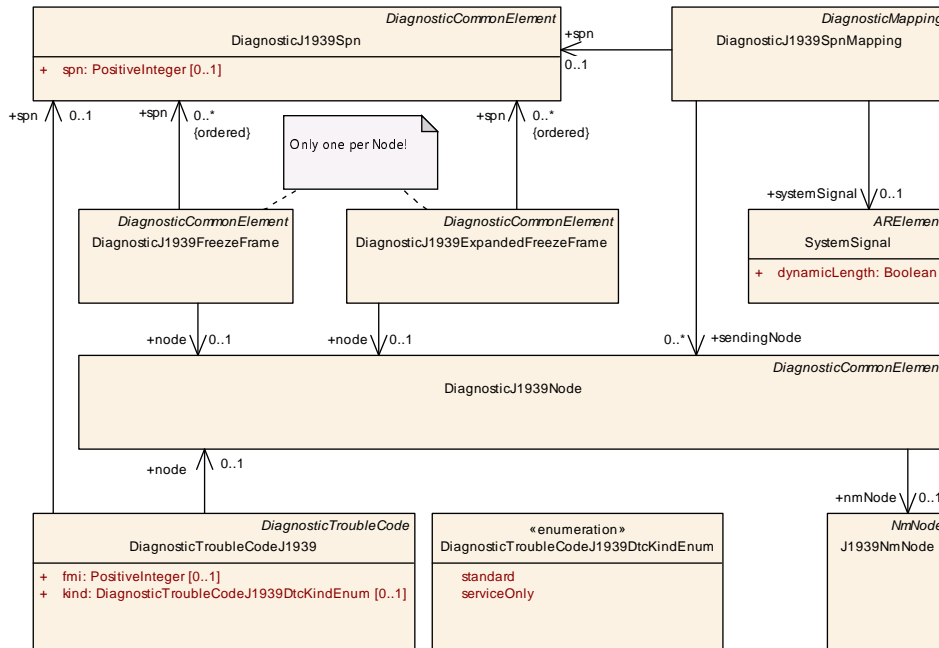

Figure 8.1: Big Picture of J1939 diagnostics configuration

J1939 supports the capturing of information similar to the definition of *DiagnosticFreezeFrame*, as explained in chapter 6.5. In the case of J1939, however, two different kinds of freeze frames can be defined:

**[TPS\_DEXT\_01104] Difference between *DiagnosticJ1939FreezeFrame* and *DiagnosticJ1939ExpandedFreezeFrame*** [A *DiagnosticJ1939FreezeFrame* is transmitted via J1939 DM04 while a *DiagnosticJ1939ExpandedFreezeFrame* is transmitted via J1939 DM24/DM25.] (*RS\_DEXT\_00065*)

**[TPS\_DEXT\_01105] Relation of *DiagnosticJ1939Spn* to *DiagnosticJ1939FreezeFrame* and *DiagnosticJ1939ExpandedFreezeFrame*** [It is possible that a given *DiagnosticJ1939Spn* is referenced by both a *DiagnosticJ1939FreezeFrame* and a *DiagnosticJ1939ExpandedFreezeFrame*.

In other words, the *Suspect Parameter Number* can be part of a normal freeze frame and, at the same time, an expanded freeze frame.] (*RS\_DEXT\_00065*)

<b>Class</b>	<b>DiagnosticJ1939FreezeFrame</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::J1939			
<b>Note</b>	This meta-class represents the ability to model a J1939 Freeze Frame. <b>Tags:</b> atp.recommendedPackage=DiagnosticJ1939FreezeFrames			
<b>Base</b>	<i>ARElement</i> , <i>ARObject</i> , <i>CollectableElement</i> , <i>DiagnosticCommonElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>PackageableElement</i> , <i>Referrable</i>

**[constr\_1780] Existence of attribute [DiagnosticTroubleCodeJ1939.fmi](#)** [For each [DiagnosticTroubleCodeJ1939](#), attribute [fmi](#) shall exist at the time when the DEXT is complete.]()

**[constr\_1781] Existence of attribute [DiagnosticTroubleCodeJ1939.spn](#)** [For each [DiagnosticTroubleCodeJ1939](#), attribute [spn](#) shall exist at the time when the DEXT is complete.]()

**[TPS\_DEXT\_01107] Definition of service-only DTC** [It is possible to specify whether given DTCs on J1939 are only relevant for a service session in a garage or workshop. The common property of service-only DTCs is that they shall be located in a memory section that is exclusively used by service-only DTCs.] ([RS\\_DEXT\\_00067](#))

The statement made by [\[TPS\\_DEXT\\_01107\]](#) needs to be secured by two constraints:

**[constr\_1457] Service-only DTCs shall refer to a common memory section** [All [DiagnosticTroubleCodeJ1939](#) with attribute [kind](#) set to the value [serviceOnly](#) that reference the same [DiagnosticJ1939Node](#) shall also reference the same [DiagnosticTroubleCodeProps.memoryDestination](#).]()

**[constr\_1458] Reference to [DiagnosticMemoryDestination](#)** [A [DiagnosticMemoryDestination](#) that is referenced by a [DiagnosticTroubleCodeJ1939.dtcProps.memoryDestination](#) where the value of attribute [DiagnosticTroubleCodeJ1939.kind](#) is set to [serviceOnly](#) shall not be referenced by any other [DiagnosticTroubleCodeJ1939](#) where attribute [kind](#) is set to any other value than [serviceOnly](#).]()

## 8.5 Mapping between Software-Components and Controller Applications

Another aspect of the modeling of J1939 diagnostics is that a mapping between the [DiagnosticJ1939Node](#) (which formally represents a *Controller Application*) and the AUTOSAR way of specifying a “function” (by means of the meta-class [SwComponent-Prototype](#)) is required.

This leads to the definition of the [DiagnosticJ1939SwMapping](#).

[TPS\_DEXT\_01108] Purpose of the **DiagnosticJ1939SwMapping** [The purpose of the **DiagnosticJ1939SwMapping** is to associate a **SwComponentPrototype** with a **DiagnosticJ1939Node**. By this means a concrete functionality is mapped to the abstract J1939 *Controller Application*.] (*RS\_DEXT\_00066*)

Please note that the basis for this mapping is the existence of a **CompositionSwComponentType** rather than a **System**. The mapping can therefore (and this is the main motivation for this kind of modeling) be done independently of the deployment to a concrete project.

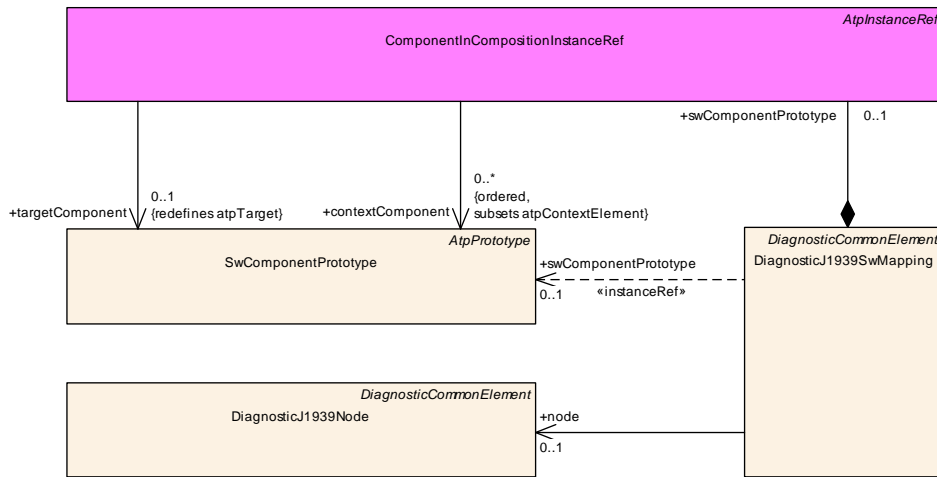

Figure 8.2: Mapping between Software-Components and Controller Applications

<b>Class</b>	<b>DiagnosticJ1939SwMapping</b>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::SwMapping			
<b>Note</b>	This meta-class represents the ability to map a piece of application software to a J1939DiagnosticNode. By this means the diagnostic configuration can be associated with the application software. <b>Tags:</b> atp.recommendedPackage=DiagnosticJ1939SwMappings			
<b>Base</b>	<i>ARElement, ARObject, CollectableElement, DiagnosticCommonElement, Identifiable, Multilanguage Referrable, PackageableElement, Referrable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
node	<a href="#">DiagnosticJ1939Node</a>	0..1	ref	This represents the mapped DiagnosticJ1939Node.
swComponent Prototype	<a href="#">SwComponent Prototype</a>	0..1	iref	This represents the mapped SwComponentPrototype. <b>InstanceRef implemented by:</b> ComponentInComposition InstanceRef

Table 8.8: DiagnosticJ1939SwMapping

## 8.6 Mapping between DiagnosticEvent and J1939 DTC

[TPS\_DEXT\_01145] Semantics of meta-class **DiagnosticEventToTroubleCodeJ1939Mapping** [The **DiagnosticEventToTroubleCodeJ1939Mapping** is used to assign one (1:1) or multiple (n:1) **DiagnosticEvents** to a **DiagnosticTroubleCodeJ1939**.

In case of an n:1 mapping, multiple instances of `DiagnosticEventToTroubleCodeJ1939Mapping` with the same reference of role `troubleCodeJ1939` but different references of role `diagnosticEvent` have to be defined. [\(RS\\_DEXT\\_00067\)](#)

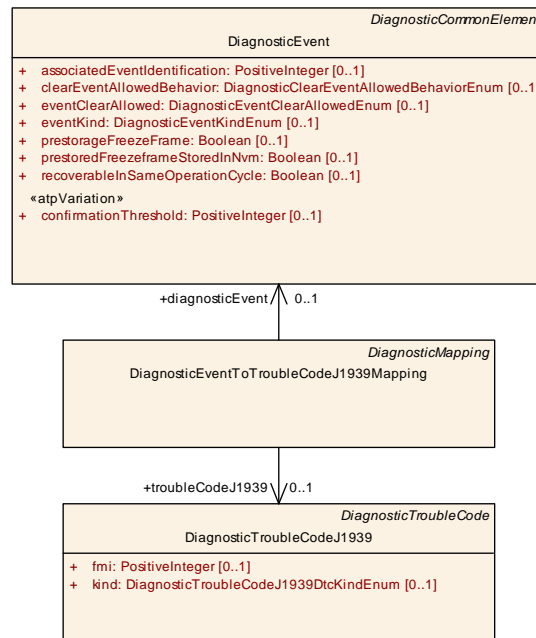

Figure 8.3: Mapping between `DiagnosticEvent` and `DiagnosticTroubleCodeJ1939`

<b>Class</b>	<code>DiagnosticEventToTroubleCodeJ1939Mapping</code>			
<b>Package</b>	M2::AUTOSARTemplates::DiagnosticExtract::Dem::J1939			
<b>Note</b>	By means of this meta-class it is possible to associate a <code>DiagnosticEvent</code> to a <code>DiagnosticTroubleCodeJ1939</code> . <b>Tags:</b> atp.recommendedPackage=DiagnosticMappings			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">DiagnosticCommonElement</a> , <a href="#">DiagnosticMapping</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnosticEvent	<a href="#">DiagnosticEvent</a>	0..1	ref	Reference to a <code>DiagnosticEvent</code> to which a J1939 Diagnostic Trouble Code is assigned.
troubleCode J1939	<a href="#">DiagnosticTroubleCodeJ1939</a>	0..1	ref	Reference to a J1939 Diagnostic Trouble Code to which a <code>DiagnosticEvent</code> is assigned.

Table 8.9: `DiagnosticEventToTroubleCodeJ1939Mapping`

**[constr\_1857] Existence of the reference `DiagnosticEventToTroubleCodeJ1939Mapping.diagnosticEvent`** [For each `DiagnosticEventToTroubleCodeJ1939Mapping`, reference `diagnosticEvent` shall exist **at the time when the DEXT is complete.**]()

**[constr\_1858] Existence of the attribute `DiagnosticEventToTroubleCodeJ1939Mapping.troubleCodeJ1939`** [For each `DiagnosticEventToTroubleCodeJ1939Mapping`, attribute `troubleCodeJ1939` shall exist **at the time when the DEXT is complete.**]()

## A Mentioned Class Tables

For the sake of completeness, this chapter contains a set of class tables representing meta-classes mentioned in the context of this document but which are not contained directly in the scope of describing specific meta-model semantics.

<b>Class</b>	<b>ARElement</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::ARPackage			
<b>Note</b>	An element that can be defined stand-alone, i.e. without being part of another element (except for packages of course).			
<b>Base</b>	<i>ARObject</i> , <i>CollectableElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>PackageableElement</i> , <i>Referrable</i>			
<b>Subclasses</b>	AclObjectSet, AclOperation, AclPermission, AclRole, AliasNameSet, ApplicationPartition, <i>AutosarDataType</i> , <i>BaseType</i> , BlueprintMappingSet, BswEntryRelationshipSet, <i>BswModuleDescription</i> , BswModuleEntry, BuildActionManifest, CalibrationParameterValueSet, ClientIdDefinitionSet, ClientServerInterfaceToBswModuleEntryBlueprintMapping, Collection, <i>CompuMethod</i> , ConsistencyNeedsBlueprintSet, ConstantSpecification, ConstantSpecificationMappingSet, CpSoftwareCluster, CpSoftwareClusterBinaryManifestDescriptor, CpSoftwareClusterMappingSet, CpSoftwareClusterResourcePool, CryptoServiceCertificate, CryptoServiceKey, CryptoServicePrimitive, CryptoServiceQueue, <i>DataConstr</i> , DataExchangePoint, DataTransformationSet, DataTypeMappingSet, <i>DiagnosticCommonElement</i> , <i>DiagnosticConnection</i> , <i>DiagnosticContributionSet</i> , Documentation, E2EProfileCompatibilityProps, EcucDefinitionCollection, EcucDestinationUriDefSet, EcucModuleConfigurationValues, EcucModuleDef, EcucValueCollection, EndToEndProtectionSet, EthIpProps, EthTcpIpCompProps, EthTcpIpProps, EvaluatedVariantSet, FMFeature, FMFeatureMap, FMFeatureModel, FMFeatureSelectionSet, FlatMap, GeneralPurposeConnection, HwCategory, HwElement, HwType, IPsecConfigProps, IPv6ExtHeaderFilterSet, <i>IdsCommonElement</i> , IdsDesign, <i>Implementation</i> , InterpolationRoutineMappingSet, J1939ControllerApplication, KeywordSet, LifeCycleInfoSet, LifeCycleStateDefinitionGroup, McFunction, McGroup, <i>ModeDeclarationGroup</i> , ModeDeclarationMappingSet, PhysicalDimension, PhysicalDimensionMappingSet, <i>PortInterface</i> , PortInterfaceMappingSet, PortPrototypeBlueprint, PostBuildVariantCriterion, PostBuildVariantCriterionValueSet, PredefinedVariant, RapidPrototypingScenario, SdgDef, SignalServiceTranslationPropsSet, SomeipSdClientEventGroupTimingConfig, SomeipSdClientServiceInstanceConfig, SomeipSdServerEventGroupTimingConfig, SomeipSdServerServiceInstanceConfig, SwAddrMethod, SwAxisType, <i>SwComponentType</i> , SwRecordLayout, SwSystemconst, SwSystemconstantValueSet, SwcBswMapping, <i>System</i> , <i>SystemSignal</i> , SystemSignalGroup, TDCpSoftwareClusterMappingSet, TcpOptionFilterSet, <i>TimingExtension</i> , TlvDataIdDefinitionSet, TransformationPropsSet, <i>Unit</i> , UnitGroup, ViewMapSet			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table A.1: ARElement**

<b>Class</b>	<b>ARPackage</b>			
<b>Package</b>	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::ARPackage			
<b>Note</b>	AUTOSAR package, allowing to create top level packages to structure the contained ARElements. ARPackages are open sets. This means that in a file based description system multiple files can be used to partially describe the contents of a package. This is an extended version of MSR's SW-SYSTEM.			
<b>Base</b>	<i>ARObject</i> , <i>AtpBlueprint</i> , <i>AtpBlueprintable</i> , <i>CollectableElement</i> , <i>Identifiable</i> , <i>MultilanguageReferrable</i> , <i>Referrable</i>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

Class	ARPackage			
arPackage	<a href="#">ARPackage</a>	*	aggr	This represents a sub package within an ARPackage, thus allowing for an unlimited package hierarchy. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=arPackage.shortName, arPackage.variationPoint.shortLabel vh.latestBindingTime=blueprintDerivationTime xml.sequenceOffset=30
element	PackageableElement	*	aggr	Elements that are part of this package <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=element.shortName, element.variationPoint.shortLabel vh.latestBindingTime=systemDesignTime xml.sequenceOffset=20
referenceBase	ReferenceBase	*	aggr	This denotes the reference bases for the package. This is the basis for all relative references within the package. The base needs to be selected according to the base attribute within the references. <b>Stereotypes:</b> atpSplitable <b>Tags:</b> atp.Splitkey=referenceBase.shortLabel xml.sequenceOffset=10

**Table A.2: ARPackage**

Class	ApplicationArrayType			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
<b>Note</b>	An application data type which is an array, each element is of the same application data type. <b>Tags:</b> atp.recommendedPackage=ApplicationDataTypes			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">ApplicationCompositeDataType</a> , <a href="#">ApplicationDataType</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">AutosarDataType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
Attribute	Type	Mult.	Kind	Note
dynamicArray SizeProfile	String	0..1	attr	Specifies the profile which the array will follow if it is a variable size array.
element	ApplicationArray Element	0..1	aggr	This association implements the concept of an array element. That is, in some cases it is necessary to be able to identify single array elements, e.g. as input values for an interpolation routine.

**Table A.3: ApplicationArrayType**

Class	ApplicationDataType (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
<b>Note</b>	ApplicationDataType defines a data type from the application point of view. Especially it should be used whenever something "physical" is at stake.  An ApplicationDataType represents a set of values as seen in the application model, such as measurement units. It does not consider implementation details such as bit-size, endianness, etc.  It should be possible to model the application level aspects of a VFB system by using ApplicationDataTypes only.			

<b>Class</b>	<b>ApplicationDataType</b> (abstract)			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">AutosarDataType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">ApplicationCompositeDataType</a> , <a href="#">ApplicationPrimitiveDataType</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table A.4: ApplicationDataType**

<b>Class</b>	<b>AtomicSwComponentType</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Components			
<b>Note</b>	An atomic software component is atomic in the sense that it cannot be further decomposed and distributed across multiple ECUs.			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a> , <a href="#">SwComponentType</a>			
<b>Subclasses</b>	<a href="#">ApplicationSwComponentType</a> , <a href="#">ComplexDeviceDriverSwComponentType</a> , <a href="#">EcuAbstractionSwComponentType</a> , <a href="#">NvBlockSwComponentType</a> , <a href="#">SensorActuatorSwComponentType</a> , <a href="#">ServiceProxySwComponentType</a> , <a href="#">ServiceSwComponentType</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
internalBehavior	SwcInternalBehavior	0..1	aggr	The SwcInternalBehaviors owned by an AtomicSwComponentType can be located in a different physical file. Therefore the aggregation is <<atpSplitable>>.  <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=internalBehavior.shortName, internalBehavior.variationPoint.shortLabel vh.latestBindingTime=preCompileTime
symbolProps	SymbolProps	0..1	aggr	This represents the SymbolProps for the AtomicSwComponentType.  <b>Stereotypes:</b> atpSplitable <b>Tags:</b> atp.Splitkey=symbolProps.shortName

**Table A.5: AtomicSwComponentType**

<b>Class</b>	<b>AtpInstanceRef</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::GenericStructure::AbstractStructure			
<b>Note</b>	An M0 instance of a classifier may be represented as a tree rooted at that instance, where under each node come the sub-trees representing the instances which act as features under that node.  An instance ref specifies a navigation path from any M0 tree-instance of the base (which is a classifier) to a leaf (which is an instance of the target).			
<b>Base</b>	<a href="#">ARObject</a>			
<b>Subclasses</b>	<a href="#">AnyInstanceRef</a> , <a href="#">ApplicationCompositeElementInPortInterfaceInstanceRef</a> , <a href="#">ComponentInCompositionInstanceRef</a> , <a href="#">ComponentInSystemInstanceRef</a> , <a href="#">DataPrototypeInPortInterfaceInstanceRef</a> , <a href="#">DataPrototypeInSystemInstanceRef</a> , <a href="#">InnerDataPrototypeGroupInCompositionInstanceRef</a> , <a href="#">InnerPortGroupInCompositionInstanceRef</a> , <a href="#">InnerRunnableEntityGroupInCompositionInstanceRef</a> , <a href="#">InstanceEventInCompositionInstanceRef</a> , <a href="#">ModeDeclarationGroupPrototypeInSystemInstanceRef</a> , <a href="#">ModeGroupInAtomicSwcInstanceRef</a> , <a href="#">ModelInBswModuleDescriptionInstanceRef</a> , <a href="#">ModelInSwcInstanceRef</a> , <a href="#">OperationArgumentInComponentInstanceRef</a> , <a href="#">OperationInAtomicSwcInstanceRef</a> , <a href="#">OperationInSystemInstanceRef</a> , <a href="#">PModelInSystemInstanceRef</a> , <a href="#">ParameterDataPrototypeInSystemInstanceRef</a> , <a href="#">ParameterInAtomicSWCTypeInstanceRef</a> , <a href="#">PortGroupInSystemInstanceRef</a> , <a href="#">PortInCompositionTypeInstanceRef</a> , <a href="#">RModelIn</a>			

<b>Class</b>	<b>AtpInstanceRef</b> (abstract)			
	<p style="text-align: center;">△</p> <p>AtomicSwcInstanceRef, RteEventInEcuInstanceRef, RunnableEntityInCompositionInstanceRef, <a href="#">SwcServiceDependencyInSystemInstanceRef</a>, <a href="#">TriggerInAtomicSwcInstanceRef</a>, <a href="#">TriggerInSystemInstanceRef</a>, <a href="#">VariableAccessInEcuInstanceRef</a>, <a href="#">VariableDataPrototypeInCompositionInstanceRef</a>, <a href="#">VariableDataPrototypeInSystemInstanceRef</a>, <a href="#">VariableInAtomicSWCTypeInstanceRef</a>, <a href="#">VariableInAtomicSwcInstanceRef</a>, <a href="#">VariableInComponentInstanceRef</a></p>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
atpBase	AtpClassifier	1	ref	This is the base from which the navigaion path starts. <b>Stereotypes:</b> atpAbstract; atpDerived
atpContext Element (ordered)	AtpPrototype	*	ref	This is one particular step in the navigation path. <b>Stereotypes:</b> atpAbstract
atpTarget	AtpFeature	1	ref	This is the target of the instance ref. In other words it is the terminal of the navigation path. <b>Stereotypes:</b> atpAbstract

**Table A.6: AtpInstanceRef**

<b>Class</b>	<b>BaseType</b> (abstract)			
<b>Package</b>	M2::MSR::AsamHdo::BaseTypes			
<b>Note</b>	This abstract meta-class represents the ability to specify a platform dependant base type.			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">SwBaseType</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
baseType Definition	BaseTypeDefinition	1	aggr	This is the actual definition of the base type. <b>Tags:</b> xml.roleElement=false xml.roleWrapperElement=false xml.sequenceOffset=20 xml.typeElement=false xml.typeWrapperElement=false

**Table A.7: BaseType**

<b>Class</b>	<b>BaseTypeDirectDefinition</b>			
<b>Package</b>	M2::MSR::AsamHdo::BaseTypes			
<b>Note</b>	This BaseType is defined directly (as opposite to a derived BaseType)			
<b>Base</b>	<a href="#">ARObject</a> , <a href="#">BaseTypeDefinition</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
baseType Encoding	BaseTypeEncoding String	0..1	attr	This specifies, how an object of the current BaseType is encoded, e.g. in an ECU within a message sequence. <b>Tags:</b> xml.sequenceOffset=90
baseTypeSize	PositiveInteger	0..1	attr	Describes the length of the data type specified in the container in bits. <b>Tags:</b> xml.sequenceOffset=70
byteOrder	ByteOrderEnum	0..1	attr	This attribute specifies the byte order of the base type. <b>Tags:</b> xml.sequenceOffset=110

Class	BaseTypeDirectDefinition			
memAlignment	PositiveInteger	0..1	attr	<p>This attribute describes the alignment of the memory object in bits. E.g. "8" specifies, that the object in question is aligned to a byte while "32" specifies that it is aligned four byte. If the value is set to "0" the meaning shall be interpreted as "unspecified".</p> <p><b>Tags:</b>xml.sequenceOffset=100</p>
native Declaration	NativeDeclarationString	0..1	attr	<p>This attribute describes the declaration of such a base type in the native programming language, primarily in the Programming language C. This can then be used by a code generator to include the necessary declarations into a header file. For example</p> <p>BaseType with shortName: "MyUnsignedInt" native Declaration: "unsigned short"</p> <p>Results in</p> <pre>typedef unsigned short MyUnsignedInt;</pre> <p>If the attribute is not defined the referring Implementation DataTypes will not be generated as a typedef by RTE.</p> <p>If a nativeDeclaration type is given it shall fulfill the characteristic given by BaseTypeEncoding and BaseType Size.</p> <p>This is required to ensure the consistent handling and interpretation by software components, RTE, COM and MCM systems.</p> <p><b>Tags:</b>xml.sequenceOffset=120</p>

**Table A.8: BaseTypeDirectDefinition**

Class	BswModuleDescription			
Package	M2::AUTOSARTemplates::BswModuleTemplate::BswOverview			
Note	<p>Root element for the description of a single BSW module or BSW cluster. In case it describes a BSW module, the short name of this element equals the name of the BSW module.</p> <p><b>Tags:</b>atp.recommendedPackage=BswModuleDescriptions</p>			
Base	<p><a href="#">ARElement</a>, <a href="#">ARObject</a>, <a href="#">AtpBlueprint</a>, <a href="#">AtpBlueprintable</a>, <a href="#">AtpClassifier</a>, <a href="#">AtpFeature</a>, <a href="#">AtpStructureElement</a>, <a href="#">CollectableElement</a>, <a href="#">Identifiable</a>, <a href="#">MultilanguageReferrable</a>, <a href="#">PackageableElement</a>, <a href="#">Referrable</a></p>			
Attribute	Type	Mult.	Kind	Note
bswModule Dependency	BswModuleDependency	*	aggr	<p>Describes the dependency to another BSW module.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation</p> <p><b>Tags:</b> atp.Splitkey=bswModuleDependency.shortName, bswModuleDependency.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=20</p>
bswModule Documentation	SwComponent Documentation	0..1	aggr	<p>This adds a documentation to the BSW module.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation</p> <p><b>Tags:</b> atp.Splitkey=bswModuleDocumentation, bswModuleDocumentation.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=6</p>

Class	BswModuleDescription			
expectedEntry	BswModuleEntry	*	ref	<p>Indicates an entry which is required by this module. Replacement of outgoingCallback / requiredEntry.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation</p> <p><b>Tags:</b> atp.Splitkey=expectedEntry.bswModuleEntry, expectedEntry.variationPoint.shortLabel vh.latestBindingTime=preCompileTime</p>
implementedEntry	BswModuleEntry	*	ref	<p>Specifies an entry provided by this module which can be called by other modules. This includes "main" functions, interrupt routines, and callbacks. Replacement of providedEntry / expectedCallback.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation</p> <p><b>Tags:</b> atp.Splitkey=implementedEntry.bswModuleEntry, implementedEntry.variationPoint.shortLabel vh.latestBindingTime=preCompileTime</p>
internalBehavior	BswInternalBehavior	*	aggr	<p>The various BswInternalBehaviors associated with a BswModuleDescription can be distributed over several physical files. Therefore the aggregation is &lt;&lt;atpSplitable&gt;&gt;.</p> <p><b>Stereotypes:</b> atpSplitable</p> <p><b>Tags:</b> atp.Splitkey=internalBehavior.shortName xml.sequenceOffset=65</p>
moduleId	PositiveInteger	0..1	attr	<p>Refers to the BSW Module Identifier defined by the AUTOSAR standard. For non-standardized modules, a proprietary identifier can be optionally chosen.</p> <p><b>Tags:</b>xml.sequenceOffset=5</p>
providedClientServerEntry	BswModuleClientServerEntry	*	aggr	<p>Specifies that this module provides a client server entry which can be called from another partition or core. This entry is declared locally to this context and will be connected to the requiredClientServerEntry of another or the same module via the configuration of the BSW Scheduler.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation</p> <p><b>Tags:</b> atp.Splitkey=providedClientServerEntry.shortName, providedClientServerEntry.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=45</p>
providedData	<a href="#">VariableDataPrototype</a>	*	aggr	<p>Specifies a data prototype provided by this module in order to be read from another partition or core. The providedData is declared locally to this context and will be connected to the requiredData of another or the same module via the configuration of the BSW Scheduler.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation</p> <p><b>Tags:</b> atp.Splitkey=providedData.shortName, providedData.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=55</p>

Class	BswModuleDescription			
providedMode Group	<a href="#">ModeDeclarationGroup Prototype</a>	*	aggr	<p>A set of modes which is owned and provided by this module or cluster. It can be connected to the required ModeGroups of other modules or clusters via the configuration of the BswScheduler. It can also be synchronized with modes provided via ports by an associated ServiceSwComponentType, EcuAbstraction SwComponentType or ComplexDeviceDriverSw ComponentType.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation  <b>Tags:</b>  atp.Splitkey=providedModeGroup.shortName, provided ModeGroup.variationPoint.shortLabel  vh.latestBindingTime=preCompileTime  xml.sequenceOffset=25</p>
releasedTrigger	Trigger	*	aggr	<p>A Trigger released by this module or cluster. It can be connected to the requiredTriggers of other modules or clusters via the configuration of the BswScheduler. It can also be synchronized with Triggers provided via ports by an associated ServiceSwComponentType, Ecu AbstractionSwComponentType or ComplexDeviceDriver SwComponentType.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation  <b>Tags:</b>  atp.Splitkey=releasedTrigger.shortName, released Trigger.variationPoint.shortLabel  vh.latestBindingTime=preCompileTime  xml.sequenceOffset=35</p>
requiredClient ServerEntry	BswModuleClientServer Entry	*	aggr	<p>Specifies that this module requires a client server entry which can be implemented on another partition or core. This entry is declared locally to this context and will be connected to the providedClientServerEntry of another or the same module via the configuration of the BSW Scheduler.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation  <b>Tags:</b>  atp.Splitkey=requiredClientServerEntry.shortName, requiredClientServerEntry.variationPoint.shortLabel  vh.latestBindingTime=preCompileTime  xml.sequenceOffset=50</p>
requiredData	<a href="#">VariableDataPrototype</a>	*	aggr	<p>Specifies a data prototype required by this module in order to be provided from another partition or core. The required Data is declared locally to this context and will be connected to the providedData of another or the same module via the configuration of the BswScheduler.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation  <b>Tags:</b>  atp.Splitkey=requiredData.shortName, required Data.variationPoint.shortLabel  vh.latestBindingTime=preCompileTime  xml.sequenceOffset=60</p>
requiredMode Group	<a href="#">ModeDeclarationGroup Prototype</a>	*	aggr	<p>Specifies that this module or cluster depends on a certain mode group. The requiredModeGroup is local to this context and will be connected to the providedModeGroup of another module or cluster via the configuration of the BswScheduler.</p>

Class	BswModuleDescription			
				<p style="text-align: right;">△</p> <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=requiredModeGroup.shortName, requiredModeGroup.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=30
requiredTrigger	Trigger	*	aggr	Specifies that this module or cluster reacts upon an external trigger. This requiredTrigger is declared locally to this context and will be connected to the providedTrigger of another module or cluster via the configuration of the BswScheduler.  <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=requiredTrigger.shortName, requiredTrigger.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=40

**Table A.9: BswModuleDescription**

Class	CompositionSwComponentType			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
<b>Note</b>	A CompositionSwComponentType aggregates SwComponentPrototypes (that in turn are typed by SwComponentTypes) as well as SwConnectors for primarily connecting SwComponentPrototypes among each others and towards the surface of the CompositionSwComponentType. By this means hierarchical structures of software-components can be created.  <b>Tags:</b> atp.recommendedPackage=SwComponentTypes			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a> , <a href="#">SwComponentType</a>			
Attribute	Type	Mult.	Kind	Note
component	<a href="#">SwComponentPrototype</a>	*	aggr	The instantiated components that are part of this composition. The aggregation of SwComponentPrototype is subject to variability with the purpose to support the conditional existence of a SwComponentPrototype. Please be aware: if the conditional existence of SwComponentPrototypes is resolved post-build the deselected SwComponentPrototypes are still contained in the ECUs build but the instances are inactive in in that they are not scheduled by the RTE.  The aggregation is marked as atpSplitable in order to allow the addition of service components to the ECU extract during the ECU integration.  The use case for having 0 components owned by the CompositionSwComponentType could be to deliver an empty CompositionSwComponentType to e.g. a supplier for filling the internal structure.  <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=component.shortName, component.variationPoint.shortLabel vh.latestBindingTime=postBuild

Class	CompositionSwComponentType			
connector	SwConnector	*	aggr	<p>SwConnectors have the principal ability to establish a connection among PortPrototypes. They can have many roles in the context of a CompositionSwComponentType. Details are refined by subclasses.</p> <p>The aggregation of SwConnectors is subject to variability with the purpose to support variant data flow.</p> <p>The aggregation is marked as atpSplitable in order to allow the extension of the ECU extract with AssemblySw Connectors between ApplicationSwComponentTypes and ServiceSwComponentTypes during the ECU integration.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=connector.shortName, connector.variationPoint.shortLabel vh.latestBindingTime=postBuild</p>
constantValue Mapping	ConstantSpecification MappingSet	*	ref	<p>Reference to the ConstantSpecificationMapping to be applied for initValues of PPortComSpecs and RPortCom Spec.</p> <p><b>Stereotypes:</b> atpSplitable <b>Tags:</b>atp.Splitkey=constantValueMapping</p>
dataType Mapping	DataTypeMappingSet	*	ref	<p>Reference to the DataTypeMapping to be applied for the used ApplicationDataTypes in PortInterfaces.</p> <p>Background: when developing subsystems it may happen that ApplicationDataTypes are used on the surface of CompositionSwComponentTypes. In this case it would be reasonable to be able to also provide the intended mapping to the ImplementationDataTypes. However, this mapping shall be informal and not technically binding for the implementors mainly because the RTE generator is not concerned about the CompositionSwComponent Types.</p> <p>Rationale: if the mapping of ApplicationDataTypes on the delegated and inner PortPrototype matches then the mapping to ImplementationDataTypes is not impacting compatibility.</p> <p><b>Stereotypes:</b> atpSplitable <b>Tags:</b>atp.Splitkey=dataTypeMapping</p>
instantiation RTEEventProps	InstantiationRTEEvent Props	*	aggr	<p>This allows to define instantiation specific properties for RTE Events, in particular for instance specific scheduling.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=instantiationRTEEventProps.shortLabel, instantiationRTEEventProps.variationPoint.shortLabel vh.latestBindingTime=codeGenerationTime</p>

**Table A.10: CompositionSwComponentType**

Class	CompuMethod
Package	M2::MSR::AsamHdo::ComputationMethod

<b>Class</b>	<b>CompuMethod</b>			
<b>Note</b>	<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p> <p><b>Tags:</b>atp.recommendedPackage=CompuMethods</p>			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
compuInternalToPhys	Compu	0..1	aggr	<p>This specifies the computation from internal values to physical values.</p> <p><b>Tags:</b>xml.sequenceOffset=80</p>
compuPhysToInternal	Compu	0..1	aggr	<p>This represents the computation from physical values to the internal values.</p> <p><b>Tags:</b>xml.sequenceOffset=90</p>
displayFormat	DisplayFormatString	0..1	attr	<p>This property specifies, how the physical value shall be displayed e.g. in documents or measurement and calibration tools.</p> <p><b>Tags:</b>xml.sequenceOffset=20</p>
unit	<a href="#">Unit</a>	0..1	ref	<p>This is the physical unit of the Physical values for which the CompuMethod applies.</p> <p><b>Tags:</b>xml.sequenceOffset=30</p>

**Table A.11: CompuMethod**

<b>Class</b>	<b>DataConstr</b>			
<b>Package</b>	M2::MSR::AsamHdo::Constraints::GlobalConstraints			
<b>Note</b>	<p>This meta-class represents the ability to specify constraints on data.</p> <p><b>Tags:</b>atp.recommendedPackage=DataConstrs</p>			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataConstrRule	DataConstrRule	*	aggr	<p>This is one particular rule within the data constraints.</p> <p><b>Tags:</b> xml.roleElement=true xml.roleWrapperElement=true xml.sequenceOffset=30 xml.typeElement=false xml.typeWrapperElement=false</p>

**Table A.12: DataConstr**

<b>Class</b>	<b>DataInterface</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
<b>Note</b>	<p>The purpose of this meta-class is to act as an abstract base class for subclasses that share the semantics of being concerned about data (as opposed to e.g. operations).</p>			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">PortInterface</a> , <a href="#">Referrable</a>

**Table A.13: DataInterface**

<b>Class</b>	<b>DataPrototype</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
<b>Note</b>	Base class for prototypical roles of any data type.			
<b>Base</b>	<i>ARObject</i> , <i>AtpFeature</i> , <i>AtpPrototype</i> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">ApplicationCompositeElementDataPrototype</a> , <a href="#">AutosarDataPrototype</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
swDataDef Props	<a href="#">SwDataDefProps</a>	0..1	aggr	This property allows to specify data definition properties which apply on data prototype level.

**Table A.14: DataPrototype**

<b>Class</b>	<b>DiagnosticEventNeeds</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	Specifies the abstract needs on the configuration of the Diagnostic Event Manager for one diagnostic event. Its shortName can be regarded as a symbol identifying the diagnostic event from the viewpoint of the component or module which owns this element.  In case the diagnostic event specifies a production error, the shortName shall be the name of the production error.			
<b>Base</b>	<i>ARObject</i> , <i>DiagnosticCapabilityElement</i> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a> , <a href="#">ServiceNeeds</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
considerPto Status	Boolean	0..1	attr	PTO (Power Take Off) has an impact on the respective emission-related event (OBD). This information shall be provided by SW-C description in order to consider the PTO relevance e.g. for readiness (PID \$01) computation. For events with dtcKind set to 'nonEmissionRelatedDtc' this attribute is typically false.
deferringFid	<a href="#">FunctionInhibitionNeeds</a>	*	ref	This reference contains the link to a function identifier within the FiM which is used by the monitor before delivering a result.
diagEvent Debounce Algorithm	<a href="#">DiagEventDebounceAlgorithm</a>	0..1	aggr	Specifies the abstract need on the Debounce Algorithm applied by the Diagnostic Event Manager.
dtcKind	DtcKindEnum	0..1	attr	This attribute indicates the kind of the diagnostic monitor according to the SWS Diagnostic Event Manger.  This attribute applies for the UDS diagnostics use case.
obdDtcNumber	PositiveInteger	0..1	attr	This represents a reasonable Diagnostic Trouble Code. This allows to predefine the Diagnostic Trouble Code, e.g. if the a function developer has received a particular requirement from the OEM or from a standardization body.  This attribute applies for the OBD diagnostics use case.

Class	DiagnosticEventNeeds			
prestored FreezeFrame StoredInNvm	Boolean	0..1	attr	If the Event uses a prestored freeze-frame (using the operations PrestoreFreezeFrame and ClearPrestoredFreezeFrame of the service interface DiagnosticMonitor) this attribute indicates if the Event requires the data to be stored in non-volatile memory. TRUE = Dem shall store the prestored data in non-volatile memory, FALSE = Data can be lost at shutdown (not stored in Nvm).
reportBehavior	ReportBehaviorEnum	0..1	attr	This switch indicates whether or not the BSW module is allowed to report the related Events before Dem_Init().
udsDtcNumber	PositiveInteger	0..1	attr	This represents a reasonable Diagnostic Trouble Code. This allows to predefine the Diagnostic Trouble Code, e.g. if the a function developer has received a particular requirement from the OEM or from a standardization body.  This attribute applies for the UDS diagnostics use case.
usesMonitor Data	Boolean	0..1	attr	This attribute defines whether additional monitor data shall be added to the reporting of events.

**Table A.15: DiagnosticEventNeeds**

Class	EcuInstance			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	ECUInstances are used to define the ECUs used in the topology. The type of the ECU is defined by a reference to an ECU specified with the ECU resource description.  <b>Tags:</b> atp.recommendedPackage=EcuInstances			
Base	ARObject, CollectableElement, FibexElement, Identifiable, MultilanguageReferrable, PackageableElement, Referrable			
Attribute	Type	Mult.	Kind	Note
associatedCom IPduGroup	ISignalIPduGroup	*	ref	With this reference it is possible to identify which ISignalIPduGroups are applicable for which Communication Connector/ ECU.  Only top level ISignalIPduGroups shall be referenced by an EcuInstance. If an ISignalIPduGroup contains other ISignalIPduGroups than these contained ISignalIPduGroups shall not be referenced by the EcuInstance. Contained ISignalIPduGroups are associated to an Ecu Instance via the top level ISignalIPduGroup.
associated Consumed Provided ServiceInstance Group	ConsumedProvided ServiceInstanceGroup	*	ref	With this reference it is possible to identify which ConsumedProvidedServiceInstanceGroups are applicable for which ECUInstance.  <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild
associatedPdur IPduGroup	PdurIPduGroup	*	ref	With this reference it is possible to identify which Pdur IPdu Groups are applicable for which Communication Connector/ ECU.
clientIdRange	ClientIdRange	0..1	aggr	Restriction of the Client Identifier for this Ecu to an allowed range of numerical values. The Client Identifier of the transaction handle is generated by the client RTE for inter-Ecu Client/Server communication.
com Configuration GwTimeBase	TimeValue	0..1	attr	The period between successive calls to Com_Main FunctionRouteSignals of the AUTOSAR COM module in seconds.

<b>Class</b>	<b>EcuInstance</b>			
com ConfigurationRx TimeBase	TimeValue	0..1	attr	The period between successive calls to Com_Main FunctionRx of the AUTOSAR COM module in seconds.
com ConfigurationTx TimeBase	TimeValue	0..1	attr	The period between successive calls to Com_Main FunctionTx of the AUTOSAR COM module in seconds.
comEnable MDTForCyclic Transmission	Boolean	0..1	attr	Enables for the Com module of this EcuInstance the minimum delay time monitoring for cyclic and repeated transmissions (TransmissionModeTiming has cyclic Timing assigned or eventControlledTiming with numberOfRepetitions > 0).
commController	Communication Controller	1..*	aggr	CommunicationControllers of the ECU. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild
connector	Communication Connector	*	aggr	All channels controlled by a single controller. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild
dltConfig	DltConfig	0..1	aggr	Describes the Dlt configuration on this EcuInstance.
dolpConfig	DolpConfig	0..1	aggr	Dolp configuration on this EcuInstance. <b>Tags:</b> atp.Status=draft
ethSwitchPort Group Derivation	Boolean	0..1	attr	Defines whether the derivation of SwitchPortGroups based on VLAN and/or CouplingPort.pncMapping shall be performed for this EcuInstance. If not defined the derivation shall not be done.
partition	EcuPartition	*	aggr	Optional definition of Partitions within an Ecu.
pncPrepare SleepTimer	TimeValue	0..1	attr	Time in seconds the PNC state machine shall wait in PNC_PREPARE_SLEEP.
pnc Synchronous Wakeup	Boolean	0..1	attr	If this parameter is available and set to true then all available PNCs will be woken up as soon as a channel wakeup occurs. This is ensured by adding all PNCs to all channel wakeup sources during upstream mapping.
pnResetTime	TimeValue	0..1	attr	Specifies the runtime of the reset timer in seconds. This reset time is valid for the reset of PN requests in the EIRA and in the ERA.
sleepMode Supported	Boolean	1	attr	Specifies whether the ECU instance may be put to a "low power mode" <ul style="list-style-type: none"> <li>• true: sleep mode is supported</li> <li>• false: sleep mode is not supported</li> </ul> Note: This flag may only be set to "true" if the feature is supported by both hardware and basic software.
tcplplcmpProps	EthTcplplcmpProps	0..1	ref	EcuInstance specific ICMP (Internet Control Message Protocol) attributes
tcplpProps	EthTcplpProps	0..1	ref	EcuInstance specific Tcplp Stack attributes.
v2xSupported	V2xSupportEnum	0..1	attr	This attribute is used to control the existence of the V2X stack on the given EcuInstance.
wakeUpOver BusSupported	Boolean	1	attr	Driver support for wakeup over Bus.

**Table A.16: EcuInstance**

<b>Class</b>	<b>ISignal</b>			
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
<b>Note</b>	<p>Signal of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal is sent in different SignallPdus to multiple receivers.</p> <p>To support the RTE "signal fan-out" each SignallPdu contains ISignals. If the same System Signal is to be mapped into several SignallPdus there is one ISignal needed for each ISignalToIPduMapping.</p> <p>ISignals describe the Interface between the Precompile configured RTE and the potentially Postbuild configured Com Stack (see ECUC Parameter Mapping).</p> <p>In case of the SystemSignalGroup an ISignal shall be created for each SystemSignal contained in the SystemSignalGroup.</p> <p><b>Tags:</b>atp.recommendedPackage=ISignals</p>			
<b>Base</b>	ARObject, CollectableElement, FibexElement, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
data Transformation	DataTransformation	0..1	ref	<p>Optional reference to a DataTransformation which represents the transformer chain that is used to transform the data that shall be placed inside this ISignal.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=dataTransformation.dataTransformation, dataTransformation.variationPoint.shortLabel vh.latestBindingTime=codeGenerationTime</p>
dataTypePolicy	DataTypePolicyEnum	1	attr	<p>With the aggregation of SwDataDefProps an ISignal specifies how it is represented on the network. This representation follows a particular policy. Note that this causes some redundancy which is intended and can be used to support flexible development methodology as well as subsequent integrity checks.</p> <p>If the policy "networkRepresentationFromComSpec" is chosen the network representation from the ComSpec that is aggregated by the PortPrototype shall be used. If the "override" policy is chosen the requirements specified in the PortInterface and in the ComSpec are not fulfilled by the networkRepresentationProps. In case the System Description doesn't use a complete Software Component Description (VFB View) the "legacy" policy can be chosen.</p>
initValue	<a href="#">ValueSpecification</a>	0..1	aggr	<p>Optional definition of a ISignal's initValue in case the System Description doesn't use a complete Software Component Description (VFB View). This supports the inclusion of legacy system signals.</p> <p>This value can be used to configure the Signal's "Init Value".</p> <p>If a full DataMapping exist for the SystemSignal this information may be available from a configured Sender ComSpec and ReceiverComSpec. In this case the initvalues in SenderComSpec and/or ReceiverComSpec override this optional value specification. Further restrictions apply from the RTE specification.</p>
iSignalProps	ISignalProps	0..1	aggr	<p>Additional optional ISignal properties that may be stored in different files.</p> <p><b>Stereotypes:</b> atpSplitable <b>Tags:</b>atp.Splitkey=iSignalProps</p>
iSignalType	ISignalTypeEnum	0..1	attr	<p>This attribute defines whether this iSignal is an array that results in a UINT8_N / UINT8_DYN ComSignalType in the COM configuration or a primitive type.</p>

Class	ISignal			
length	Integer	1	attr	Size of the signal in bits. The size needs to be derived from the mapped VariableDataPrototype according to the mapping of primitive DataTypes to BaseTypes as used in the RTE. Indicates maximum size for dynamic length signals.  The ISignal length of zero bits is allowed.
network Representation Props	SwDataDefProps	0..1	aggr	Specification of the actual network representation. The usage of SwDataDefProps for this purpose is restricted to the attributes compuMethod and baseType. The optional baseType attributes "memAllignment" and "byteOrder" shall not be used.  The attribute "dataTypePolicy" in the SystemTemplate element defines whether this network representation shall be ignored and the information shall be taken over from the network representation of the ComSpec.  If "override" is chosen by the system integrator the network representation can violate against the requirements defined in the PortInterface and in the network representation of the ComSpec.  In case that the System Description doesn't use a complete Software Component Description (VFB View) this element is used to configure "ComSignalDataInvalid Value" and the Data Semantics.
systemSignal	SystemSignal	1	ref	Reference to the System Signal that is supposed to be transmitted in the ISignal.
timeout Substitution Value	ValueSpecification	0..1	aggr	Defines and enables the ComTimeoutSubstitution for this ISignal.
transformation ISignalProps	TransformationISignal Props	*	aggr	A transformer chain consists of an ordered list of transformers. The ISignal specific configuration properties for each transformer are defined in the TransformationISignalProps class. The transformer configuration properties that are common for all ISignals are described in the TransformationTechnology class.

**Table A.17: ISignal**

Class	ISignalIPduGroup			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The AUTOSAR COM Layer is able to start and to stop sending and receiving configurable groups of I-Pdus during runtime. An ISignalIPduGroup contains either ISignalIPdus or ISignalIPduGroups.  <b>Tags:</b> atp.recommendedPackage=ISignalIPduGroup			
Base	ARObject, CollectableElement, FibexElement, Identifiable, MultilanguageReferrable, Packageable Element, Referrable			
Attribute	Type	Mult.	Kind	Note
communication Direction	Communication DirectionType	1	attr	This attribute determines in which direction IPdus that are contained in this IPduGroup will be transmitted (communication direction can be either In or Out).
communication Mode	String	1	attr	This attribute defines the use-case for this ISignalIPdu Group (e.g. diagnostic, debugging etc.). For example, in a diagnostic mode all IPdus - which are not involved in diagnostic - are disabled. The use cases are not limited to a fixed enumeration and can be specified as a string.

Class	ISignalPduGroup			
contained ISignalPdu Group	<a href="#">ISignalPduGroup</a>	*	ref	An I-Pdu group can be included in other I-Pdu groups. Contained I-Pdu groups shall not be referenced by the EcuInstance.
iSignalPdu	ISignalPdu	*	ref	Reference to a set of Signal I-Pdus, which are contained in the ISignal I-Pdu Group.  atpVariation: The content of a ISignal I-Pdu group can vary (->vehicle modes).  <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild
nmPdu	NmPdu	*	ref	Reference to a set of NmPdus with NmUserData, which are contained in the ISignalPduGroup.  <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=postBuild

**Table A.18: ISignalPduGroup**

<b>Class</b>	<b>IdentCaption</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::RPTScenario			
<b>Note</b>	This meta-class represents the caption. This allows having some meta classes optionally identifiable.

<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
adminData	AdminData	0..1	aggr	<p>This represents the administrative data for the identifiable object.</p> <p><b>Tags:</b>xml.sequenceOffset=-40</p>
annotation	Annotation	*	aggr	<p>Possibility to provide additional notes while defining a model element (e.g. the ECU Configuration Parameter Values). These are not intended as documentation but are mere design notes.</p> <p><b>Tags:</b>xml.sequenceOffset=-25</p>
category	CategoryString	0..1	attr	<p>The category is a keyword that specializes the semantics of the Identifiable. It affects the expected existence of attributes and the applicability of constraints.</p> <p><b>Tags:</b>xml.sequenceOffset=-50</p>
desc	<a href="#">MultiLanguageOverviewParagraph</a>	0..1	aggr	<p>This represents a general but brief (one paragraph) description what the object in question is about. It is only one paragraph! Desc is intended to be collected into overview tables. This property helps a human reader to identify the object in question.</p> <p>More elaborate documentation, (in particular how the object is built or used) should go to "introduction".</p> <p><b>Tags:</b>xml.sequenceOffset=-60</p>
introduction	<a href="#">DocumentationBlock</a>	0..1	aggr	<p>This represents more information about how the object in question is built or is used. Therefore it is a DocumentationBlock.</p> <p><b>Tags:</b>xml.sequenceOffset=-30</p>
uuid	String	0..1	attr	<p>The purpose of this attribute is to provide a globally unique identifier for an instance of a meta-class. The values of this attribute should be globally unique strings prefixed by the type of identifier. For example, to include a DCE UUID as defined by The Open Group, the UUID would be preceded by "DCE:". The values of this attribute</p>

<b>Class</b>	<b>Identifiable</b> (abstract)			
				<p style="text-align: center;">△</p> <p>may be used to support merging of different AUTOSAR models. The form of the UUID (Universally Unique Identifier) is taken from a standard defined by the Open Group (was Open Software Foundation). This standard is widely used, including by Microsoft for COM (GUIDs) and by many companies for DCE, which is based on CORBA. The method for generating these 128-bit IDs is published in the standard and the effectiveness and uniqueness of the IDs is not in practice disputed. If the id namespace is omitted, DCE is assumed. An example is "DCE:2fac1234-31f8-11b4-a222-08002b34c003". The uuid attribute has no semantic meaning for an AUTOSAR model and there is no requirement for AUTOSAR tools to manage the timestamp.</p> <p><b>Tags:</b>xml.attribute=true</p>

**Table A.20: Identifiable**

<b>Class</b>	<b>InternalBehavior</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::InternalBehavior			
<b>Note</b>	Common base class (abstract) for the internal behavior of both software components and basic software modules/clusters.			
<b>Base</b>	ARObject, AtpClassifier, AtpFeature, AtpStructureElement, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	BswInternalBehavior, SwcInternalBehavior			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
constant Memory	ParameterData Prototype	*	aggr	<p>Describes a read only memory object containing characteristic value(s) implemented by this Internal Behavior.</p> <p>The shortName of ParameterDataPrototype has to be equal to the 'C' identifier of the described constant.</p> <p>The characteristic value(s) might be shared between Sw ComponentPrototypes of the same SwComponentType.</p> <p>The aggregation of constantMemory is subject to variability with the purpose to support variability in the software component or module implementations. Typically different algorithms in the implementation are requiring different number of memory objects.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=constantMemory.shortName, constantMemory.variationPoint.shortLabel vh.latestBindingTime=preCompileTime</p>
constantValue Mapping	ConstantSpecification MappingSet	*	ref	<p>Reference to the ConstanSpecificationMapping to be applied for the particular InternalBehavior</p> <p><b>Stereotypes:</b> atpSplitable <b>Tags:</b>atp.Splitkey=constantValueMapping</p>
dataType Mapping	DataTypeMappingSet	*	ref	<p>Reference to the DataTypeMapping to be applied for the particular InternalBehavior</p> <p><b>Stereotypes:</b> atpSplitable <b>Tags:</b>atp.Splitkey=dataTypeMapping</p>

Class	InternalBehavior (abstract)			
exclusiveArea	ExclusiveArea	*	aggr	<p>This specifies an ExclusiveArea for this InternalBehavior. The exclusiveArea is local to the component resp. module. The aggregation of ExclusiveAreas is subject to variability. Note: the number of ExclusiveAreas might vary due to the conditional existence of RunnableEntities or BswModuleEntities.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=exclusiveArea.shortName, exclusiveArea.variationPoint.shortLabel vh.latestBindingTime=preCompileTime</p>
exclusiveAreaNestingOrder	ExclusiveAreaNestingOrder	*	aggr	<p>This represents the set of ExclusiveAreaNestingOrder owned by the InternalBehavior.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=exclusiveAreaNestingOrder.shortName, exclusiveAreaNestingOrder.variationPoint.shortLabel vh.latestBindingTime=preCompileTime</p>
staticMemory	<a href="#">VariableDataPrototype</a>	*	aggr	<p>Describes a read and writeable static memory object representing measurement variables implemented by this software component. The term "static" is used in the meaning of "non-temporary" and does not necessarily specify a linker encapsulation. This kind of memory is only supported if supportsMultipleInstantiation is FALSE.</p> <p>The shortName of the VariableDataPrototype has to be equal with the "C" identifier of the described variable.</p> <p>The aggregation of staticMemory is subject to variability with the purpose to support variability in the software component's implementations.</p> <p>Typically different algorithms in the implementation are requiring different number of memory objects.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=staticMemory.shortName, staticMemory.variationPoint.shortLabel vh.latestBindingTime=preCompileTime</p>

**Table A.21: InternalBehavior**

<b>Class</b>	<<atpVariation>> <b>J1939Cluster</b>			
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
<b>Note</b>	<p>J1939 specific cluster attributes.</p> <p><b>Tags:</b>atp.recommendedPackage=CommunicationClusters</p>			
<b>Base</b>	<p><i>ARObject</i>, <i>AbstractCanCluster</i>, <i>CollectableElement</i>, <a href="#">CommunicationCluster</a>, <i>FibexElement</i>, <i>Identifiable</i>, <a href="#">MultilanguageReferrable</a>, <i>PackageableElement</i>, <a href="#">Referrable</a></p>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
networkId	PositiveInteger	0..1	attr	This represents the network ID for the J1939 cluster.
request2Support	Boolean	0..1	attr	Enables support for the Request2 PGN (RQST2).

<b>Class</b>	<<atpVariation>> <b>J1939Cluster</b>			
usesAddress Arbitration	Boolean	0..1	attr	<p>Defines whether the nodes attached to this channel use an initial address claim, and whether they react to contending address claims of other nodes.</p> <p>True: The initial address claim is sent, and the node reacts to address claims of other nodes.</p> <p>False: The node only sends an address claim upon request, and does not care for contending address claims.</p>

**Table A.22: J1939Cluster**

<b>Class</b>	<b>J1939DcmIPdu</b>			
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
<b>Note</b>	<p>Represents the IPdus handled by J1939Dcm.</p> <p><b>Tags:</b>atp.recommendedPackage=Pdus</p>			
<b>Base</b>	ARObject, CollectableElement, FibexElement, IPdu, Identifiable, MultilanguageReferrable, PackageableElement, Pdu, Referrable			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
diagnostic MessageType	PositiveInteger	0..1	attr	This attribute is used to identify the actual DMx message, e.g 1 means DM01, etc.

**Table A.23: J1939DcmIPdu**

<b>Class</b>	<b>J1939NmNode</b>			
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
<b>Note</b>	J1939 specific NM Node attributes.			
<b>Base</b>	ARObject, Identifiable, MultilanguageReferrable, NmNode, Referrable			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
nodeName	J1939NodeName	0..1	aggr	nodeName configuration

**Table A.24: J1939NmNode**

<b>Class</b>	<b>ModeDeclaration</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ModeDeclaration			
<b>Note</b>	Declaration of one Mode. The name and semantics of a specific mode is not defined in the meta-model.			
<b>Base</b>	ARObject, AtpClassifier, AtpFeature, AtpStructureElement, Identifiable, MultilanguageReferrable, Referrable			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
value	PositiveInteger	0..1	attr	The RTE shall take the value of this attribute for generating the source code representation of this Mode Declaration.

**Table A.25: ModeDeclaration**

<b>Class</b>	<b>ModeDeclarationGroup</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ModeDeclaration			
<b>Note</b>	A collection of Mode Declarations. Also, the initial mode is explicitly identified. <b>Tags:</b> atp.recommendedPackage=ModeDeclarationGroups			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
initialMode	<a href="#">ModeDeclaration</a>	0..1	ref	The initial mode of the ModeDeclarationGroup. This mode is active before any mode switches occurred.
mode Declaration	<a href="#">ModeDeclaration</a>	*	aggr	The ModeDeclarations collected in this ModeDeclaration Group. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=blueprintDerivationTime
modeManager ErrorBehavior	ModeErrorBehavior	0..1	aggr	This represents the ability to define the error behavior expected by the mode manager in case of errors on the mode user side (e.g. terminated mode user).
modeTransition	ModeTransition	*	aggr	This represents the available ModeTransitions of the ModeDeclarationGroup
modeUserError Behavior	ModeErrorBehavior	0..1	aggr	This represents the definition of the error behavior expected by the mode user in case of errors on the mode manager side (e.g. terminated mode manager).
onTransition Value	PositiveInteger	0..1	attr	The value of this attribute shall be taken into account by the RTE generator for programmatically representing a value used for the transition between two statuses.

**Table A.26: ModeDeclarationGroup**

<b>Class</b>	<b>ModeDeclarationGroupPrototype</b>			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ModeDeclaration			
<b>Note</b>	The ModeDeclarationGroupPrototype specifies a set of Modes (ModeDeclarationGroup) which is provided or required in the given context.			
<b>Base</b>	<a href="#">ARObject</a> , <a href="#">AtpFeature</a> , <a href="#">AtpPrototype</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
swCalibration Access	SwCalibrationAccess Enum	0..1	attr	This allows for specifying whether or not the enclosing ModeDeclarationGroupPrototype can be measured at run-time.
type	<a href="#">ModeDeclarationGroup</a>	0..1	tref	The "collection of ModeDeclarations" (= ModeDeclaration Group) supported by a component <b>Stereotypes:</b> isOfType

**Table A.27: ModeDeclarationGroupPrototype**

<b>Class</b>	<b>ModelInBswModuleDescriptionInstanceRef</b>			
<b>Package</b>	M2::AUTOSARTemplates::BswModuleTemplate::BswOverview::InstanceRefs			
<b>Note</b>				
<b>Base</b>	<a href="#">ARObject</a> , <a href="#">AtpInstanceRef</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>

**Table A.28: ModelInBswModuleDescriptionInstanceRef**

<b>Primitive</b>	<b>NameToken</b>
<b>Package</b>	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::PrimitiveTypes
<b>Note</b>	This is an identifier as used in xml, e.g. xml-names. Basic difference to Identifier is the fact that it can contain "-". <b>Tags:</b> xml.xsd.customType=NMOKEN-STRING xml.xsd.type=NMOKEN

**Table A.29: NameToken**

<b>Class</b>	<b>NvDataInterface</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
<b>Note</b>	A non volatile data interface declares a number of VariableDataPrototypes to be exchanged between non volatile block components and atomic software components. <b>Tags:</b> atp.recommendedPackage=PortInterfaces			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">DataInterface</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">PortInterface</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
nvData	<a href="#">VariableDataPrototype</a>	*	aggr	The VariableDataPrototype of this nv data interface.

**Table A.30: NvDataInterface**

<b>Class</b>	<b>PPortPrototype</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Components			
<b>Note</b>	Component port providing a certain port interface.			
<b>Base</b>	<a href="#">ARObject</a> , <a href="#">AbstractProvidedPortPrototype</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpFeature</a> , <a href="#">AtpPrototype</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PortPrototype</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
provided Interface	<a href="#">PortInterface</a>	0..1	tref	The interface that this port provides. <b>Stereotypes:</b> isOfType

**Table A.31: PPortPrototype**

<b>Class</b>	<b>PortInterface</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
<b>Note</b>	Abstract base class for an interface that is either provided or required by a port of a software component.			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			

<b>Class</b>	<b>PortInterface</b> (abstract)			
<b>Subclasses</b>	ClientServerInterface, DataInterface, ModeSwitchInterface, TriggerInterface			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
isService	Boolean	0..1	attr	<p>This flag is set if the PortInterface is to be used for communication between an</p> <ul style="list-style-type: none"> <li>• ApplicationSwComponentType or</li> <li>• ServiceProxySwComponentType or</li> <li>• SensorActuatorSwComponentType or</li> <li>• ComplexDeviceDriverSwComponentType</li> <li>• ServiceSwComponentType</li> <li>• EcuAbstractionSwComponentType</li> </ul> <p>and a ServiceSwComponentType (namely an AUTOSAR Service) located on the same ECU. Otherwise the flag is not set.</p>
serviceKind	ServiceProviderEnum	0..1	attr	This attribute provides further details about the nature of the applied service.

**Table A.32: PortInterface**

<b>Class</b>	<b>PortPrototype</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Components			
<b>Note</b>	<p>Base class for the ports of an AUTOSAR software component.</p> <p>The aggregation of PortPrototypes is subject to variability with the purpose to support the conditional existence of ports.</p>			
<b>Base</b>	ARObject, AtpBlueprintable, AtpFeature, AtpPrototype, Identifiable, MultilanguageReferrable, Referrable			
<b>Subclasses</b>	AbstractProvidedPortPrototype, AbstractRequiredPortPrototype			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
clientServer Annotation	ClientServerAnnotation	*	aggr	Annotation of this PortPrototype with respect to client/server communication.
delegatedPort Annotation	DelegatedPort Annotation	0..1	aggr	Annotations on this delegated port.
ioHwAbstraction Server Annotation	IoHwAbstractionServer Annotation	*	aggr	Annotations on this IO Hardware Abstraction port.
modePort Annotation	ModePortAnnotation	*	aggr	Annotations on this mode port.
nvDataPort Annotation	NvDataPortAnnotation	*	aggr	Annotations on this non volatile data port.
parameterPort Annotation	ParameterPort Annotation	*	aggr	Annotations on this parameter port.
senderReceiver Annotation	SenderReceiver Annotation	*	aggr	Collection of annotations of this ports sender/receiver communication.
triggerPort Annotation	TriggerPortAnnotation	*	aggr	Annotations on this trigger port.

**Table A.33: PortPrototype**

<b>Class</b>	<b>Referrable</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::Identifiable			
<b>Note</b>	Instances of this class can be referred to by their identifier (while adhering to namespace borders).			
<b>Base</b>	ARObject			
<b>Subclasses</b>	AtpDefinition, BswDistinguishedPartition, BswModuleCallPoint, BswModuleClientServerEntry, BswVariableAccess, CouplingPortTrafficClassAssignment, <a href="#">DiagnosticDebounceAlgorithmProps</a> , <a href="#">DiagnosticEnvModeElement</a> , EthernetPriorityRegeneration, EventHandler, ExclusiveAreaNestingOrder, HwDescriptionEntity, ImplementationProps, LinSlaveConfigIdent, ModeTransition, <a href="#">MultilanguageReferrable</a> , PduActivationRoutingGroup, PncMappingIdent, <a href="#">SingleLanguageReferrable</a> , SoConIPdulIdentifier, SocketConnectionBundle, TimeSyncServerConfiguration, TpConnectionIdent			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
shortName	Identifier	1	attr	This specifies an identifying shortName for the object. It needs to be unique within its context and is intended for humans but even more for technical reference.  <b>Stereotypes:</b> atpIdentityContributor <b>Tags:</b> xml.enforceMinMultiplicity=true xml.sequenceOffset=-100
shortName Fragment	ShortNameFragment	*	aggr	This specifies how the Referrable.shortName is composed of several shortNameFragments.  <b>Tags:</b> xml.sequenceOffset=-90

**Table A.34: Referrable**

<b>Class</b>	<b>Sdg</b>			
<b>Package</b>	M2::MSR::AsamHdo::SpecialData			
<b>Note</b>	Sdg (SpecialDataGroup) is a generic model which can be used to keep arbitrary information which is not explicitly modeled in the meta-model.  Sdg can have various contents as defined by sdgContentsType. Special Data should only be used moderately since all elements should be defined in the meta-model.  Thereby SDG should be considered as a temporary solution when no explicit model is available. If an sdg Caption is available, it is possible to establish a reference to the sdg structure.			
<b>Base</b>	ARObject			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
gid	<a href="#">NameToken</a>	1	attr	This attributes specifies an identifier. Gid comes from the SGML/XML-Term "Generic Identifier" which is the element name in XML. The role of this attribute is the same as the name of an XML - element.  <b>Tags:</b> xml.attribute=true
sdgCaption	SdgCaption	0..1	aggr	This aggregation allows to assign the properties of Identifiable to the sdg. By this, a shortName etc. can be assigned to the Sdg.  <b>Tags:</b> xml.sequenceOffset=20
sdgContents Type	SdgContents	0..1	aggr	This is the content of the Sdg.  <b>Tags:</b> xml.roleElement=false xml.roleWrapperElement=false xml.sequenceOffset=30 xml.typeElement=false xml.typeWrapperElement=false

**Table A.35: Sdg**

<b>Class</b>	<b>SenderReceiverInterface</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
<b>Note</b>	A sender/receiver interface declares a number of data elements to be sent and received. <b>Tags:</b> atp.recommendedPackage=PortInterfaces			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpType</a> , <a href="#">CollectableElement</a> , <a href="#">DataInterface</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">PortInterface</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dataElement	<a href="#">VariableDataPrototype</a>	*	aggr	The data elements of this SenderReceiverInterface.
invalidation Policy	InvalidationPolicy	*	aggr	InvalidationPolicy for a particular dataElement
metaDataItem Set	MetaDataItemSet	*	aggr	This aggregation defines fixed sets of meta-data items associated with dataElements of the enclosing Sender ReceiverInterface

**Table A.36: SenderReceiverInterface**

<b>Class</b>	<b>ServiceNeeds</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
<b>Note</b>	This expresses the abstract needs that a Software Component or Basic Software Module has on the configuration of an AUTOSAR Service to which it will be connected. "Abstract needs" means that the model abstracts from the Configuration Parameters of the underlying Basic Software.			
<b>Base</b>	<a href="#">ARObject</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Subclasses</b>	BswMgrNeeds, ComMgrUserNeeds, CryptoKeyManagementNeeds, CryptoServiceJobNeeds, CryptoServiceNeeds, <a href="#">DiagnosticCapabilityElement</a> , DltUserNeeds, <a href="#">DolpServiceNeeds</a> , EcuStateMgrUserNeeds, ErrorTracerNeeds, FunctionInhibitionAvailabilityNeeds, <a href="#">FunctionInhibitionNeeds</a> , GlobalSupervisionNeeds, HardwareTestNeeds, IdsMgrCustomTimestampNeeds, IdsMgrNeeds, IndicatorStatusNeeds, J1939DcmDm19Support, J1939RmIncomingRequestServiceNeeds, J1939RmOutgoingRequestServiceNeeds, NvBlockNeeds, SecureOnBoardCommunicationNeeds, SupervisedEntityCheckpointNeeds, SupervisedEntityNeeds, SyncTimeBaseMgrUserNeeds, V2xFacUserNeeds, V2xMUserNeeds, VendorSpecificServiceNeeds			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table A.37: ServiceNeeds**

<b>Class</b>	<b>SwBaseType</b>			
<b>Package</b>	M2::MSR::AsamHdo::BaseTypes			
<b>Note</b>	This meta-class represents a base type used within ECU software. <b>Tags:</b> atp.recommendedPackage=BaseTypes			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpBlueprint</a> , <a href="#">AtpBlueprintable</a> , <a href="#">BaseType</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
–	–	–	–	–

**Table A.38: SwBaseType**

<b>Class</b>	<b>SwComponentPrototype</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
<b>Note</b>	Role of a software component within a composition.			
<b>Base</b>	ARObject, AtpFeature, AtpPrototype, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
type	<a href="#">SwComponentType</a>	0..1	tref	Type of the instance. <b>Stereotypes:</b> isOfType

**Table A.39: SwComponentPrototype**

<b>Class</b>	<b>SwComponentType</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Components			
<b>Note</b>	Base class for AUTOSAR software components.			
<b>Base</b>	<a href="#">ARElement</a> , ARObject, AtpBlueprint, AtpBlueprintable, AtpClassifier, AtpType, CollectableElement, <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , PackageableElement, <a href="#">Referrable</a>			
<b>Subclasses</b>	<a href="#">AtomicSwComponentType</a> , <a href="#">CompositionSwComponentType</a> , ParameterSwComponentType			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
consistency Needs	ConsistencyNeeds	*	aggr	This represents the collection of ConsistencyNeeds owned by the enclosing SwComponentType. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=consistencyNeeds.shortName, consistencyNeeds.variationPoint.shortLabel vh.latestBindingTime=preCompileTime
port	<a href="#">PortPrototype</a>	*	aggr	The PortPrototypes through which this SwComponent Type can communicate.  The aggregation of PortPrototype is subject to variability with the purpose to support the conditional existence of PortPrototypes. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=port.shortName, port.variationPoint.shortLabel vh.latestBindingTime=preCompileTime
portGroup	PortGroup	*	aggr	A port group being part of this component. <b>Stereotypes:</b> atpVariation <b>Tags:</b> vh.latestBindingTime=preCompileTime
swComponent Documentation	SwComponent Documentation	0..1	aggr	This adds a documentation to the SwComponentType. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=swComponentDocumentation, swComponentDocumentation.variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=-10
unitGroup	UnitGroup	*	ref	This allows for the specification of which UnitGroups are relevant in the context of referencing SwComponentType.

**Table A.40: SwComponentType**

Class	System			
Package	M2::AUTOSARTemplates::SystemTemplate			
Note	<p>The top level element of the System Description. The System description defines five major elements: Topology, Software, Communication, Mapping and Mapping Constraints.</p> <p>The System element directly aggregates the elements describing the Software, Mapping and Mapping Constraints; it contains a reference to an ASAM FIBEX description specifying Communication and Topology.</p> <p><b>Tags:</b>atp.recommendedPackage=Systems</p>			
Base	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">AtpClassifier</a> , <a href="#">AtpFeature</a> , <a href="#">AtpStructureElement</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
Attribute	Type	Mult.	Kind	Note
clientId DefinitionSet	ClientIdDefinitionSet	*	ref	Set of Client Identifiers that are used for inter-ECU client-server communication in the System.
containerIPdu HeaderByte Order	ByteOrderEnum	0..1	attr	Defines the byteOrder of the header in ContainerIPdus.
ecuExtract Version	RevisionLabelString	0..1	attr	Version number of the Ecu Extract.
fibexElement	FibexElement	*	ref	<p>Reference to ASAM FIBEX elements specifying Communication and Topology.</p> <p>All Fibex Elements used within a System Description shall be referenced from the System Element.</p> <p>atpVariation: In order to describe a product-line, all Fibex Elements can be optional.</p> <p><b>Stereotypes:</b> atpVariation <b>Tags:</b>vh.latestBindingTime=postBuild</p>
interpolation Routine MappingSet	InterpolationRoutine MappingSet	*	ref	This reference identifies the InterpolationRoutineMapping Sets that are relevant in the context of the enclosing System.
j1939Shared AddressCluster	J1939SharedAddress Cluster	*	aggr	<p>Collection of J1939Clusters that share a common address space for the routing of messages.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=j1939SharedAddressCluster.shortName, j1939SharedAddressCluster.variationPoint.shortLabel vh.latestBindingTime=postBuild</p>
mapping	SystemMapping	*	aggr	<p>Aggregation of all mapping aspects (mapping of SW components to ECUs, mapping of data elements to signals, and mapping constraints).</p> <p>In order to support OEM / Tier 1 interaction and shared development for one common System this aggregation is atpSplitable and atpVariation. The content of System Mapping can be provided by several parties using different names for the SystemMapping.</p> <p>This element is not required when the System description is used for a network-only use-case.</p> <p><b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=mapping.shortName, mapping.variationPoint.shortLabel vh.latestBindingTime=postBuild</p>
pncVector Length	PositiveInteger	0..1	attr	Length of the partial networking request release information vector (in bytes).

Class	System			
pncVectorOffset	PositiveInteger	0..1	attr	Absolute offset (with respect to the NM-PDU) of the partial networking request release information vector that is defined in bytes as an index starting with 0.
rootSoftwareComposition	RootSwCompositionPrototype	0..1	aggr	Aggregation of the root software composition, containing all software components in the System in a hierarchical structure. This element is not required when the System description is used for a network-only use-case.  atpVariation: The RootSwCompositionPrototype can vary. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=rootSoftwareComposition.shortName, rootSoftwareComposition.variationPoint.shortLabel vh.latestBindingTime=systemDesignTime
swCluster	CpSoftwareCluster	*	ref	CP Software Clusters of this System <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=swCluster.cpSoftwareCluster, swCluster.variationPoint.shortLabel atp.Status=draft vh.latestBindingTime=systemDesignTime
systemDocumentation	Chapter	*	aggr	Possibility to provide additional documentation while defining the System. The System documentation can be composed of several chapters. <b>Stereotypes:</b> atpSplitable; atpVariation <b>Tags:</b> atp.Splitkey=systemDocumentation.shortName, systemDocumentation.variationPoint.shortLabel vh.latestBindingTime=systemDesignTime xml.sequenceOffset=-10
systemVersion	RevisionLabelString	1	attr	Version number of the System Description.

**Table A.41: System**

Class	SystemSignal			
<b>Package</b>	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
<b>Note</b>	The system signal represents the communication system's view of data exchanged between SW components which reside on different ECUs. The system signals allow to represent this communication in a flattened structure, with exactly one system signal defined for each data element prototype sent and received by connected SW component instances. <b>Tags:</b> atp.recommendedPackage=SystemSignals			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
dynamicLength	Boolean	1	attr	The length of dynamic length signals is variable in run-time. Only a maximum length of such a signal is specified in the configuration (attribute length in ISignal element).
physicalProps	<a href="#">SwDataDefProps</a>	0..1	aggr	Specification of the physical representation.

**Table A.42: SystemSignal**

<b>Class</b>	<b>Unit</b>			
<b>Package</b>	M2::MSR::AsamHdo::Units			
<b>Note</b>	<p>This is a physical measurement unit. All units that might be defined should stem from SI units. In order to convert one unit into another factor and offset are defined.</p> <p>For the calculation from SI-unit to the defined unit the factor (factorSiToUnit ) and the offset (offsetSiToUnit ) are applied as follows:</p> $x \{unit\} := y * \{siUnit\} * factorSiToUnit \{unit\} / \{siUnit\} + offsetSiToUnit \{unit\}$ <p>For the calculation from a unit to SI-unit the reciprocal of the factor (factorSiToUnit ) and the negation of the offset (offsetSiToUnit ) are applied.</p> $y \{siUnit\} := (x * \{unit\} - offsetSiToUnit \{unit\}) / (factorSiToUnit \{unit\} / \{siUnit\})$ <p><b>Tags:</b>atp.recommendedPackage=Units</p>			
<b>Base</b>	<a href="#">ARElement</a> , <a href="#">ARObject</a> , <a href="#">CollectableElement</a> , <a href="#">Identifiable</a> , <a href="#">MultilanguageReferrable</a> , <a href="#">PackageableElement</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
displayName	SingleLanguageUnit Names	0..1	aggr	This specifies how the unit shall be displayed in documents or in user interfaces of tools. The displayName corresponds to the Unit.Display in an ASAM MCD-2MC file. <b>Tags:</b> xml.sequenceOffset=20
factorSiToUnit	Float	0..1	attr	This is the factor for the conversion from SI Units to units. The inverse is used for conversion from units to SI Units. <b>Tags:</b> xml.sequenceOffset=30
offsetSiToUnit	Float	0..1	attr	This is the offset for the conversion from and to siUnits. <b>Tags:</b> xml.sequenceOffset=40
physical Dimension	PhysicalDimension	0..1	ref	This association represents the physical dimension to which the unit belongs to. Note that only values with units of the same physical dimensions might be converted. <b>Tags:</b> xml.sequenceOffset=50

**Table A.43: Unit**

<b>Class</b>	<b>ValueSpecification</b> (abstract)			
<b>Package</b>	M2::AUTOSARTemplates::CommonStructure::Constants			
<b>Note</b>	Base class for expressions leading to a value which can be used to initialize a data object.			
<b>Base</b>	<a href="#">ARObject</a>			
<b>Subclasses</b>	<a href="#">AbstractRuleBasedValueSpecification</a> , <a href="#">ApplicationValueSpecification</a> , <a href="#">CompositeValueSpecification</a> , <a href="#">ConstantReference</a> , <a href="#">NotAvailableValueSpecification</a> , <a href="#">NumericalValueSpecification</a> , <a href="#">ReferenceValueSpecification</a> , <a href="#">TextValueSpecification</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
shortLabel	Identifier	0..1	attr	This can be used to identify particular value specifications for human readers, for example elements of a record type.

**Table A.44: ValueSpecification**

<b>Class</b>	<b>VariableDataPrototype</b>			
<b>Package</b>	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
<b>Note</b>	<p>A VariableDataPrototype is used to contain values in an ECU application. This means that most likely a VariableDataPrototype allocates "static" memory on the ECU. In some cases optimization strategies might lead to a situation where the memory allocation can be avoided.</p> <p>In particular, the value of a VariableDataPrototype is likely to change as the ECU on which it is used executes.</p>			
<b>Base</b>	ARObject, AtpFeature, AtpPrototype, AutosarDataPrototype, <a href="#">DataPrototype</a> , <a href="#">Identifiable</a> , <a href="#">Multilanguage</a> , <a href="#">Referrable</a> , <a href="#">Referrable</a>			
<b>Attribute</b>	<b>Type</b>	<b>Mult.</b>	<b>Kind</b>	<b>Note</b>
initValue	<a href="#">ValueSpecification</a>	0..1	aggr	Specifies initial value(s) of the VariableDataPrototype

**Table A.45: VariableDataPrototype**

## B History of Constraints and Specification Items

### B.1 Constraint History of this Document according to AUTOSAR R4.2.1

#### B.1.1 Added Specification Items in R4.2.1

Number	Heading
[TPS_DEXT_01000]	AUTOSAR diagnostics supports two kinds of data identifiers
[TPS_DEXT_01001]	Definition of a fixed-sized array
[TPS_DEXT_01002]	Definition of a variable-sized array
[TPS_DEXT_01003]	<a href="#">DiagnosticContributionSet</a> is the central part of the <a href="#">DiagnosticExtract</a>
[TPS_DEXT_01004]	<a href="#">DiagnosticContributionSet</a> defines the scope of the <a href="#">DiagnosticExtract</a>
[TPS_DEXT_01005]	<a href="#">DiagnosticContributionSet</a> can exist independently
[TPS_DEXT_01006]	The role of <a href="#">DiagnosticServiceTables</a> in the context of a <a href="#">DiagnosticContributionSet</a>
[TPS_DEXT_01007]	Common properties of a <a href="#">DiagnosticExtract</a>
[TPS_DEXT_01008]	<a href="#">DiagnosticContributionSet</a> defines the scope for the application of the common diagnostic properties
[TPS_DEXT_01009]	Limited support for the configuration of custom diagnostic services
[TPS_DEXT_01010]	Configuration of custom diagnostic services
[TPS_DEXT_01011]	Semantics of <a href="#">DiagnosticSession.id</a>
[TPS_DEXT_01012]	Rationale for the modeling of the multiplicity of <a href="#">DiagnosticAccessPermission.securityLevel</a>
[TPS_DEXT_01013]	Specification of sub-functions by means of attribute <a href="#">DiagnosticServiceInstance.category</a>

Number	Heading
[TPS_DEXT_01014]	Possible values of the <code>category</code> attribute for diagnostic services
[TPS_DEXT_01015]	Meaning of attributes of <code>DiagnosticIOControl</code>
[TPS_DEXT_01016]	The capability <code>returnControlToEcu</code>
[TPS_DEXT_01017]	Meaning of <code>DiagnosticIOControl.dataIdentifier</code>
[TPS_DEXT_01018]	<code>InputOutput Control</code> does not define any sub-functions
[TPS_DEXT_01019]	Correspondence of <code>category</code> values to numerical values mentioned in the ISO 14229-1
[TPS_DEXT_01020]	Manufacturer-specific values for sub-functions of service <code>EcuReset</code>
[TPS_DEXT_01021]	Semantics of <code>DiagnosticEcuReset.customSubFunctionNumber</code>
[TPS_DEXT_01022]	<code>ClearDiagnosticInformation</code> does not define any sub-functions
[TPS_DEXT_01023]	<code>WriteMemoryByAddress</code> does not define any sub-functions
[TPS_DEXT_01024]	<code>ReadMemoryByAddress</code> does not define any sub-functions
[TPS_DEXT_01025]	<code>TransferExit</code> does not define any sub-functions
[TPS_DEXT_01026]	<code>DataTransfer</code> does not define any sub-functions
[TPS_DEXT_01027]	<code>RequestDownload</code> does not define any sub-functions
[TPS_DEXT_01028]	<code>RequestUpload</code> does not define any sub-functions
[TPS_DEXT_01029]	Correspondence of <code>category</code> values to numerical values mentioned in the ISO 14229-1
[TPS_DEXT_01030]	Manufacturer-specific values for sub-functions of service <code>CommunicationControl</code>
[TPS_DEXT_01031]	Semantics of <code>DiagnosticComControl.customSubFunctionNumber</code>
[TPS_DEXT_01032]	Impact of the <code>DiagnosticComControlClass</code> on the state management for <code>CommunicationClusters</code>
[TPS_DEXT_01033]	Semantics of triggers in the context of a <code>DiagnosticResponseOnEvent</code>
[TPS_DEXT_01034]	Sub-functions of the service <code>ReadDTCInformation</code>
[TPS_DEXT_01035]	Existence of <code>DiagnosticRoutine.stop</code> and <code>DiagnosticRoutine.requestResult</code>
[TPS_DEXT_01036]	Work-flow within the execution of the diagnostic service <code>SecurityAccess</code>
[TPS_DEXT_01037]	Semantics of <code>DiagnosticSecurityAccess.requestSeedId</code>
[TPS_DEXT_01038]	Motivation for making the reference <code>DiagnosticSecurityAccess.securityLevel&lt;&lt;atpSplitable&gt;&gt;</code>
[TPS_DEXT_01039]	Identification of the sub-function of <code>DiagnosticSessionControl</code>
[TPS_DEXT_01040]	Use case where the <code>DiagnosticExtract</code> refers to software-components
[TPS_DEXT_01041]	Semantics of attribute <code>DiagnosticServiceDataMapping.diagnosticDataElement</code>
[TPS_DEXT_01042]	Dem uses <code>DiagnosticServiceDataMapping</code>
[TPS_DEXT_01043]	Purpose of <code>DiagnosticServiceSwMapping</code>
[TPS_DEXT_01044]	<code>BswServiceDependency</code> needs to act as the target of a reference
[TPS_DEXT_01045]	Supported diagnostic services

Number	Heading
[TPS_DEXT_01046]	ECU configuration is not suitable to be exchanged between partners in an ECU development project
[TPS_DEXT_01047]	Differences in the development processes for diagnostics at automotive OEMs and ECU suppliers
[TPS_DEXT_01048]	Actual algorithm for the diagnostic event debouncing
[TPS_DEXT_01049]	Consistency of <a href="#">DiagnosticServiceSwMapping</a> with respect to routine IDs
[TPS_DEXT_01050]	Consistency of <a href="#">DiagnosticServiceSwMapping</a> with respect to data IDs
[TPS_DEXT_01051]	Consistency of <a href="#">DiagnosticServiceSwMapping</a> with respect to data IDs
[TPS_DEXT_01052]	Existence of attribute <a href="#">DiagnosticServiceInstance.accessPermission</a>
[TPS_DEXT_01053]	Existence of <a href="#">DiagnosticSecurityAccess.securityLevel</a>
[TPS_DEXT_01054]	Existence of <a href="#">DiagnosticDataByIdentifier.dataIdentifier</a>
[TPS_DEXT_01055]	Standardized values of <a href="#">DiagnosticContributionSet.category</a>
[TPS_DEXT_01056]	Applicable values for <a href="#">DiagnosticEcuReset.category</a>
[TPS_DEXT_01057]	Allowed values of <a href="#">DiagnosticComControl.category</a>
[TPS_DEXT_01058]	Standardized values for <a href="#">DiagnosticDynamicallyDefineDataIdentifier.category</a>
[TPS_DEXT_01059]	Applicable values for <a href="#">DiagnosticPeriodicRate.category</a>
[TPS_DEXT_01060]	Applicable values for <a href="#">DiagnosticReadDTCInformation.category</a>
[TPS_DEXT_01061]	Supported scenarios for the definition of <i>access permission</i>
[TPS_DEXT_01062]	Existence of <a href="#">DiagnosticServiceClass.accessPermissionValidity</a> in an incomplete model
[TPS_DEXT_01063]	Existence of <a href="#">DiagnosticServiceClass.accessPermissionValidity</a> in a complete model
[TPS_DEXT_01064]	Textually formulated content attached to <a href="#">DiagnosticTroubleCode</a>
[TPS_DEXT_01065]	Different approaches to provide semi-formal textual content attached to a <a href="#">DiagnosticTroubleCode</a>
[TPS_DEXT_01066]	Standardized values of <a href="#">DiagnosticTroubleCode.introduction.trace</a>
[TPS_DEXT_01067]	Textually formulated content attached to <a href="#">DiagnosticEvent</a>
[TPS_DEXT_01068]	Textual description with respect to the <a href="#">DiagnosticEvent</a>
[TPS_DEXT_01069]	Standardized values of <a href="#">DiagnosticEvent.introduction.structuredReq</a>
[TPS_DEXT_01070]	Description of textually semi-formal formulated pre- and post-conditions for the validity of <a href="#">DiagnosticAccessPermission</a>
[TPS_DEXT_01071]	Standardized values of <a href="#">DiagnosticAccessPermission.introduction.structuredReq</a>
[TPS_DEXT_01072]	Purpose of attribute <a href="#">DiagnosticDataIdentifier.representsVin</a>
[TPS_DEXT_01073]	Diagnostic properties that are specific to an individual <a href="#">EcuInstance</a>
[TPS_DEXT_01074]	Difference between the attributes <a href="#">DiagnosticComControl.specificChannel</a> and <a href="#">DiagnosticComControl.subNodeChannel</a>

Number	Heading
[TPS_DEXT_01075]	standardized values for the attribute <code>DiagnosticControlDTCSetting.category</code>
[TPS_DEXT_01076]	Identification of sub-functions of diagnostic service <code>ControlDTCSetting</code>
[TPS_DEXT_01077]	Modeling of <code>DiagnosticRoutine</code>
[TPS_DEXT_01078]	Not possible to use the attribute <code>category</code> for the identification of the sub-function of diagnostic service <code>RoutineControl</code>
[TPS_DEXT_01079]	Modeling of the arguments to a <code>DiagnosticRoutine</code>
[TPS_DEXT_01080]	<code>DiagnosticRoutine</code> needs to be started
[TPS_DEXT_01081]	Modeling of <code>DiagnosticSessionControl</code>
[TPS_DEXT_01082]	Existence of <code>DiagnosticSessionControl.diagnosticSession</code>
[TPS_DEXT_01083]	Semantics of a <code>DiagnosticEvent</code>
[TPS_DEXT_01084]	<code>DiagnosticEvent</code> can be connected to one or multiple indicators
[TPS_DEXT_01085]	Semantics of <code>DiagnosticConditionGroups</code>
[TPS_DEXT_01086]	Reference to <code>DiagnosticOperationCycle</code>
[TPS_DEXT_01087]	Semantics of <code>DiagnosticOperationCycle</code>
[TPS_DEXT_01088]	Semantics of <code>DiagnosticRoutine.id</code>
[TPS_DEXT_01089]	Definition of an <i>identifier</i> of a <code>DiagnosticIOControl</code>
[TPS_DEXT_01090]	Diagnostic service <code>RequestFileTransfer</code> does not define any sub-functions
[TPS_DEXT_03000]	ISO 14229-1 reserves values of <code>DiagnosticTroubleCodeGroup.groupNumber</code>
[TPS_DEXT_03001]	Different types of conditions
[TPS_DEXT_03002]	Two kind of mappings
[TPS_DEXT_03003]	Semantics of <code>DiagnosticEventToTroubleCodeUdsMapping</code>
[TPS_DEXT_03004]	<code>DiagnosticEvent</code> and <code>DiagnosticDebounceAlgorithmProps</code>
[TPS_DEXT_03005]	Existence of <code>DiagnosticEventToDebounceAlgorithmMapping</code>
[TPS_DEXT_03006]	Values of the individual <code>DiagnosticStorageConditions</code>
[TPS_DEXT_03007]	Semantics of <code>DiagnosticEventPortMapping</code>
[TPS_DEXT_03008]	Semantics of <code>DiagnosticExtendedDataRecord</code>
[TPS_DEXT_03009]	Semantics of <code>DiagnosticFreezeFrame</code>
[TPS_DEXT_03010]	Combination of <code>DiagnosticConditions</code> to <code>DiagnosticConditionGroups</code>
[TPS_DEXT_03011]	Clearing request for a <code>DiagnosticEvent</code>
[TPS_DEXT_03012]	Three kinds of DTCs
[TPS_DEXT_03013]	Common properties of a DTC
[TPS_DEXT_03014]	Semantics of <code>DiagnosticTroubleCodeGroup</code>
[TPS_DEXT_03015]	<code>EnableConditions</code> have to be put into a <code>DiagnosticEnableConditionGroup</code>

Number	Heading
[TPS_DEXT_03016]	StorageConditions have to be put into a DiagnosticStorageConditionGroup
[TPS_DEXT_03017]	Semantics of DiagnosticOperationCyclePortMapping
[TPS_DEXT_03018]	Semantics of DiagnosticEnableConditionPortMapping
[TPS_DEXT_03019]	Semantics of DiagnosticStorageConditionPortMapping
[TPS_DEXT_03020]	Semantics of DiagnosticDemProvidedDataMapping
[TPS_DEXT_03021]	Aging
[TPS_DEXT_03022]	Different kinds of DiagnosticIndicators

**Table B.1: Added Specification Items in 4.2.1**

### B.1.2 Added Constraints in R4.2.1

Number	Heading
[constr_1324]	Existence of attribute DiagnosticDataIdentifier.representsVin
[constr_1325]	Allowed attributes of SwDataDefProps for DiagnosticDataElement.swDataDefProps
[constr_1326]	Existence of a variable-sized array
[constr_1327]	Multiplicity of DiagnosticContributionSet.ecuInstance
[constr_1328]	Consistency of DiagnosticContributionSet.ecuInstance and DiagnosticServiceTable.ecuInstance
[constr_1329]	Existence of concrete sub-classes of DiagnosticServiceClass in the context created by a DiagnosticContributionSet
[constr_1330]	Custom service identifier shall not overlap with standardized service identifiers
[constr_1331]	Existence of DiagnosticEcuReset.customSubFunctionNumber
[constr_1332]	Value range for DiagnosticEcuReset.customSubFunctionNumber
[constr_1333]	Existence of DiagnosticMemoryIdentifier.memoryLowAddress and DiagnosticMemoryIdentifier.memoryHighAddress
[constr_1334]	Existence of DiagnosticComControl.customSubFunctionNumber
[constr_1335]	Possible values for DiagnosticComControl.customSubFunctionNumber
[constr_1336]	Applicable value range for DiagnosticComControlSpecificChannel.subnetNumber
[constr_1337]	Allowed value range for attribute DiagnosticComControlSubNodeChannel.subNodeNumber
[constr_1338]	Maximum number of aggregated DiagnosticReadDataByPeriodicIDClass.periodicRate
[constr_1339]	Existence of DiagnosticRoutine.start
[constr_1340]	Consistency of DiagnosticServiceSwMapping with respect to synchronously called DiagnosticRoutines
[constr_1341]	Consistency of DiagnosticServiceSwMapping with respect to asynchronously called DiagnosticRoutines

Number	Heading
[constr_1342]	Possible values for <code>DiagnosticSecurityAccess.requestSeedId</code>
[constr_1343]	Simultaneous existence of the attributes <code>DiagnosticServiceDataMapping.diagnosticDataElement</code> and <code>DiagnosticDataByIdentifier.dataIdentifier</code>
[constr_1344]	Condition for the identification of data types of attributes <code>DiagnosticServiceDataMapping.mappedDataElement</code> and <code>DiagnosticServiceDataMapping.diagnosticDataElement</code>
[constr_1345]	<code>DiagnosticDataElement</code> shall not (finally) be aggregated by a <code>DiagnosticRoutine</code>
[constr_1346]	Allowed values of <code>DiagnosticServiceSwMapping.serviceInstance</code>
[constr_1347]	Existence of attributes of <code>DiagnosticServiceSwMapping</code>
[constr_1349]	Value of <code>udsDtcValue</code> shall be unique
[constr_1350]	Value of <code>DiagnosticTroubleCodeGroup.groupNumber</code> shall be unique
[constr_1351]	Value of <code>DiagnosticTroubleCodeGroup.groupNumber</code>
[constr_1352]	Existence of <code>maxNumberFreezeFrameRecords</code> vs. <code>freezeFrame</code>
[constr_1353]	Applicability of [constr_1352]
[constr_1354]	Existence of attribute <code>DiagnosticTroubleCodeProps.freezeFrameContent</code>
[constr_1355]	Value of <code>recordNumber</code>
[constr_1356]	Value of <code>recordNumber</code> shall be unique
[constr_1357]	Value of <code>recordNumber</code>
[constr_1358]	Value of <code>recordNumber</code> shall be unique
[constr_1359]	Existence of attribute <code>DiagnosticDebounceAlgorithmProps.debounceCounterStorage</code>
[constr_1360]	Usage of <code>DiagEventDebounceMonitorInternal</code> is not supported in the context of <code>DiagnosticDebounceAlgorithmProps</code>
[constr_1361]	Number of <code>DiagnosticEventToEnableConditionGroupMapping</code> elements per <code>DiagnosticEvent</code>
[constr_1362]	Number of <code>DiagnosticEventToStorageConditionGroupMapping</code> elements per <code>DiagnosticEvent</code>
[constr_1365]	Multiplicity of <code>DiagnosticResponseOnEvent.event</code>
[constr_1366]	Event ID in the context of diagnostic service <code>ResponseOnEvent</code> shall be unique
[constr_1376]	Multiplicity of reference <code>DiagnosticTroubleCodeProps.memoryDestination</code>
[constr_1377]	Existence of reference <code>DiagnosticTroubleCodeProps.memoryDestination</code>
[constr_1378]	Value of <code>DiagnosticMemoryDestinationUserDefined.memoryId</code>
[constr_1379]	Existence of <code>DiagnosticMemoryDestinationPrimary</code>
[constr_1380]	Existence of <code>DiagnosticMemoryDestinationMirror</code>

**Table B.2: Added Constraints in R4.2.1**

none

### B.2.6 Deleted Constraints in R4.2.2

none

## B.3 Constraint History of this Document according to AUTOSAR R4.3.0

### B.3.1 Added Traceables in R4.3.0

Number	Heading
[TPS_DEXT_01091]	Relation between a <a href="#">DiagnosticServiceTable</a> and one or more <a href="#">DiagnosticConnections</a>
[TPS_DEXT_01092]	Semantics of <a href="#">DiagnosticParameterIdentifier</a>
[TPS_DEXT_01093]	Definition of legislative freeze frame for WWHH-OBD
[TPS_DEXT_01094]	Semantics of meta-class <a href="#">DiagnosticTroubleCodeUdsToTroubleCodeObdMapping</a>
[TPS_DEXT_01095]	Definition of “alias” diagnostic event for the creation of a Fim configuration in the diagnostic extract
[TPS_DEXT_01096]	Semantics of <a href="#">DiagnosticFunctionInhibitSource</a>
[TPS_DEXT_01097]	Standardized value of <a href="#">StructuredReq.category</a> for the modeling of <a href="#">DiagnosticFunctionInhibitSource</a>
[TPS_DEXT_01098]	Semantics of attribute <a href="#">DiagnosticFunctionInhibitSource.event</a>
[TPS_DEXT_01099]	Semantics of attribute <a href="#">DiagnosticFunctionInhibitSource.eventGroup</a>
[TPS_DEXT_01100]	Consequence of the existence of <a href="#">DiagnosticFimAliasEventMapping</a>
[TPS_DEXT_01101]	Consequence of the existence of <a href="#">DiagnosticFimAliasEventGroupMapping</a>
[TPS_DEXT_01102]	Semantics of <a href="#">DiagnosticFimFunctionMapping</a>
[TPS_DEXT_01103]	Semantics of meta-class <a href="#">DiagnosticJ1939SpnMapping</a>
[TPS_DEXT_01104]	Difference between <a href="#">DiagnosticJ1939FreezeFrame</a> and <a href="#">DiagnosticJ1939ExpandedFreezeFrame</a>
[TPS_DEXT_01105]	Relation of <a href="#">DiagnosticJ1939Spn</a> to <a href="#">DiagnosticJ1939FreezeFrame</a> and <a href="#">DiagnosticJ1939ExpandedFreezeFrame</a>
[TPS_DEXT_01106]	Relation of Controller Application to SPN
[TPS_DEXT_01107]	Definition of service-only DTC
[TPS_DEXT_01108]	Purpose of the <a href="#">DiagnosticJ1939SwMapping</a>
[TPS_DEXT_01110]	Standardized values of <a href="#">DiagnosticJumprGroup.category</a>
[TPS_DEXT_01111]	Legislative freeze frame for the OBD-II case
[TPS_DEXT_01112]	Definition of a diagnostic trouble code for the implementation of WWH-OBD
[TPS_DEXT_01113]	Evaluation of a <a href="#">DiagnosticEnvConditionFormula</a>
[TPS_DEXT_01114]	<a href="#">DiagnosticEnvConditionFormula</a> that has no parts
[TPS_DEXT_01115]	<a href="#">DiagnosticEnvConditionFormula</a> that has one part
[TPS_DEXT_01116]	<a href="#">DiagnosticEnvConditionFormula</a> that has more than one part
[TPS_DEXT_01117]	Semantics of <a href="#">DiagnosticEnvConditionFormula.nrcValue</a>
[TPS_DEXT_01118]	Semantics of <a href="#">DiagnosticEnvDataCondition</a>
[TPS_DEXT_01119]	Semantics of <a href="#">DiagnosticEnvModeCondition</a>

Number	Heading
[TPS_DEXT_01120]	Comparison of the value of a <a href="#">ModeDeclarationGroupPrototype</a> with a <a href="#">ModeDeclaration</a>
[TPS_DEXT_01121]	Semantics of <a href="#">DiagnosticFunctionIdentifier</a>
[TPS_DEXT_01122]	Indication whether a <a href="#">EcuInstance</a> supports OBD
[TPS_DEXT_01124]	Semantics of meta-class <a href="#">DiagnosticProtocol</a>
[TPS_DEXT_01125]	Support for diagnostic service <a href="#">RequestCurrentPowertrainDiagnosticData</a>
[TPS_DEXT_01126]	Support of OBD service <a href="#">RequestPowertrainFreezeFrameData</a>
[TPS_DEXT_01127]	Semantics of meta-class <a href="#">DiagnosticRequestEmissionRelatedDTC</a>
[TPS_DEXT_01128]	Semantics of meta-class <a href="#">DiagnosticClearResetEmissionRelatedInfo</a>
[TPS_DEXT_01129]	Support for OBD diagnostic service <a href="#">RequestOnBoardMonitoringTestResults</a>
[TPS_DEXT_01130]	Support of OBD diagnostic service <a href="#">RequestControlOfOnBoardDevice</a>
[TPS_DEXT_01131]	Support for OBD diagnostic service <a href="#">RequestVehicleInformation</a>
[TPS_DEXT_01132]	Support for OBD diagnostic service <a href="#">RequestEmissionRelatedDiagnosticTroubleCodesPermanentStatus</a>
[TPS_DEXT_01133]	Support for WWH-OBD within the diagnostic extract
[TPS_DEXT_01134]	Definition of a <a href="#">DiagnosticDataElement</a> used in the context of a DID obtained by sender-receiver communication
[TPS_DEXT_01135]	Definition of a <a href="#">DiagnosticDataElement</a> used in the context of a DID obtained by client/server communication
[TPS_DEXT_01136]	Definition of a <a href="#">DiagnosticDataElement</a> used in the context of a diagnostic routine
[TPS_DEXT_01137]	Applicability of <a href="#">DiagnosticDataIdentifier.didSize</a>
[TPS_DEXT_01138]	Applicability of <a href="#">DiagnosticDataIdentifier.supportInfoByte</a>
[TPS_DEXT_01139]	Semantics of the references from <a href="#">DiagnosticAccessPermission</a>

**Table B.4: Added Traceables in 4.3.0**

### B.3.2 Changed Traceables in R4.3.0

Number	Heading
[TPS_DEXT_01006]	The role of <a href="#">DiagnosticServiceTables</a>
[TPS_DEXT_01052]	Existence of attribute <a href="#">DiagnosticServiceInstance.accessPermission</a>
[TPS_DEXT_01060]	Applicable values for <a href="#">DiagnosticReadDTCInformation.category</a>
[TPS_DEXT_01074]	Difference between the attributes <a href="#">DiagnosticComControlClass.specificChannel</a> and <a href="#">DiagnosticComControlClass.subNodeChannel</a>
[TPS_DEXT_03003]	Semantics of <a href="#">DiagnosticEventToTroubleCodeUdsMapping</a>

**Table B.5: Changed Traceables in R4.3.0**

### B.3.3 Deleted Traceables in R4.3.0

Number	Heading
[TPS_DEXT_01058]	Standardized values for <a href="#">DiagnosticDynamicallyDefineDataIdentifier.category</a>
[TPS_DEXT_01059]	Applicable values for <a href="#">DiagnosticPeriodicRate.category</a>

**Table B.6: Deleted Traceables in R4.3.0**

### B.3.4 Added Constraints in R4.3.0

Number	Heading
[constr_1405]	Value of <a href="#">DiagnosticProtocol.serviceTable</a> vs. <a href="#">DiagnosticServiceTable.protocolKind</a>
[constr_1406]	<a href="#">DiagnosticServiceTable.diagnosticConnection</a> vs. <a href="#">DiagnosticProtocol.diagnosticConnection</a>
[constr_1411]	Existence of <a href="#">DiagnosticMemoryIdentifier.memoryHighAddressLabel</a> vs. <a href="#">DiagnosticMemoryIdentifier.memoryHighAddress</a>
[constr_1412]	Existence of <a href="#">DiagnosticMemoryIdentifier.memoryLowAddressLabel</a> vs. <a href="#">DiagnosticMemoryIdentifier.memoryLowAddress</a>
[constr_1419]	Value of <a href="#">DiagnosticSecurityLevel.accessDataRecordSize</a>
[constr_1421]	Consistency of <a href="#">DiagnosticDynamicallyDefineDataIdentifierClass.subfunction</a>
[constr_1435]	Debouncing in the presence of a <a href="#">DiagnosticEventPortMapping</a>
[constr_1447]	Restrictions for the value of <a href="#">DiagnosticParameterIdentifier.id</a>
[constr_1448]	Interval of <a href="#">DiagnosticParameterIdentifier.id</a>
[constr_1449]	PID shall only carry a fixed-length collection of data
[constr_1450]	Service mapping for ODB mode 0x01 for <a href="#">DiagnosticParameterIdentifier</a>
[constr_1451]	Service mapping for OBD mode 0x09 for <a href="#">DiagnosticInfoType</a>

Number	Heading
[constr_1356]	Value of <code>recordNumber</code> shall be unique
[constr_1358]	Value of <code>recordNumber</code> shall be unique

**Table B.14: Deleted Constraints in 4.3.1**

## B.5 Constraint History of this Document according to AUTOSAR R4.4.0

### B.5.1 Added Traceables in 4.4.0

Number	Heading
[TPS_DEXT_01141]	Definition of a collection of test results
[TPS_DEXT_01142]	Standardized values for <code>DiagnosticDemProvidedDataMapping.dataProvider</code>
[TPS_DEXT_01143]	Definition of a custom trigger for an extended data record
[TPS_DEXT_01144]	Definition of a custom trigger for a freeze frame
[TPS_DEXT_01145]	Semantics of meta-class <code>DiagnosticEventToTroubleCodeJ1939Mapping</code>
[TPS_DEXT_01146]	Support for service <code>ReadScalingDataByIdentifier</code> (0x24)

**Table B.15: Added Traceables in 4.4.0**

### B.5.2 Changed Traceables in 4.4.0

Number	Heading
[TPS_DEXT_01004]	<code>DiagnosticContributionSet</code> defines the scope of the <code>DiagnosticExtract</code>
[TPS_DEXT_01041]	Semantics of attribute <code>DiagnosticServiceDataMapping.diagnosticDataElement</code>
[TPS_DEXT_01055]	Standardized values of <code>DiagnosticContributionSet.category</code>
[TPS_DEXT_01079]	Modeling of the arguments to a <code>DiagnosticRoutine</code>
[TPS_DEXT_03011]	Clearing request for a <code>DiagnosticEvent</code>
[TPS_DEXT_03020]	Semantics of <code>DiagnosticDemProvidedDataMapping</code>

**Table B.16: Changed Traceables in 4.4.0**

### B.5.3 Deleted Traceables in 4.4.0

Number	Heading
[TPS_DEXT_01137]	Applicability of <code>DiagnosticDataIdentifier.didSize</code>

**Table B.17: Deleted Traceables in 4.4.0**

### B.5.4 Added Constraints in 4.4.0

Number	Heading
[constr_1552]	<code>DiagnosticDataIdentifier</code> referenced by <code>DiagnosticDataIdentifierSet</code>
[constr_1584]	<code>DiagnosticDataElement</code> shall not be used more than once in I/O Control instance

Number	Heading
[constr_1590]	<code>DiagnosticEvent</code> referenced in the role <code>masterEvent</code> or <code>slaveEvent</code>
[constr_1591]	<code>DiagnosticEvent</code> referenced as <code>slaveEvent</code> shall not be reported by diagnostic monitor
[constr_1612]	Reference from <code>DiagnosticRoutineControl</code> to <code>DiagnosticAccessPermission</code> has no meaning
[constr_1616]	Existence of attribute <code>DiagnosticExtendedDataRecord.customTrigger</code>
[constr_1617]	Existence of attribute <code>DiagnosticFreezeFrame.customTrigger</code>
[constr_1623]	Restriction on <code>DiagnosticReadScalingDataByIdentifier.dataIdentifier</code>
[constr_1624]	Existence of <code>DiagnosticDataElement.scalingInfoSize</code>
[constr_1633]	Existence of <code>DiagnosticResponseOnEvent.event</code> vs. <code>DiagnosticResponseOnEvent.responseOnEventAction</code>

**Table B.18: Added Constraints in 4.4.0**

### B.5.5 Changed Constraints in 4.4.0

Number	Heading
[constr_1325]	Allowed attributes of <code>SwDataDefProps</code> for <code>DiagnosticDataElement.swDataDefProps</code>
[constr_1328]	Consistency of <code>DiagnosticEcuInstanceProps.ecuInstance</code> and <code>DiagnosticServiceTable.ecuInstance</code>

**Table B.19: Changed Constraints in 4.4.0**

### B.5.6 Deleted Constraints in 4.4.0

Number	Heading
[constr_1471]	Existence of <code>DiagnosticDataIdentifier.didSize</code>
[constr_1515]	Reference from <code>DiagnosticRoutineControl</code> to <code>DiagnosticAccessPermission</code> has no meaning

**Table B.20: Deleted Constraints in 4.4.0**

## B.6 Constraint History of this Document according to AUTOSAR R19-11

### B.6.1 Added Traceables in 19-11

Number	Heading
[TPS_DEXT_01147]	Support for custom service instance
[TPS_DEXT_01148]	Standardized values of <a href="#">DiagnosticIumprGroup.category</a>
[TPS_DEXT_01149]	Standardized values of <a href="#">DiagnosticIumprDenominatorGroup.category</a>
[TPS_DEXT_01150]	Semantics of meta-class <a href="#">DiagnosticControlEnableMaskBit</a>

**Table B.21: Added Traceables in 19-11**

### B.6.2 Changed Traceables in 19-11

Number	Heading
[TPS_DEXT_01060]	Applicable values for <a href="#">DiagnosticReadDTCInformation.category</a>
[TPS_DEXT_01134]	Definition of a <a href="#">DiagnosticDataElement</a> used in the context of a DID obtained by sender-receiver communication
[TPS_DEXT_01135]	Definition of a <a href="#">DiagnosticDataElement</a> used in the context of a DID obtained by client/server communication
[TPS_DEXT_01136]	Definition of a <a href="#">DiagnosticDataElement</a> used in the context of a diagnostic routine

**Table B.22: Changed Traceables in 19-11**

### B.6.3 Deleted Traceables in 19-11

Number	Heading
[TPS_DEXT_01009]	Limited support for the configuration of custom diagnostic services
[TPS_DEXT_01010]	Configuration of custom diagnostic services
[TPS_DEXT_01110]	Standardized values of <a href="#">DiagnosticIumprGroup.category</a>

**Table B.23: Deleted Traceables in 19-11**

### B.6.4 Added Constraints in 19-11

Number	Heading
[constr_1711]	Restriction of applicability of attribute <a href="#">typeOfFreezeFrameRecordNumeration</a>
[constr_1721]	<a href="#">DiagnosticControlEnableMaskBit.bitNumber</a> shall be unique
[constr_1722]	Relation between reference <a href="#">DiagnosticIOControl.dataIdentifier</a> and attribute <a href="#">DiagnosticIOControl.controlEnableMaskBit</a>

Number	Heading
[constr_1725]	Applicability of attribute <code>DiagnosticMemoryDestination.dtcStatusAvailabilityMask</code>

**Table B.24: Added Constraints in 19-11**

### B.6.5 Changed Constraints in 19-11

Number	Heading
[constr_1344]	Condition for the identification of data types of attributes <code>DiagnosticServiceDataMapping.mappedDataElement</code>
[constr_1349]	Value of <code>udsDtcValue</code> shall be unique
[constr_1354]	Existence of attribute <code>DiagnosticTroubleCodeProps.snapshotRecordContent</code>
[constr_1459]	Existence of attributes of <code>DiagnosticTroubleCodeProps</code>

**Table B.25: Changed Constraints in 19-11**

### B.6.6 Deleted Constraints in 19-11

none

## B.7 Constraint History of this Document according to AUTOSAR R20-11

### B.7.1 Added Traceables in R20-11

Number	Heading
[TPS_DEXT_01151]	Semantics of attribute <code>DiagnosticEvent.associatedEventIdentification</code>
[TPS_DEXT_01152]	Semantics of meta-class <code>DiagnosticSecurityEventReportingModeMapping</code>
[TPS_DEXT_01153]	Semantics of meta-class <code>DiagnosticEventToSecurityEventMapping</code>

**Table B.26: Added Traceables in R20-11**

### B.7.2 Changed Traceables in R20-11

Number	Heading
[TPS_DEXT_01041]	Semantics of attribute <code>DiagnosticServiceDataMapping.diagnosticDataElement</code>

Number	Heading
[TPS_DEXT_01142]	Standardized values for <code>DiagnosticDemProvidedDataMapping.dataProvider</code>

**Table B.27: Changed Traceables in R20-11**

### B.7.3 Deleted Traceables in R20-11

Number	Heading
[TPS_DEXT_01052]	Existence of attribute <code>DiagnosticServiceInstance.accessPermission</code>
[TPS_DEXT_01061]	Supported scenarios for the definition of <i>access permission</i>
[TPS_DEXT_01062]	Existence of <code>DiagnosticServiceClass.accessPermissionValidity</code> in an incomplete model
[TPS_DEXT_01063]	Existence of <code>DiagnosticServiceClass.accessPermissionValidity</code> in a complete model
[TPS_DEXT_01076]	Identification of sub-functions of diagnostic service <code>ControlDTCSetting</code>

**Table B.28: Deleted Traceables in R20-11**

### B.7.4 Added Constraints in R20-11

Number	Heading
[constr_1745]	Indirect reference to <code>DiagnosticCommonElement</code>
[constr_1749]	Existence of <code>DiagnosticInfoType.dataElement</code>
[constr_1750]	Existence of attribute <code>DiagnosticParameterIdentifier.pidSize</code>
[constr_1752]	Existence of references owned by <code>DiagnosticEnableConditionPortMapping</code>
[constr_1753]	Existence of references owned by <code>DiagnosticStorageConditionPortMapping</code>
[constr_1756]	Existence of attributes <code>DiagnosticExtendedDataRecord.trigger</code> and <code>update</code>
[constr_1757]	Existence of attribute <code>DiagnosticTroubleCodeUds.udsDtcValue</code>
[constr_1758]	Existence of attribute <code>DiagnosticTroubleCodeObd.obdDTCValue</code>
[constr_1759]	Existence of references owned by <code>DiagnosticOperationCyclePortMapping</code>
[constr_1760]	Existence of <code>DiagnosticExtendedDataRecord.recordElement</code>
[constr_1761]	Existence of attribute <code>DiagnosticConnectedIndicator.healingCycle</code>

**Table B.30: Deleted Constraints in R20-11**

## C Glossary

**Artifact** This is a Work Product Definition that provides a description and definition for tangible work product types. Artifacts may be composed of other artifacts ([23]).

At a high level, an artifact is represented as a single conceptual file.

**AUTOSAR Tool** This is a software tool which supports one or more tasks defined as AUTOSAR tasks in the methodology. Depending on the supported tasks, an AUTOSAR tool can act as an authoring tool, a converter tool, a processor tool or as a combination of those (see separate definitions).

**AUTOSAR Authoring Tool** An AUTOSAR Tool used to create and modify AUTOSAR XML Descriptions. Example: System Description Editor.

**AUTOSAR Converter Tool** An AUTOSAR Tool used to create AUTOSAR XML files by converting information from other AUTOSAR XML files. Example: ECU Flattener

**AUTOSAR Definition** This is the definition of parameters which can have values. One could say that the parameter values are Instances of the definitions. But in the meta model hierarchy of AUTOSAR, definitions are also instances of the meta model and therefore considered as a description. Examples for AUTOSAR definitions are: `EcucParameterDef`, `PostBuildVariantCriterion`, `SwSystemconst`.

**AUTOSAR XML Description** In AUTOSAR this means "filled Template". In fact an AUTOSAR XML description is the XML representation of an AUTOSAR model.

The AUTOSAR XML description can consist of several files. Each individual file represents an AUTOSAR partial model and shall validate successfully against the AUTOSAR XML schema.

**AUTOSAR Meta-Model** This is an UML2.0 model that defines the language for describing AUTOSAR systems. The AUTOSAR meta-model is an UML representation of the AUTOSAR templates. UML2.0 class diagrams are used to describe the attributes and their interrelationships. Stereotypes, UML tags and OCL expressions (object constraint language) are used for defining specific semantics and constraints.

**AUTOSAR Meta-Model Tool** The AUTOSAR Meta-Model Tool is the tool that generates different views (class tables, list of constraints, diagrams, XML Schema etc.) on the AUTOSAR meta-model.

**AUTOSAR Model** This is a representation of an AUTOSAR product. The AUTOSAR model represents aspects suitable to the intended use according to the AUTOSAR methodology.

Strictly speaking, this is an instance of the AUTOSAR meta-model. The information contained in the AUTOSAR model can be anything that is representable according to the AUTOSAR meta-model.

**AUTOSAR Partial Model** In AUTOSAR, the possible partitioning of models is marked in the meta-model by `<<atpSplittable>>`. One partial model is represented in an AUTOSAR XML description by one file. The partial model does not need to fulfill all semantic constraints applicable to an AUTOSAR model.

**AUTOSAR Processor Tool** An AUTOSAR Tool used to create non-AUTOSAR files by processing information from AUTOSAR XML files. Example: RTE Generator

**AUTOSAR Specification Element** An AUTOSAR Specification Element is a named element that is part of an AUTOSAR specification. Examples: requirement, constraint, specification item, class or attribute in the meta model, methodology, deliverable, methodology activity, model element, bsw module etc.

**AUTOSAR Template** The term "Template" is used in AUTOSAR to describe the format different kinds of descriptions. The term template comes from the idea, that

AUTOSAR defines a kind of form which shall be filled out in order to describe a model. The filled form is then called the description.

In fact the AUTOSAR templates are now defined as a meta-model.

**AUTOSAR Validation Tool** A specialized `AUTOSAR Tool` which is able to check an AUTOSAR model against the rules defined by a profile.

**AUTOSAR XML Schema** This is a W3C XML schema that defines the language for exchanging AUTOSAR models. This Schema is derived from the AUTOSAR meta-model. The AUTOSAR XML Schema defines the AUTOSAR data exchange format.

**Blueprint** This is a model from which other models can be derived by copy and refinement. Note that in contrast to meta model resp. types, this process is *not* an instantiation.

**Instance** Generally this is a particular exemplar of a model or of a type.

**Life Cycle** Life Cycle is the course of development/evolutionary stages of a model element during its life time.

**Meta-Model** This defines the building blocks of a model. In that sense, a Meta-Model represents the language for building models.

**Meta-Data** This includes pertinent information about data, including information about the authorship, versioning, access-rights, timestamps etc.

**Model** A Model is an simplified representation of reality. The model represents the aspects suitable for an intended purpose.

**Partial Model** This is a part of a model which is intended to be persisted in one particular artifact.

**Pattern in GST** This is an approach to simplify the definition of the meta model by applying a model transformation. This transformation creates an enhanced model out of an annotated model.

**Profile Authoring Support Data** Data that is used for efficient authoring of a profile. E.g. list of referable constraints, meta-classes, meta-attributes or other reusable model assets (blueprints)

**Profile Authoring Tool** A specialized `AUTOSAR Tool` which focuses on the authoring of profiles for data exchange points. It e.g. provides support for the creation of profiles from scratch, modification of existing profiles or composition of existing profiles.

**Profile Compatibility Checker Tool** A specialized `AUTOSAR Tool` which focuses on checking the compatibility of profiles for data exchange. Note that this compatibility check includes manual compatibility checks by engineers and automated assistance using more formal algorithms.

**Profile Consistency Checker Tool** A specialized AUTOSAR Tool which focuses on checking the consistency of profiles.

**Property** A property is a structural feature of an object. As an example a “connector” has the properties “receive port” and “send port”

Properties are made variant by the `<<atpVariation>>`.

**Prototype** This is the implementation of a role of a type within the definition of another type. In other words a type may contain Prototypes that in turn are typed by "Types". Each one of these prototypes becomes an instance when this type is instantiated.

**Type** A type provides features that can appear in various roles of this type.

**Value** This is a particular value assigned to a “Definition”.

**Variability** Variability of a system is its quality to describe a set of variants. These variants are characterized by variant specific property settings and / or selections. As an example, such a system property selection manifests itself in a particular “receive port” for a connection.

This is implemented using the `<<atpVariation>>`.

**Variant** A system variant is a concrete realization of a system, so that all its properties have been set respectively selected. The software system has no variability anymore with respect to the binding time.

This is implemented using `EvaluatedVariantSet`.

**Variation Binding** A variant is the result of a variation binding process that resolves the variability of the system by assigning particular values/selections to all the system’s properties.

This is implemented by `VariationPoint`.

**Variation Binding Time** The variation binding time determines the step in the methodology at which the variability given by a set of variable properties is resolved.

This is implemented by `vh.LatestBindingtime` at the related properties.

**Variation Definition Time** The variation definition time determines the step in the methodology at which the variation points are defined.

**Variation Point** A variation point indicates that a property is subject to variation. Furthermore, it is associated with a condition and a binding time which define the system context for the selection / setting of a concrete variant.

This is implemented by `VariationPoint`.

## D Modeling of InstanceRef

### D.1 Introduction

The existence of so-called `InstanceRefs` is a direct consequence to the usage of the `type-prototype` pattern for modeling within AUTOSAR. When referencing a `prototype` it is also necessary to include a reference to the `prototypes` typed by their corresponding `types` that in turn aggregate further `prototypes` to set up the context.

In other words, `InstanceRefs` are representing **structured references** that, on the one hand, consist of references to context `prototypes` (indicated by a subsetting or redefinition of `atpContextElement`) and finally a reference to the applicable target `prototype` (indicated by a redefinition of `atpTarget`).

Note that it is not uncommon to have more than a single context in the modeling of particular `InstanceRefs`.

For the reader of specifications, the modeling of `InstanceRefs` manifests as a UML dependency stereotyped `<<instanceRef>>` drawn from one meta-class to another.

This is a simplified indication that the source of the dependency implements an `InstanceRef` to the meta-class at the target of the dependency. Again, in most cases this is everything a reader needs to understand in order to figure out the modeling.

The formal modeling of `InstanceRefs` is done by creating subclasses of the abstract meta-class `AtpInstanceRef`.

Wherever a more detailed understanding of the modeling is advised in the context of the specific chapter of this document, the modeling of a specific subclasses of `AtpInstanceRef` is explained directly in the context of the corresponding chapter.

In all other cases, a deeper understanding of the modeling of particular subclasses of `AtpInstanceRefs` can be obtained from reading this chapter.

Class tables included in this chapter are not fully filled out in the sense that most of the notes inside the class tables are missing.

The **primary** purpose of these class tables is to **provide information about the intended order** in which `InstanceRefs` are **serialized in M1 AUTOSAR models**.

In particular, the information about the order in serialized M1 models can be obtained from the value of the tag `xml.sequenceOffset` of each attribute of an `InstanceRef` meta-class.

For more information about the general concept of modeling `AtpInstanceRef` (e.g. the conceptual background of redefining or subsetting an association from a subclass of `AtpInstanceRef` to other meta-classes) please refer to [24].

## E Upstream Mapping

### E.1 Introduction

This chapter describes the mapping of the ECU Configuration parameters (M1 model) onto the meta-classes and attributes of the AUTOSAR upstream templates (System Template, SW Component Template and ECU Resource Template).

The relationships between upstream templates and ECU Configuration are described in order to answer typical questions like:

- How shall a supplier use the information in a System Description in order to fulfill the needs defined by the systems engineer?
- How is a tool vendor supposed to generate an ECU Configuration Description out of ECU Extract of System Description?

Please note that the tables contain the following columns:

**bsw module:** Name of BSW module

**bsw context:** Reference to parameter container

**bsw type:** Type of parameter

**bsw param:** Name of the BSW parameter

**bsw desc:** Description from the configuration document

**m2 template:** System Template, SW Component Template, ECU Resource Template

**m2 param:** Name of the upstream template parameter

**m2 description:** Description from the upstream template definition

**mapping rule:** Textual description on how to transform between M2 and BSW domains

**mapping type:**

- local: no mapping needed since parameter local to BSW
- partial: some data can be automatically mapped but not all
- full: all data can be automatically mapped

## E.2 Dcm

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsd	
BSW Parameter	BSW Type	
DcmDsdServiceTable	ECUC-PARAM-CONF-CONTAINER-DEF	
BSW Description		
<p>This container contains the configuration (DSD parameters) for a Service Identifier Table.</p> <p>Note: It is allowed to add OBD services to a DcmDsdServiceTable related to a UDS Protocol. But it is not allowed to add UDS services to a DcmDsdServiceTable related to an OBD Protocol.</p>		
Template Description		
This meta-class represents a model of a diagnostic service table, i.e. the UDS services applicable for a given ECU.		
M2 Parameter		
DiagnosticExtract::DiagnosticContribution::DiagnosticServiceTable		
Mapping Rule		Mapping Type
1:1 mapping		full
Mapping Status		ECUC Parameter ID
valid		[ECUC_Dcm_00732]

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsd/DcmDsdServiceTable/DcmDsdService	
BSW Parameter	BSW Type	
DcmDsdSidTabSecurityLevelRef	ECUC-REFERENCE-DEF	
BSW Description		
<p>Reference to a Security Level in which the service is allowed to be executed. Multiple references are allowed for a service. Please refer to ISO 14229-1, ISO 15031-5 and chapter "Verification of the Service Security Access levels."</p> <p>If there is no reference configured, no service security verification shall be performed.</p>		
Template Description		
This represents the associated DiagnosticSecurityLevels		
M2 Parameter		
DiagnosticExtract::Dcm::DiagnosticAccessPermission.securityLevel		
Mapping Rule		Mapping Type
1:1 mapping		full
Mapping Status		ECUC Parameter ID
valid		[ECUC_Dcm_00733]

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsd/DcmDsdServiceTable/DcmDsdService	
BSW Parameter	BSW Type	
DcmDsdSidTabServiceId	ECUC-INTEGER-PARAM-DEF	
BSW Description		
<p>Identifier of the service.</p> <p>The possible service identifiers are defined in ISO 14229-1 and ISO 15031-5.</p>		
Template Description		
This meta-class provides the ability to define common properties that are shared among all instances of sub-classes of DiagnosticServiceInstance.		

<b>M2 Parameter</b>	
DiagnosticExtract::Dcm::DiagnosticService::CommonService::DiagnosticServiceClass	
<b>Mapping Rule</b>	<b>Mapping Type</b>
Service identifiers of the used DiagnosticServiceClass	full
<b>Mapping Status</b>	<b>ECUC Parameter ID</b>
valid	[ECUC_Dcm_00735]

<b>BSW Module</b>	<b>BSW Context</b>	
Dcm	Dcm/DcmConfigSet/DcmDsd/DcmDsdServiceTable/DcmDsdService	
<b>BSW Parameter</b>		<b>BSW Type</b>
DcmDsdSidTabSessionLevelRef		ECUC-REFERENCE-DEF
<b>BSW Description</b>		
Reference to a Session Level in which the service is allowed to be executed. Multiple references are allowed for a service. Please refer to ISO 14229-1, ISO 15031-5 and chapter "Verification of the Diagnostic Session". If there is no reference configured, no diagnostic session verification shall be performed.		
<b>Template Description</b>		
This represents the associated DiagnosticSessions		
<b>M2 Parameter</b>		
DiagnosticExtract::Dcm::DiagnosticAccessPermission.diagnosticSession		
<b>Mapping Rule</b>		<b>Mapping Type</b>
1:1 mapping		full
<b>Mapping Status</b>		<b>ECUC Parameter ID</b>
valid		[ECUC_Dcm_00734]

<b>BSW Module</b>	<b>BSW Context</b>	
Dcm	Dcm/DcmConfigSet/DcmDsd/DcmDsdServiceTable/DcmDsdService	
<b>BSW Parameter</b>		<b>BSW Type</b>
DcmDsdSidTabSubfuncAvail		ECUC-BOOLEAN-PARAM-DEF
<b>BSW Description</b>		
Information about whether the service has subfunctions or not. This parameter is used for the handling of the "suppressPosRspMsgIndicationBit" as defined in ISO 14229-1, which can be used as a reference for the configuration. true - service has subfunctions, suppressPosRspMsgIndicationBit is available false - service has no subfunctions, suppressPosRspMsgIndicationBit is not available		
<b>Template Description</b>		
The category is a keyword that specializes the semantics of the Identifiable. It affects the expected existence of attributes and the applicability of constraints.		
<b>M2 Parameter</b>		
GenericStructure::GeneralTemplateClasses::Identifiable::Identifiable.category		
<b>Mapping Rule</b>		<b>Mapping Type</b>
Stanadardized sub-functions of diagnostic services are mainly identified by the category. There are further specific attributes in the meta-model that allow for handling custom subfunctions,		full
<b>Mapping Status</b>		<b>ECUC Parameter ID</b>
valid		[ECUC_Dcm_00737]

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsd/DcmDsdServiceTable/DcmDsdService/DcmDsdSubService	
BSW Parameter		BSW Type
DcmDsdSubServiceFnc		ECUC-FUNCTION-NAME-DEF
BSW Description		
<p>Callback function of the ECU Supplier specific component for the particular service. The function's prototype is as described for &lt;Module&gt;_&lt;DiagnosticService&gt;_&lt;SubService&gt;.</p> <p>If this parameter is not configured, the subservice is handled Dcm-internally.</p>		
Template Description		
This attribute shall be used to define a custom sub-function number if none of the standardized values of category shall be used.		
M2 Parameter		
DiagnosticExtract::Dcm::DiagnosticService::CommunicationControl::DiagnosticComControl. <a href="#">customSubFunctionNumber</a>		
Mapping Rule		Mapping Type
The existence of a custom subfunction number shall trigger the creation of a custom processor.		full
Mapping Status		ECUC Parameter ID
valid		[ECUC_Dcm_00942]

BSW Parameter		BSW Type
DcmDspTextTableMapping		ECUC-PARAM-CONF-CONTAINER-DEF
BSW Description		
The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists). In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.		

Template Description	
<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>	
M2 Parameter	
AsamHdo::ComputationMethod::CompuMethod

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspData/DcmDspExternalSRDataElementClass/DcmDataElementInstance	
BSW Parameter	BSW Type	
DcmDataElementInstanceRef	ECUC-INSTANCE-REFERENCE-DEF	
BSW Description		
Instance Reference to the primitive or array data which shall be read or written. Supported are VariableDataPrototypes in SenderReceiverInterfaces and NvDataInterfaces and ParameterDataPrototypes in ParameterInterfaces (read only). This reference is applicable if the AutosarDataPrototype is typed with a ApplicationPrimitiveDataType of category VALUE or BOOLEAN or ApplicationArrayDataType or if the AutosarDataPrototype is typed with a ImplementationDataType of category VALUE, ARRAY or TYPE_REFERENCE that in turn boils down to VALUE or ARRAY		
Template Description		
This represents the dataElement in the application software that is accessed for diagnostic purpose. This role is applicable on the classic platform.		
M2 Parameter		
DiagnosticExtract::ServiceMapping::DiagnosticServiceDataMapping.mappedDataElement		
Mapping Rule	Mapping Type	
DiagnosticServiceDataMapping maps to a primitive data.	full	
Mapping Status	ECUC Parameter ID	
valid	[ECUC_Dcm_00991]	

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspData/DcmDspExternalSRDataElementClass/DcmSubElementInDataElementInstance	
BSW Parameter	BSW Type	
DcmSubElementInDataElementInstanceRef	ECUC-INSTANCE-REFERENCE-DEF	
BSW Description		

Instance Reference to the primitive sub-element (at any level) of composite data in a port which shall be read. Supported are VariableDataPrototypes in SenderReceiverInterfaces and NvDataInterfaces and ParameterDataPrototypes in Parameter Interfaces (read only). This reference is applicable if the AutosarDataPrototype is typed with a ApplicationCompositeData Type.	
<b>Template Description</b>	
This represents the dataElement in the application software that is accessed for diagnostic purpose. This role is applicable on the classic platform.	
<b>M2 Parameter</b>	
DiagnosticExtract::ServiceMapping::DiagnosticServiceDataMapping. <a href="#">mappedDataElement</a>	
<b>Mapping Rule</b>	<b>Mapping Type</b>
DiagnosticServiceDataMapping maps to a primitive element within a composite data, where the AutosarDataPrototype is typed with a ApplicationCompositeDataType.	full
<b>Mapping Status</b>	<b>ECUC Parameter ID</b>
valid	[ECUC_Dcm_00990]

<b>BSW Module</b>	<b>BSW Context</b>

<b>BSW Parameter</b>	<b>BSW Type</b>
DcmSubElementInImplDataElementInstanceRef	ECUC-INSTANCE-REFERENCE-DEF
<b>BSW Description</b>	
Instance Reference to the primitive sub-element (at any level) of composite data in a port which shall be read. Supported are VariableDataPrototypes in SenderReceiverInterfaces and NvDataInterfaces and ParameterDataPrototypes in Parameter Interfaces (read only). This reference is applicable if the AutosarDataPrototype is typed with a ImplementationDataType of category STRUCTURE or ARRAY. Please note that in case of ARRAY the index attribute in the target reference has to be set to select a single array element.	
<b>Template Description</b>	
This represents the dataElement in the application software that is accessed for diagnostic purpose. This role is applicable on the classic platform.	
<b>M2 Parameter</b>	
DiagnosticExtract::ServiceMapping::DiagnosticServiceDataMapping. <a href="#">mappedDataElement</a>	
<b>Mapping Rule</b>	<b>Mapping Type</b>
DiagnosticServiceDataMapping maps to a primitive element within a composite data, where the AutosarDataPrototype is typed with a ApplicationCompositeDataType ImplementationDataType of category STRUCTURE or ARRAY.	full
<b>Mapping Status</b>	<b>ECUC Parameter ID</b>
valid	[ECUC_Dcm_00992]

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmDsp
BSW Parameter	BSW Type
DcmDspDid	ECUC-PARAM-CONF-CONTAINER-DEF
BSW Description	This container contains the configuration (parameters) of the DID.
Template Description	<p><b>DiagnosticDataIdentifier:</b> This meta-class represents the ability to model a diagnostic data identifier (DID) that is fully specified regarding the payload at configuration-time.</p> <p><b>DiagnosticDynamicDataIdentifier:</b> This meta-class represents the ability to define a diagnostic data identifier (DID) at run-time.</p>
M2 Parameter	DiagnosticExtract::CommonDiagnostics::DiagnosticDataIdentifier, DiagnosticExtract::CommonDiagnostics::DiagnosticDynamicDataIdentifier
Mapping Rule	Mapping Type
If the DiagnosticDataIdentifier is referenced by DiagnosticDataByIdentifier, DiagnosticIOControl, or DiagnosticReadDataByPeriodicID,DiagnosticDataChangeTrigger	full
Mapping Status	ECUC Parameter ID
valid	[ECUC_Dcm_00601]

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspDid
BSW Parameter	BSW Type

DcmDspDidIdentifier	ECUC-INTEGER-PARAM-DEF
<b>BSW Description</b>	
2 byte Identifier of the DID Within each DcmConfigSet all DcmDspDidIdentifier values shall be unique.	
<b>Template Description</b>	
<b>DiagnosticAbstractDataIdentifier.id:</b> This is the numerical identifier used to identify the DiagnosticAbstractDataIdentifier in the scope of diagnostic workflow	
<b>DiagnosticValueNeeds.didNumber:</b> This represents a Data identifier for the diagnostic value. This allows to predefine the DID number if the responsible function developer has received a particular requirement from the OEM or from a standardization body.	
<b>M2 Parameter</b>	
DiagnosticExtract::CommonDiagnostics::DiagnosticAbstractDataIdentifier.id, CommonStructure::ServiceNeeds::DiagnosticValueNeeds.didNumber

<b>BSW Parameter</b>	<b>BSW Type</b>
DcmDspDidByteOffset	ECUC-INTEGER-PARAM-DEF
<b>BSW Description</b>	
Defines the absolute byte offset of the data defined by DcmDspDidDataRef reference to DcmDspData container in the DID.	
<b>Template Description</b>	
This represents the bitOffset of the DiagnosticParameter	
<b>M2 Parameter</b>	
DiagnosticExtract::CommonDiagnostics::DiagnosticParameter.bitOffset	
<b>Mapping Rule</b>	<b>Mapping Type</b>
bitOffset / 8	full
<b>Mapping Status</b>	<b>ECUC Parameter ID</b>
valid	[ECUC_Dcm_01105]

<b>BSW Module</b>	<b>BSW Context</b>
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspDid
<b>BSW Parameter</b>	<b>BSW Type</b>
DcmDspDidSize	ECUC-INTEGER-PARAM-DEF
<b>BSW Description</b>	
Length of a DID in byte(s).	
<b>Template Description</b>	
This attribute indicates the size in bytes of the DiagnosticDataIdentifier.	
<b>M2 Parameter</b>	
DiagnosticExtract::CommonDiagnostics::DiagnosticDataIdentifier.didSize	
<b>Mapping Rule</b>	<b>Mapping Type</b>
1:1 mapping	full

Mapping Status	ECUC Parameter ID
valid	[ECUC_Dcm_01099]

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspDid
BSW Parameter	BSW Type
DcmDspDidSupportInfo	ECUC-PARAM-CONF-CONTAINER-DEF
BSW Description	This container defines the support information to declare the usability of the data bytes within the DIDs
Template Description	This attribute represents the supported information associated with the DiagnosticDataIdentifier.
M2 Parameter	DiagnosticExtract::CommonDiagnostics::DiagnosticDataIdentifier.supportInfoByte
Mapping Rule	Mapping Type
	full
Mapping Status	ECUC Parameter ID
valid	[ECUC_Dcm_01102]

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspDidInfo
BSW Parameter	BSW Type
DcmDspDDDIDMaxElements	ECUC-INTEGER-PARAM-DEF
BSW Description	Maximum number of source elements of a DDDID.
Template Description	This represents the maximum number of source elements of the dynamically created DID.
M2 Parameter	DiagnosticExtract::Dcm::DiagnosticService::DynamicallyDefineDataIdentifier::DiagnosticDynamicallyDefineDataIdentifier.maxSourceElement
Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	ECUC Parameter ID

<b>BSW Parameter</b>		<b>BSW Type</b>
DcmDspTextTableMapping		ECUC-PARAM-CONF-CONTAINER-DEF
<b>BSW Description</b>		

<p>The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.</p>	
<b>Template Description</b>	
<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>	
<b>M2 Parameter</b>	
AsamHdo::ComputationMethod::CompuMethod	
<b>Mapping Rule</b>	<b>Mapping Type</b>
This mapping applies if the CompuMethod.category is set to values TEXTTABLE or SCALE_LINEAR_AND_TEXTTABLE.	full

<b>BSW Parameter</b>	<b>BSW Type</b>
DcmDspTextTableMapping	ECUC-PARAM-CONF-CONTAINER-DEF
<b>BSW Description</b>	
<p>The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.</p>	
<b>Template Description</b>	
<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>	
<b>M2 Parameter</b>	
AsamHdo::ComputationMethod:: <a href="#">CompuMethod</a>	
<b>Mapping Rule</b>	<b>Mapping Type</b>

This mapping applies if the CompuMethod.category is set to values TEXTTABLE or SCALE_LINEAR_AND_TEXTTABLE.	full
<b>Mapping Status</b>	<b>ECUC Parameter ID</b>

BSW Parameter		BSW Type
DcmDspTextTableMapping		ECUC-PARAM-CONF-CONTAINER-DEF
BSW Description		
<p>The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.</p>		
Template Description		
<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>		
M2 Parameter		
AsamHdo::ComputationMethod::CompuMethod

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspRoutine
BSW Parameter	BSW Type
DcmDspRoutineUsePort	ECUC-BOOLEAN-PARAM-DEF
BSW Description	
<p>If this parameter is set to true, the DCM uses a port requiring a PortInterface RoutineServices_{RoutineName}.</p> <p>The R-Port is named RoutineServices_{RoutineName} where {RoutineName} is the name of the container DcmDspRoutine. In that case, the configuration must not provide function names in DcmDspStartRoutineFnc, DcmDspStopRoutineFnc or DcmDspRequestResultsRoutineFnc. If this is false, the DCM expects to find the names of the functions to be used in DcmDspStartRoutineFnc, DcmDspStopRoutineFnc or DcmDspRequestResultsRoutineFnc.</p>	
Template Description	
<p>This represents the ability to define a mapping of a diagnostic service to a software-component or a basic-software module. If the former is used then this kind of service mapping is applicable for the usage of ClientServerInterfaces.</p>	
M2 Parameter	
DiagnosticExtract::ServiceMapping::DiagnosticServiceSwMapping

BSW Parameter		BSW Type
DcmDspTextTableMapping		ECUC-PARAM-CONF-CONTAINER-DEF
BSW Description		
<p>The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.</p>		
Template Description		
<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>		
M2 Parameter		
AsamHdo::ComputationMethod::CompuMethod		
Mapping Rule		Mapping Type
This mapping applies if the CompuMethod.category is set to values TEXTTABLE or SCALE_LINEAR_AND_TEXTTABLE.		full

BSW Parameter	BSW Type	
DcmDspTextTableMapping	ECUC-PARAM-CONF-CONTAINER-DEF	
BSW Description		
The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists). In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.		
Template Description		
This meta-class represents the ability to express the relationship between a physical value and the mathematical representation. Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.		
M2 Parameter		
AsamHdo::ComputationMethod::CompuMethod

BSW Parameter	BSW Type	
DcmDspTextTableMapping	ECUC-PARAM-CONF-CONTAINER-DEF	
BSW Description		
<p>The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.</p>		
Template Description		

<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>	
<b>M2 Parameter</b>

<b>BSW Parameter</b>		<b>BSW Type</b>
DcmDspTextTableMapping		ECUC-PARAM-CONF-CONTAINER-DEF
<b>BSW Description</b>		

<p>The purpose of the DcmDspTextTableMapping is to associate a texttable value defined in the context of the Dcm to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DcmDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dcm ServiceComponent does not yet exist.</p>	
<b>Template Description</b>	
<p>This meta-class represents the ability to express the relationship between a physical value and the mathematical representation.</p> <p>Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant.</p>

Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspVehInfo/DcmDspVehInfoData
BSW Parameter	BSW Type
DcmDspVehInfoDataSize	ECUC-INTEGER-PARAM-DEF
BSW Description	
Size in bytes of the InfoType data item.	
Template Description	
The existence of this attribute turns the data instance into an array of data. The attribute determines the size of the array in terms of how many elements the array can take.	
M2 Parameter	
DiagnosticExtract::CommonDiagnostics::DiagnosticDataElement.maxNumberOfElements	
Mapping Rule	Mapping Type
Value shall be taken from DiagnosticRequestVehicleInfo.infoType.dataElement.dataElement.maxNumberOfElements.	full
Mapping Status	ECUC Parameter ID
valid	[ECUC_Dcm_00890]

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmDsp/DcmDspVehInfo/DcmDspVehInfoData
BSW Parameter	BSW Type
DcmDspVehInfoDataUsePort	ECUC-BOOLEAN-PARAM-DEF
BSW Description	
When this parameter is set to true the DCM will access the Data using an R-Port requiring a PortInterface Infotype Services_{VehInfoData}. The R-Port is named InfotypeServices_{VehInfoData} where {VEHINFODATA} is the name of the container DcmDspVehInfoData. In that case, the DcmDspVehInfoDataReadFnc is ignored and the RTE APIs are used. When this parameter is set to false, the DCM calls the function defined in DcmDspVehInfoDataReadFnc.	
Template Description	
<b>DiagnosticServiceSwMapping.mappedBswServiceDependency:</b> This is supposed to represent a reference to a BswServiceDependency. the latter is not derived from Referrable and therefore this detour needs to be implemented to still let BswServiceDependency become the target of a reference.	
<b>DiagnosticServiceSwMapping.mappedSwcServiceDependencyInSystem:</b> This represents the ability to point into the component hierarchy (under possible consideration of the rootSoftware Composition)	
M2 Parameter	
DiagnosticExtract::ServiceMapping::DiagnosticServiceSwMapping.mappedBswServiceDependency, Diagnostic Extract::ServiceMapping::DiagnosticServiceSwMapping.mappedSwcServiceDependencyInSystem	
Mapping Rule	Mapping Type

Shall be set to TRUE if the reference DiagnosticServiceSwMapping.mappedSwcService Dependency exists. Shall be set to FALSE if the reference DiagnosticServiceSwMapping.mapped BswServiceDependency exists.	full
<b>Mapping Status</b>	<b>ECUC Parameter ID</b>

BSW Module	BSW Context
Dcm	Dcm/DcmConfigSet/DcmProcessingConditions
BSW Parameter	BSW Type
DcmModeCondition	ECUC-PARAM-CONF-CONTAINER-DEF
BSW Description	
This container contains the configuration of a mode condition or an environmental conditions which can be used as argument in DcmModeRules. One DcmModeCondition shall contain either one DcmSwcModeRef or one DcmBswModeRef or one DcmSwcSRData ElementRef. Please note that the Dcm acts as well as mode manager. Therefore the references DcmSwcModeRef or one DcmBswMode Ref. might point to provided ModeDeclarationGroupPrototypes of the Dcm itself as well as to provided ModeDeclaration GroupPrototypes of other Bsw Modules or software components. In case of a configured DcmSwcModeRef or DcmBswModeRef only the DcmConditionType DCM_EQUALS or DCM_EQUALS_NOT are applicable. In case of DcmSwcSRDataElementRef all literals of DcmConditionType are possible.	
Template Description	
DiagnosticCompareConditions are atomic conditions. They are based on the idea of a comparison at runtime of some variable data with something constant. The type of the comparison (==, !=, <, <=, ...) is specified in DiagnosticCompare Condition.compareType.	
M2 Parameter	
DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition::DiagnosticEnvCompareCondition	
Mapping Rule	Mapping Type

Depending on the reference a DcmModeCondition is mapped to a DiagnosticEnvModeCondition if only one reference is present and reference is a DcmSwcModeRef or a DcmBswModeRef. If two references are present, a DcmSwcSRDataElementRef and a DcmSwcSRDataElementValueRef, then DcmModeCondition is mapped to a DiagnosticEnvDataCondition.	full

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmProcessingConditions	
BSW Parameter	BSW Type	
DcmModeRule	ECUC-PARAM-CONF-CONTAINER-DEF	
BSW Description		
This container contains the configuration of a mode rule which represents a logical expression with DcmModeConditions or other DcmModeRules as arguments. All arguments are processed with the operator defined by DcmLogicalOperator, for instance: Argument_A AND Argument_B AND Argument_C		

Template Description	
<p>A DiagnosticEnvConditionFormula embodies the computation instruction that is to be evaluated at runtime to determine if the DiagnosticEnvironmentalCondition is currently present (i.e. the formula is evaluated to true) or not (otherwise). The formula itself consists of parts which are combined by the logical operations specified by DiagnosticEnvConditionFormula.op.</p> <p>If a diagnostic functionality cannot be executed because an environmental condition fails then the diagnostic stack shall send a negative response code (NRC) back to the client. The value of the NRC is directly related to the specific formula and is therefore formalized in the attribute DiagnosticEnvConditionFormula.nrcValue.</p>	
M2 Parameter	
DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition::DiagnosticEnvConditionFormula	
Mapping Rule	Mapping Type
A DcmModeRule is mapped to a DiagnosticEnvConditionFormula, if this DcmModeRule is a subrule, i.e. it is referenced by a DcmArgumentRef. In addition, a new DiagnosticEnvironmentalCondition shall be created with DiagnosticEnvironmentalCondition.formula containing a DiagnosticEnvConditionFormula. In both cases, if no DcmLogicalOperator is present in this DcmModeRule, then DiagnosticEnvConditionFormula shall be set to DiagnosticLogicalOperatorEnum.logicalAnd.	full

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmProcessingConditions/DcmModeRule	
BSW Parameter		BSW Type
DcmArgumentRef		ECUC-CHOICE-REFERENCE-DEF
BSW Description		
This is a choice reference either to a mode condition or a an other mode rule serving as sub-expression.		
Template Description		
A DiagnosticEnvConditionFormulaPart can either be a atomic condition, e.g. a DiagnosticEnvCompareCondition, or a DiagnosticEnvConditionFormula, again, which allows arbitrary nesting.		
M2 Parameter		
DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition::DiagnosticEnvConditionFormulaPart		
Mapping Rule		Mapping Type
Depending on the destination, one DcmArgumentRef is mapped to a DiagnosticEnvCondition Formula if "destination" is a DcmModeRule, and to a DiagnosticEnvCompareCondition, if "destination" is a DcmModeCondition. The order of the aggregation of the DiagnosticEnvCondition FormulaParts shall correspond to the ordering of the index of the DcmArgumentRefs.		full

<b>BSW Description</b>		
Defines the time out duration for "Event Passed" qualification.  The AUTOSAR configuration standard is to use SI units, so this parameter is defined as float value in seconds. Dem configuration tools must convert this float value to the appropriate value format for the use in the software implementation of Dem.		
<b>Template Description</b>		
This value represents the event-specific delay indicating the "passed" status.		
<b>M2 Parameter</b>		
CommonStructure::ServiceNeeds::DiagEventDebounceTimeBased.timePassedThreshold

DemEventConfirmationThreshold	ECUC-INTEGER-PARAM-DEF	
BSW Description		
Defines the operation cycle threshold of the DTC confirmation status according "Confirmation Threshold" of ISO 14229-1.		
Template Description		
This attribute defines the number of operation cycles with a failed result before a confirmed DTC is set to 1. The semantic of this attribute is a by "1" increased value compared to the confirmation threshold of the "trip counter" mentioned in ISO 14229-1 in figure D.4. A value of "1" defines the immediate confirmation of the DTC along with the first reported failed. This is also sometimes called "zero trip DTC". A value of "2" defines a DTC confirmation in the operation cycle after the first occurred failed. A value of "2" is typically used in the US for OBD DTC confirmation.

Configuration is only possible if DemOBDSupport is set to DEM_OBD_MASTER_ECU (see up_Dem_00131)	full
Mapping Status	ECUC Parameter ID
valid	[ECUC_Dem_00755]

BSW Module	BSW Context
Dem	Dem/DemConfigSet/DemObdDTC
BSW Parameter	BSW Type
DemJ1939DTCValue	ECUC-INTEGER-PARAM-DEF
BSW Description	
Unique Diagnostic Trouble Code value for J1939 (consisting of SPN and FMI). The SPN is encoded in the lower number range (0x7FFFF) and the FMI is encoded in the higher range (0xF80000).	
Template Description	
<b>DiagnosticTroubleCodeJ1939.spn:</b> This represents the related SPN.	
<b>DiagnosticTroubleCodeJ1939.fmi:</b> This attribute represents the behavior of the Failure Mode Indicator.	
M2 Parameter	
DiagnosticExtract::Dem::DiagnosticTroubleCode::DiagnosticTroubleCodeJ1939.spn, DiagnosticExtract::Dem::DiagnosticTroubleCode::DiagnosticTroubleCodeJ1939.fmi	
Mapping Rule	Mapping Type
The value is created out of a combination of the two attribute fmi and spn. The details are explained in the J1939-73 document	full
Mapping Status	ECUC Parameter ID
valid	[ECUC_Dem_00892]

BSW Module	BSW Context	
Dem	Dem/DemConfigSet/DemPidClass	
BSW Parameter	BSW Type	
DemPidDataElement	ECUC-PARAM-CONF-CONTAINER-DEF	
BSW Description		
This container contains the different data elements contained in the specific PID.		
Template Description		
This represents the data carried by the DiagnosticParameterIdentifier.		
M2 Parameter		
DiagnosticExtract::CommonDiagnostics::DiagnosticParameterIdentifier.dataElement		
Mapping Rule		Mapping Type
1:1 mapping		full
Mapping Status		ECUC Parameter ID
valid		[ECUC_Dem_00896]

BSW Module	BSW Context	
Dem	Dem/DemConfigSet/DemPidClass/DemPidDataElement	
BSW Parameter	BSW Type	
DemPidDataElementClassRef	ECUC-REFERENCE-DEF	
BSW Description		
This reference contains the link to a data element class.		
Template Description		
This meta-class represents the ability to describe a concrete piece of data to be taken into account for diagnostic purposes.		
M2 Parameter		
DiagnosticExtract::CommonDiagnostics::DiagnosticDataElement

DemIUMPRDenGroup		ECUC-ENUMERATION-PARAM-DEF	
BSW Description			

This parameter specifies the assigned denominator type which is applied in addition to the DEM_IUMPR_GENERAL_INDIVIDUAL_DENOMINATOR conditions.	
<b>Template Description</b>	
This meta-class represents the ability to model a IUMPR denominator groups.	
<b>M2 Parameter</b>	
DiagnosticExtract::Dem::DiagnosticEvent::DiagnosticIumprDenominatorGroup

BSW Description		
<p>The summarized EventId definition record consists of a summarized event ID and specific Dem Events.</p> <p>This record means that a particular FID that has to be disabled in case of summarized event (defined above) is to be disabled in any of the specific events. A possible solution could be assigning events as summarized events along with a list of specific events. During the configuration process the summarized event substitutes the referenced single events.</p> <p>However, it is not outlined how this requirement is solved - whether by configuration process or by implementation within the FiM. The FiM configuration tool could also build up a suitable data structure for summarized events and deal with it in the FiM implementation.</p>		
Template Description		
This meta-class represents the ability to model a Fim event group, also known as a summary event in Fim terminology. This represents a group of single diagnostic events.

BSW Parameter		BSW Type	
J1939DcmModeRule		ECUC-PARAM-CONF-CONTAINER-DEF	
BSW Description			
This container contains the configuration of a mode rule which represents a logical expression with J1939DcmModeConditions or other J1939DcmModeRules as arguments. All arguments are processed with the operator defined by DcmLogicalOperator, for instance: Argument_A AND Argument_B AND Argument_C			
Template Description			
A DiagnosticEnvConditionFormula embodies the computation instruction that is to be evaluated at runtime to determine if the DiagnosticEnvironmentalCondition is currently present (i.e. the formula is evaluated to true) or not (otherwise). The formula itself consists of parts which are combined by the logical operations specified by DiagnosticEnvConditionFormula.op. If a diagnostic functionality cannot be executed because an environmental condition fails then the diagnostic stack shall send a negative response code (NRC) back to the client. The value of the NRC is directly related to the specific formula and is therefore formalized in the attribute DiagnosticEnvConditionFormula.nrcValue.			

<b>M2 Parameter</b>	
DiagnosticExtract::Dcm::DiagnosticService::EnvironmentalCondition::DiagnosticEnvConditionFormula	
<b>Mapping Rule</b>	<b>Mapping Type</b>
A DcmModeRule is mapped to a DiagnosticEnvConditionFormula, if this DcmModeRule is a subrule, i.e. it is referenced by a DcmArgumentRef. In addition, a new DiagnosticEnvironmentalCondition shall be created with DiagnosticEnvironmentalCondition.formula containing a DiagnosticEnvConditionFormula. In both cases, if no DcmLogicalOperator is present in this DcmModeRule, then DiagnosticEnvConditionFormula shall be set to DiagnosticLogicalOperatorEnum.logicalAnd.	full

## F Splitable Elements in the Scope of this Document

This chapter contains a table of all model elements stereotyped `<<atpSplitable>>` in the scope of this document.

Each entry in the table consists of the identification of the specific model element itself and the applicable value of the tagged value `atp.Splitkey`.

For more information about the concept of splitable model elements and how these shall be treated please refer to [24].

**Table F.1: Usage of splitable elements**

## G Variation Points in the Scope of this Document

This chapter contains a table of all model elements stereotyped `<<atpVariation>>` in the scope of this document.

Each entry in the table consists of the identification of the model element itself and the applicable value of the tagged value `vh.latestBindingTime`.

For more information about the concept of variation points and how model elements that contain variation points shall be treated please refer to [24].

<i>Variation Point</i>	<i>Latest Binding Time</i>
<a href="#">DiagnosticAbstractDataIdentifier.id</a>	preCompileTime
<a href="#">DiagnosticAging.agingCycle</a>	preCompileTime
<a href="#">DiagnosticAging.threshold</a>	preCompileTime
<a href="#">DiagnosticCommonProps</a>	codeGenerationTime
<a href="#">DiagnosticConnectedIndicator.healingCycleCounterThreshold</a>	preCompileTime
<a href="#">DiagnosticContributionSet.element</a>	postBuild
<a href="#">DiagnosticContributionSet.serviceTable</a>	postBuild
<a href="#">DiagnosticDataIdentifier.dataElement</a>	postBuild
<a href="#">DiagnosticDebounceAlgorithmProps.debounceBehavior</a>	preCompileTime
