

Document Title	System Tests for Adaptive Platform Demonstrator
Document Owner	AUTOSAR
Document Responsibility	AUTOSAR
Document Identification No	890

Document Status	published
Part of AUTOSAR Standard	Adaptive Platform
Part of Standard Release	R24-11

Document Change History			
Date	Release	Changed by	Description
2024-11-27	R24-11	AUTOSAR Release Management	 Removed test case for PHM related to health channel Updated CM test scenarios
2023-11-23	R23-11	AUTOSAR Release Management	Removal of DeterministicClient API
2022-11-24	R22-11	AUTOSAR Release Management	Changed test configurationsEditorial changes
2021-11-25	R21-11	AUTOSAR Release Management	 Added test cases for LT, E2E and CRYPTO Added new sections for Health Management and State Management Removed REST test cases
2020-11-30	R20-11	AUTOSAR Release Management	 Added test cases for CM, REST, EMO, DIAG, PER, IAM, UCM and CRYPTO Added cross reference links to corresponding Test Configuration in the test cases Updated limitations for CRYPTO Removed acronyms which are already part of AUTOSAR glossary

		\bigtriangleup	
			Changed format for Actors (App, Events, Services etc.)
2019-11-28	R19-11	AUTOSAR Release	 Added new sections and test cases for Security Management, Network Management and Cryptography
		Management	 Added more test cases for CM, EMO, TS, and E2E
			 Changed Document Status from Final to published
			Changed format for RS traceability items
2019-03-29	19-03	AUTOSAR Release	 Added new section and test cases for Time Synchronization
		Management	 Added more test cases for CM, EMO, and DIAG
			Added RS traceability for test cases
		AUTOSAR	Added ISO 9646 framework and
2018-10-31	18-10	Release	mapping on system test architecture
		Management	 Added more test cases for CM, REST, EMO, and UCM
			Test case for RESTful communication is added
0010 00 01	10.00	AUTOSAR	 Test case for Security is added
2018-03-31	18-03 Release Management		 Test case for Update and Configuration Management is added
			 Test case for E2E is added
2017-10-27	17-10	AUTOSAR Release Management	Initial release

1 Acronyms and abbreviations

The glossary below includes terms, acronyms and abbreviations relevant to

System Test Specification that are not included in the AUTOSAR Glossary (see References).

Abbreviation / Acronym:	Description:
IUT	Implementation Under Test
NRC	Negative Response Code
RS	Requirement Specification
SM	State Manager
ST	System Test

2 Scope of Document

The system test cases are used to validate RS items in order to confirm whether requirements of functional cluster are satisfied by the AUTOSAR Adaptive Platform Demonstrator. Each test case is applicable with the coupled specification release.

In this release, Requirement Specifications of CM (someip), EMO, DIA, LT, PER, IAM, UCM, E2E, TS, SEC, NM and CRYPTO are in the scope of this document.

2.1 Supported hardware

For the current release, **Raspberry Pi 3 Model B** and **Raspberry Pi 4** shall be the supported hardware for test configurations.

2.2 Overview of test architecture

In this section, System Test architecture is described according to ISO 9646 test architecture manner. In System Test, FC tester is called as LT (Lower Tester) which stimulate and observe IUT (Implementation Under Test) behavior. AP instances is called as IUT (Implementation Under Test) which is the test target. Applications is called as UT (Upper Tester) which is stimulated by LT (Lower Tester) and take an action to request test step (e.g. sending message) to IUT.

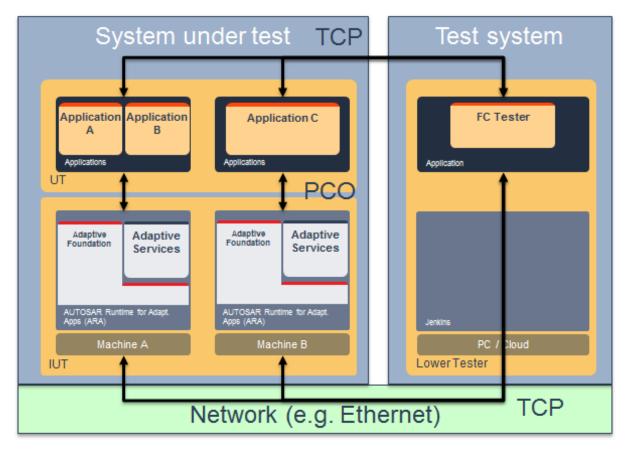

Figure 2.1: System Test architecture

The following picture describing that mapping to System Test implementation. In ST demonstrator, TCP (Test Coordination Procedures) is realized by stimulating application via Diagnostics routine service. PCO (Point of Control and Observation) is realized by requesting action via ARA::API, and receive/ transmit Ethernet message so that IUT could react. Application send message after certain step is passed so that test system could observe what happens on System under test.

System Tests for Adaptive Platform Demonstrator AUTOSAR AP R24-11

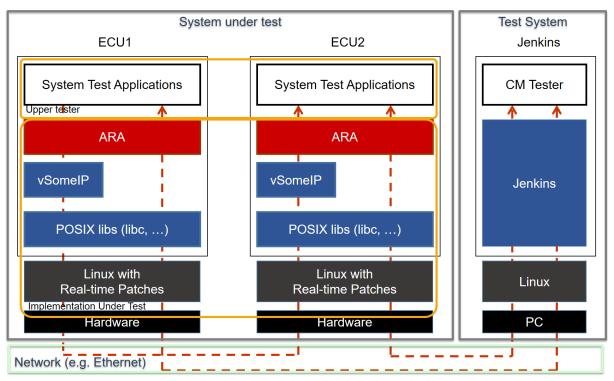

Figure 2.2: Map to System Test implementation

3 Limitations

There are several limitations in this document.

- Test cases may not cover whole RS as specified against test cases
- Test Setup and configurations are for reference purpose only and may cover broader scope than represented by test cases in corresponding sections
- Test cases may not be fully covered by corresponding system test implementations
- System test cases are just examples, since there could be many ways to define and implement use case scenarios
- DIAG traceability is obsolete as SRS is changed to RS
- LT does not have any RS traceability. Traceability will be added in next release
- In the E2E test case, the common parts of the E2E profiles are checked
- Time Base (TB) of Time Synchronization has five TB types. (Synchronized Master TB, Offset Master TB, Synchronized Slave TB, Offset Slave TB, Pure Local TB.) RS_TimeSynchronization describes multiple TB types as scope, but system test cases may not cover whole TB types.
- In Cryptography test cases [STS_CRYPTO_00002] Encrypting and decrypting data using an algorithm for asymmetric encryption/decryption primitives and [STS_CRYPTO_00004] Generation and verification of digital signature, both public and private keys are used by the test application to simplify the test case (i.e. not corresponding to practical use of asymmetric keys)
- In Cryptography test case [STS_CRYPTO_00006] Generation of random number, only deterministic random number generation is tested; true random number generation is not in the scope of the system test.
- Even if the behaviour is different, same application and/or service numbers are used across different test cases

4 Test configuration and test steps for Communication Management

4.1 Test System

4.1.1 Test configurations Communication Management

Configuration ID	on ID STC_CM_00001	
Description	Standard Jenkins server for Communication Management test	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

Configuration ID	STC_CM_00002	
Description	Scenario 2 Variant 2 - Reference Deployment	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the job with the Communication Management test ([CM Tester]) is connected via Ethernet to [ECU1] hosting the System Test Application [CMApp01] (as well as [CMApp04] on the alternative configuration) and [ECU2] hosting the System Test Applications [CMApp02], [CMApp03], [CMApp04] and [CMApp05].

The [CM Tester] is supposed to collect the results.

The communication between [CM Tester] and the applications on the ECU may take place over the Diagnostics functional cluster in form of diagnostic messages.

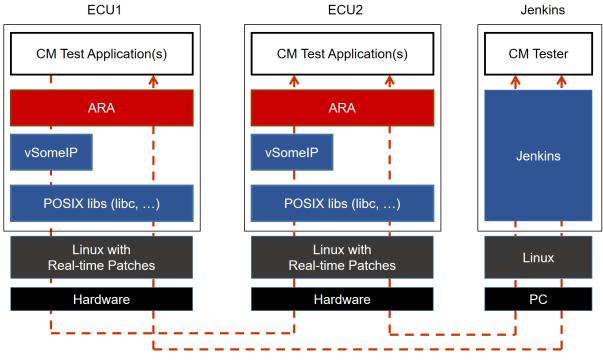

Figure 4.1: Illustration of test setup for Communication Management

4.1.2 Test configurations SignalToService

Configuration ID	n ID STC_S2S_00001	
Description	Test configuration for SignalToService Translation testcases.	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Classic platform ECU, 192.168.7.16	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the [CM Tester] is connected to ECU1 - Adaptive Platform and ECU2 - Classic Platform.

The [CM Tester] is supposed to collect the results.

4.2 Test cases

4.2.1 [STS_CM_00001] Local and remote service discovery.

Step 2	[CM Tester] Trigger Application [CMApp12] to Start Offering service [CMService06].		
Step 3	[CMApp13] Subscribe to service [CMService06].		
Step 4	[CMApp13] Queue received events, <n> being the queue length.</n>		
Step 5	[CMApp14] Subscribe to service [CMService06].		
Step 6	[CMApp14] Queue received events, <n> being the queue length.</n>		
Step 7	[CMApp13] Monitor state of subscription over service [CMService06].	gets the current status of subscription and notification if it changes from service [CMService06] of application [CMApp13].	
Step 8	[CMApp14] Monitor state of subscription over service [CMService06].	gets the current status of subscription and notification if it changes from service [CMService06] of application [CMApp14].	
Step 9	[CM Tester] Trigger Application [CMApp12] to Start sending service [CMService06].		
Step 10	[CMApp12] send service event [CMService06].		
Step 11	[CMApp13] Get triggered when receiving event over service [CMService06] of application [CMApp12].	Event is received over service [CMService06] of application [CMApp12].	
Step 12	[CMApp14] Get triggered when receiving event over service [CMService06] of application [CMApp14].	Event is received over service [CMService06] of application [CMApp12].	
Step 13	[CM Tester] Trigger Application [CMApp13] to Stop subscription of service [CMService06].		
Step 14	[CM Tester] Trigger Application [CMApp14] to Stop subscription of service [CMService06].		
Step 15	[CMApp13] Monitor state of subscription from service [CMService06] of application [CMApp12].	gets the current status of subscription, i.e. [CMApp13] has stopped subscription from service [CMService06].	
Step 16	[CMApp14] Monitor state of subscription from service [CMService06] of application [CMApp12].	gets the current status of subscription, i.e. [CMApp14] has stopped subscription from service [CMService06].	

/	< l
	7

Step 17	[CM Tester]	FunctionGroup on [ECU1] and [ECU2]
	Request change of Function Group State [SystemTestFunctionGroup] to [Off] for [ECU1] and [ECU2].	are changed to [SystemTestFunctionGroup] with State [Off].

4.2.5 [STS_CM_00005] Communication for Fields.

Test Objective	To verify that the applications are able to query (get) and modify (set) field value and that communication work for Fields.			
ID	STS_CM_00005	State		Draft
Affected Functional Cluster	Communication Management			
Trace to RS Criteria	[RS_CM_00216], [RS_C [RS_CM_00221]	M_00217], [RS_CM_0021	18], [RS_C	CM_00219], [RS_CM_00220],
Reference to Test Environment	STC_CM_00001 in Test	configurations Communic	ation Man	agement
Configuration	- The existing communic	ation services comprise th	ne following	g (service names are arbitrary):
Parameters	- [CMService07]: Offered	d by [CMApp16], requeste	d by [CMA	.pp15].
Summary	First [CM Tester] request to [STS_CM_00005].	applications on [ECU1] a	nd [ECU2]] to change [SystemTestFunctionGroup]
	[CM Tester] requests [CN	App15] to get the current	t field valu	e of service [CMService07].
	In turn [CMApp15] reque	ests [CMApp16] to get the	current fie	ld value of service [CMService07].
	The [CMApp16] provides	a method to get the curre	ent field va	lue of service [CMService07].
	[CM Tester] requests [CMApp15] to set the current field value of service [CMService07].			
	In turn [CMApp15] requests [CMApp16] to set the current field value of service [CMService07].			
	The [CMApp16] provides a method to set the current field value of service [CMService07].			
	[CMApp16] sends normal return code notification to [CMApp15].			
	[CMApp15] returns a normal return code to [CM Tester].			
	Note: As for order of offering, no particular order of offering and requesting is necessary.			
Pre-conditions	- [CM Tester] is connected to both ECUs.			
	- Both ECUs are in Machine State Driving.			
	- [CMApp15] on [ECU1], [CMApp16] on [ECU2] are shutdown according to [SystemTestFunctionGroup].			
	- A field without a setter and without a getter shall not exist.			
	- The field shall contain at least a getter or a setter.			
Post-conditions	- CM Tester is disconnected to both ECUs.			
Main Test Execution	1			r
Test Steps	Pass Criteria			Pass Criteria
Step 1	[CM Tester]			FunctionGroup on [ECU1] and [ECU2]
	Request change of Func [SystemTestFunctionGro [ECU1] and [ECU2].	tion Group State up] to [STS_CM_00005] f	or	are changed to [SystemTestFunctionGroup] with State [STS_CM_00005].

/	\
L	7

Step 2 [CM Tester]		
	Request [CMApp15] to get the current field value of service [CMService07].	
Step 3	[CMApp15]	[CMApp16]
	Request [CMApp16] to get the current field value of service [CMService07].	Receives the request from application [CMApp15].
Step 4	[CMApp16]	[CMApp15]
	Provides a method to get the current field value of service [CMService07].	Receives response message from [CMApp16].
Step 5	[CMApp15]	[CM Tester]
	Returns the current field value of service [CMService07] to [CM Tester].	Receives the default field value (e.g. zero) of [CMService07].
Step 6	[CM Tester]	
	Request [CMApp15] to set the current field value of service [CMService07].	
Step 7	[CMApp15]	[CMApp16]
	Request [CMApp16] to set the field value of service [CMService07].	Receives the request from application [CMApp15].
Step 8	[CMApp16]	[CMApp15]
Provides a method to set the current field value of service [CMService07].		Receives response message from [CMApp16].
Step 9 [CMApp16]		[CMApp15]
sends normal response to [CMApp15].		Receives response from[CMApp16].
Step 10 [CMApp15]		[CM Tester]
returns a normal return code to CM tester		Receives termination notification from[CMApp16].
Step 11 [CM Tester]		
Request [CMApp15] to get the set field value of service [CMService07].		
Step 12	[CMApp15]	[CMApp16]
Request [CMApp16] to get the current field value of service [CMService07].		Receives the request from application [CMApp15].
Step 13 [CMApp16] [CMApp15]		[CMApp15]
Provides a method to get the current field value of service [CMService07].		Receives response message from [CMApp16].
Step 14	[CMApp15]	[CM Tester]
	Returns the set field value of service [CMService07] to [CM Tester].	Receives the set field value (set in the previous steps) of [CMService07].
Step 15	[CM Tester]	[CM Tester]
	Request change of Function Group State [SystemTestFunctionGroup] to [Off] for [ECU1] and [ECU2].	FunctionGroup on [ECU1] and [ECU2] are changed to [SystemTestFunctionGroup] with State [Off].

4.2.6 [STS_CM_00006] Communication for Field Notification.

Test Objective	To verify that the applications	are able to receive notification	as and that communication work for Fields.

Configuration	- The existing communication	services comprise the following	ng (service names are arbitrary):
Parameters	- [CMService08]: Offered by [CMApp17], requested by [CM	App18].
Summary	First [CM Tester] request app to [STS_CM_00006].	lications on [ECU1] and [ECU2	2] to change [SystemTestFunctionGroup]
	[CM Tester] requests [CMApp	17] to offer event notification of	of service [CMService08].
	[CM Tester] requests [CMApp	o18] to set value <x> (not defai</x>	ult value).
	In turn [CMApp18] requests [CMApp17] to set value <x>.</x>	
	[CMApp17] sends normal retu	urn code to [CMApp18].	
	[CMApp18] sends a normal re	eturn code to [CM Tester].	
	[CM Tester] receives normal r	eturn code.	
	[CMApp17] sends event notifi	cation of changing value.	
	[CMApp18] receives event notification value.		
	[CM Tester] requests [CMApp18] to confirm receiving event notification value.		
	[CMApp18] sends received event notification value to [CM Tester].		
	[CM Tester] receives event notification value.		
	Note: As for order of offering, no particular order of offering and requesting is necessary.		
Pre-conditions	- [CM Tester] is connected to both ECUs.		
	- Both ECUs are in Machine State Driving.		
	- [CMApp17] on [ECU1], [CMApp18] on [ECU2] are shutdown according to [SystemTestFunctionGroup].		
	- A field without a notifier shall not exist.		
	- The field shall contain at least one notifier.		
Post-conditions	Post-conditions CM Tester is disconnected to both ECUs.		
Main Test Execution			
Test Steps	Pass Criteria		
Step 1	[CM Tester] Request change of [SystemTe [STS_CM_00006].	estFunctionGroup] to	FunctionGroup on [ECU1] and [ECU2] are changed to [SystemTestFunctionGroup] with State [STS_CM_00006].
Step 2	[CM Tester]		
	Requests [CMApp17] to offer event notification of service [CMService08].		
Step 3 [CMApp17]			
	offer service [CMService08].		
Step 4	[CM Tester]		
	Requests [CMApp18] to subs	cribe service [CMService08].	

Λ	

Step 5	[CMApp18]	
	subscribe service [CMService08].	
Step 6	[CMApp17]	[CM Tester] Receives the return code.
	Sends normal return code of [CMService08] event subscription to [CMApp18].	
Step 7	[CM Tester]	
	Requests [CMApp18] to set value <x> (not default value).</x>	
Step 8	[CMApp18]	[CMApp17]
	Requests [CMApp17] to set value <x>.</x>	Receives the request from [CMApp18].
Step 9	[CMApp17]	[CMApp18]
	Sends normal return code of setting to [CMApp18].	Receives response message from [CMApp17].
Step 10	[CMApp18]	[CM Tester]
	Sends a normal return code to [CM Tester].	Receives the normal return code.
Step 11	[CMApp17]	[CMApp18]
	Sends event notification value.	Receives event notification value from [CMApp17].
Step 12	[CM Tester]	
	After time <tx>, requests [CMApp18] to confirm receiving event notification value.</tx>	
Step 13	[CMApp18]	[CM Tester]
	Sends received event notification to [CM Tester].	Receives event notification value.
Step 14	[CM Tester]	[CM Tester]
	Request change of Function Group State [SystemTestFunctionGroup] to [Off] for [ECU1] and [ECU2].	FunctionGroup on [ECU1] and [ECU2] are changed to [SystemTestFunctionGroup] with State [Off].

4.2.7 [STS_CM_00007] Service discovery evaluating service contract version.

Test Objective	To verify whether service discovery can establish the communication path between applications by evaluating service version and black listed version.

Step 9	[DDSApp03] call the Method_D over the service [DDSService05].	[DDSApp01] Method_D should get invoked with input data.
Step 10	[DDSApp01] stop offering the service [DDSService04] and [DDSService05].	

5 Test configuration and test steps for Execution Management

5.1 Test System

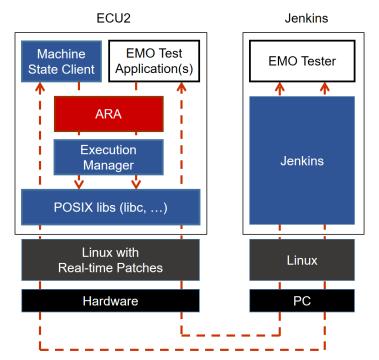

Figure 5.1: Illustration of test setup for Execution Management.

5.1.1 Test configurations

5.1.1.1 STC_EMO_00001

Configuration ID	STC_EMO_00001	
Description	Description Standard Jenkins server for Execution Management test	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the job with the Execution Management test (Exec Tester) is connected via Ethernet to ECU2 hosting the System Test Applications [EMOApp02], [EMOApp03], [EMOApp04] and [EMOApp05].

The Exec Tester is supposed to check the pass criteria.

The communication between Exec Tester and the applications on the ECU may take place over the Diagnostics functional cluster in form of diagnostic messages.

6 Test configuration and test steps for Diagnostics

6.1 Test System

6.1.1 Test configurations

6.1.1.1 STC_DIAG_00001

Configuration ID	STC_DIAG_00001
Description	Standard Jenkins server for diagnostic test
ECU 1	Hardware, 192.168.7.12
Jenkins	Jenkins Server, 192.168.7.10

The Jenkins Server running the job with the [Diagnostic Tester] is connected via Ethernet to [ECU1] hosting the System Test Application [DIAGApp01] respectively. The [Diagnostic Tester] will open TCP connections on port 13400 and send diagnostic data as UDS requests in DoIP packets.

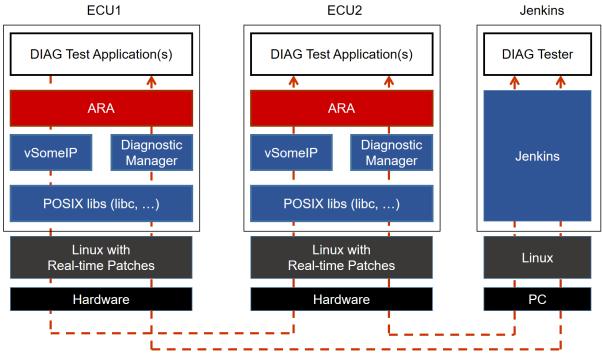

Figure 6.1: Illustration of test setup for Diagnostics.

6.1.1.2 STC_DIAG_00002

Configuration ID	STC_DIAG_00002	
Description	Standard Jenkins server for diagnostic test	
ECU 1	Hardware, 192.168.7.12	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server running the job with the [Diagnostic Tester] is connected via Ethernet to [ECU1] hosting the System Test Application [DIAGApp01] respectively. The [Diagnostic Tester] will open TCP connections on port 13400 and send diagnostic data as UDS requests in DoIP packets.

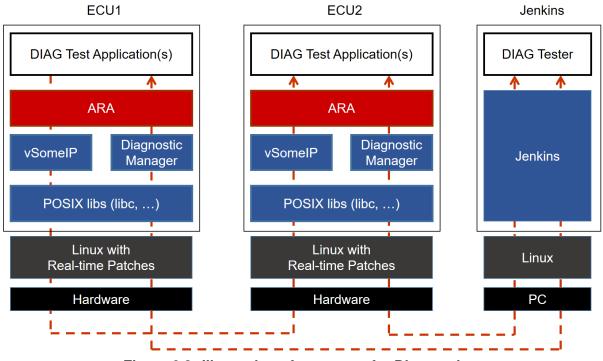

Figure 6.2: Illustration of test setup for Diagnostics.

DEM Configuration Parameters :

- DiagnosticMemoryDestination should be configured for the DTC
- DiagnosticMemoryDestination.typeOfFreezeFrameRecordNumeration should be set
- to "Calculated"
- DiagnosticEnableCondition should be configured for DiagnosticEvent
- DiagnosticCommonProps.memoryEntryStorageTrigger should be configured to "con firmed"
- DiagnosticTroubleCodeProps.freezeFrame reference should exists
- DiagnosticTroubleCodeProps.maxNumberFreezeFrameRecords should be "1"

- DiagnosticTroubleCodeProps.snapshotRecordContent should be configured
- DiagnosticFreezeFrame.trigger should be "confirmed"
- DiagnosticFreezeFrame.recordNumber should be configured to "1"
- DiagnosticFreezeFrame.update should be "true"
- OperationCycle should be configured
- DiagnosticOperationCycle.cycleAutostart should be configured as "false"
- DiagnosticOperationCycle.automaticEnd should be configured as "false"
- DiagnosticOperationCycle.cycleStatusStorage should be configured as "false
- DiagnosticEvent.eventClearAllowed should be configured as "always"
- DiagnosticEvent.clearEventBehavior should be configured as "onlyThisCycleAndRea
- diness"
- DiagnosticEvent.recoverableInSameOperationCycle should be configured as "true"
- <1000> service instance should be configured for DiagnosticOperationCycleInterface
- <1001> service instance should be configured for DiagnosticConditionInterface
- <1002> service instance should be configured for DiagnosticDTCInformationInterface
- <1003> service instance should be configured for DiagnosticMonitorInterface
- <1004> service instance should be configured for DiagnosticEventInterface

6.2 Test cases

6.2.1 [STS_DIAG_00001] Utilization of Diagnostic service ReadDataByldentifier (0x22) by external Tester via UDS messages over DoIP.

Test Objective	Verification of correct behavior of Diagnostic service ReadDataByIdentifier (0x22) by external Tester via UDS messages over DoIP.			
ID	STS_DIAG_00001	State	Draft	
Affected Functional Cluster	Diagnostic			
Trace to RS Criteria	RS_Diag_04196, RS_Diag_04203, RS_Diag_04172			
Reference to Test Environment	STC_DIAG_00001			
Configuration Parameters	 Diagnostics module: Service instance for service ReadDataByIdentifier with DID <0x0001> is configured. Service instance with DID <0x0099> is NOT configured. 			

	\bigtriangleup		
Summary	This basic test tries to query the value of a variable contained by [DIAGApp01] on [ECU1] over the AP Diagnostics Module. The UDS service ReadDataByldentifier (0x22) is used. The AP Diagnostics Module has to call a service in the Application Layer to retrieve the requested information and send it back as UDS response. If an unknown identifier is queried, a negative response must be sent.		
Pre-conditions	- [Diagnostic Tester] is connected to [ECU1] via TCP socket or	n DoIP-Port.	
	- Software components on [ECU1] are initialized.		
Post-conditions	TCP connection between [Diagnostic Tester] and [ECU1] is clo	osed.	
Main Test Execution	1		
Test Steps		Pass Criteria	
Step 1	[Diagnostic Tester]		
	Send Routing Activation Request (0x00005) with Activation type : Default(0x00)		
Step 2	[DIAGApp01]		
	Send Routing Activation Response		
Step 3	[Diagnostic Tester]		
	Send UDS Request to query value of <int1>:</int1>		
	UDS-Service: ReadDataByldentifier		
	UDS-Payload: 0x22		
Step 4	[DIAGApp01]		
	Start mechanism to read the value of <int1>.</int1>		
Step 5	[Diagnostic Tester] Receive UDS response and save value of <int1> in <var1>.</var1></int1>	Positive response received (0x62). Payload of UDS response contains DID data with value of <int1>.</int1>	
Step 6	[DIAGApp01]		
	Start mechanism to change the value of <int1> by <delta>.</delta></int1>		
Step 7	[Diagnostic Tester]		
	Send UDS Request to query value of <int1>:</int1>		
	UDS-Service: ReadDataByIdentifier		
	UDS-Payload: 0x22		
Step 8	[DIAGApp01]		
	Start mechanism to read value of <int1> and return it as DID data.</int1>		
Step 9	[Diagnostic Tester]	Positive response received (0x62).	
	Receive UDS response and save value of <int1> in <var2>.</var2></int1>	Payload of UDS response contains DID data. Compare values of <var1> and <var2>. <var2> should be greater than <var1> by <delta> i.e.</delta></var1></var2></var2></var1>	
		<var2>=<var1> + <delta>.</delta></var1></var2>	
Step 10	[Diagnostic Tester] Send UDS Request to query data with a non-implemented DID:	Tester receives negative response: 0x7F 0x22 0x31.	
	UDS-Service: ReadDataByIdentifier		
	UDS-Payload: 0x22		

6.2.2 [STS_DIAG_00002] Utilization of Diagnostic service RoutineControl (0x31) by external Tester via UDS messages over DoIP.

Test Objective	Verification of correct behavior of Diagnostic service RoutineControl (0x31) by external Tester via UDS messages over DoIP.		
ID	STS_DIAG_00002 State	Draft	
Affected Functional Cluster	Diagnostic		
Trace to RS Criteria	RS_Diag_04224, RS_Diag_04196, RS_Diag_04203, RS_Diag_04006 RS_Diag_04172		
Reference to Test Environment	STC_DIAG_00001		
Configuration Parameters	- The following service is configured		
	[DIAGService01] in [DIAGApp01] - In this [DIAGService01], two	o different contents are available	
	<pre> <content1></content1></pre>		
	 <content2></content2> Diagnostics module: 		
	ů – Č	01> is configured and only available in	
	 Service instance for service RoutineControl with RID <0x0001> is configured and only available in Extended Diagnostic Session. 		
	 Service Diagnostic Session Control is configured. 		
Summary	This test tries to start a routine in [DIAGApp01] over the AP Diagnostics Module and the UDS service RoutineControl (0x31). In DefaultSession, execution is not allowed and a negative response is sent. After switching to ExtendedDiagnosticSession, the routine is started and a positive response is sent.		
Pre-conditions	- [Diagnostic Tester] is connected to [ECU1] via TCP socket on DoIP-Port.		
	- Software components on [ECU1] are initialized.		
	- [DIAGApp01] sends <content1> via [DIAGService01].</content1>		
Post-conditions	TCP connection between Jenkins server and [ECU1] is closed	J.	
Main Test Executio	n		
Test Steps		Pass Criteria	
Step 1	[Diagnostic Tester]		
	Send Routing Activation Request (0x00005) with Activation type : Default(0x00)		
Step 2	[DIAGApp01]		
	Send Routing Activation Response		
Step 3	[Diagnostic Tester]	Negative response received: Service	
	Send UDS request to change content of [DIAGService01]:	Not Supported in Active Session (0x7F 0x31 0x7F).	
	UDS-Service: RoutineControl		
	UDS-Payload: 0x31 0x01		
Step 4	[Diagnostic Tester]	Positive response received (0x50	
	Send UDS request to start an Extended Diagnostic Session:	0x03).	
	UDS-Service: DiagnosticSessionControl		
	UDS-Payload: 0x10 0x03		

~	
	\

Step 5	[Diagnostic Tester]	
	Send UDS request to change content of [DIAGService01] from <content1> to <content2>:</content2></content1>	
	UDS-Service: RoutineControl	
	UDS-Payload: 0x31 0x01	
Step 6	[DIAGApp01]	Content of Service is changed to
	Start mechanism to change content of [DIAGService01] from <content1> to <content2></content2></content1>	<content2></content2>
Step 7	[DIAGApp01]	
	Return from Subfunction Start of Routine with RID <0x0001>.	
Step 8	[Diagnostic Tester]	Positive response received (0x71).
	Receive UDS response.	
Step 9	[Diagnostic Tester]	Positive response received (0x50
	Send UDS request to start an Default Diagnostic Session:	0x01).
	UDS-Service: DiagnosticSessionControl	
	UDS-Payload: 0x10 0x01	
Step 10	[Diagnostic Tester]	Negative response
	Send UDS request to start an Invalid Diagnostic Session:	sub-functionNotSupported is received (0x7F 0x10 0x12).
	UDS-Service: DiagnosticSessionControl	(,,,,,
	UDS-Payload: 0x10 0x50	
Step 11	[Diagnostic Tester]	Negative response received: Service
	Send UDS request to change content of [DIAGService01]:	Not Supported in Active Session (0x7F 0x31 0x7F).
	UDS-Service: RoutineControl	
	UDS-Payload: 0x31 0x01	

6.2.3 [STS_DIAG_00003] Utilization of Diagnostic service TesterPresent (0x3E) by External Tester via UDS messages over DoIP.

Test Objective	Verification of correct behavior of Diagnostic service TesterPresent (0x3E) by External Tester via UDS messages over DoIP.			
ID	STS_DIAG_00003	State	Draft	
Affected Functional Cluster	Diagnostic			
Trace to RS Criteria	RS_Diag_04196, RS	_Diag_04203, RS_Diag_04	006, RS_Diag_04020	
Reference to Test Environment	STC_DIAG_00001			
Configuration	Diagnostics module:			
Parameters	 Service instance for service RoutineControl with RID <0x0001> is configured and only available in Extended Diagnostic Session. 			
	Service Diagnostic Session Control and Extended Diagnostic Session time out is configured.			
	TesterPresent is configured.			

System Tests for Adaptive Platform Demonstrator AUTOSAR AP R24-11

	^
L	7

Summary	TesterPresent request is sent to indicate that previously activated non-default (e.g. extended) session will still be active. The UDS service RoutineControl (0x31) is executed to check if Extended session is active (Any other service which is supported in extended session may be used). Positive response is received for the TesterPresent request if suppressPosRspMsgIndicationBit is set to FALSE. No response is expected (by Client) from Server if, suppressPosRspMsgIndicationBit is set to TRUE		
Pre-conditions	- [Diagnostic Tester] is connected to [ECU1] via TCP socket on DoIP-Port.		
	- Software components on [ECU1] are initialized.		
Post-conditions	TCP connection between Jenkins server and [ECU1] is closed	l.	
Main Test Execution	n		
Test Steps		Pass Criteria	
Step 1	[Diagnostic Tester]		
	Send Routing Activation Request (0x00005) with Activation type : Default(0x00)		
Step 2	[DIAGApp01]		
	Send Routing Activation Response		
Step 3	[Diagnostic Tester]	Positive response received	
	Send UDS request to start an Extended Diagnostic Session:	(0x50 0x03).	
	UDS-Service: DiagnosticSessionControl(SID 0x10)		
	UDS-Payload: 0x10 0x03		
Step 4	[Diagnostic Tester]		
	Wait for time <t1> such that <t1> is less than Diagnostic session timer timeout.</t1></t1>		
Step 5	[Diagnostic Tester]	Positive response received	
	Send UDS request Tester Present with suppressPosRspMsg IndicationBit is set to FALSE.	(0x7E 0x00).	
	UDS-Service: TesterPresent (SID 0x3E)		
	UDS-Payload: 0x3E 0x00		
Step 6	[Diagnostic Tester]		
	Wait for time <t2> such that -</t2>		
	1) <t2> is greater than Diagnostic session timer timeout.</t2>		
	 2) <t2> is less than sum of Extended session timer and Diagnostic session timer timeout.</t2> 		
Step 7	[Diagnostic Tester]	Positive response received	
	Send UDS request RoutineControl to confirm if Extended Session is active.	(0x71).	
	UDS-Service: RoutineControl (SID 0x31)		
	UDS-Payload: 0x31 0x01		
Step 8	[Diagnostic Tester]		
	Stop sending TesterPresent and wait for Extended Diagnostic Session to time out		
Step 9	[Diagnostic Tester]	Negative response received: Service	
	Send UDS request RoutineControl to confirm if Extended Session is active.	Not Supported in Active Session (0x7F 0x31 0x7F (NRC)).	
	UDS-Service: RoutineControl		
	UDS-Payload: 0x31 0x01

Step 16	[DIAGApp01]	Group of DTC is not available,Send
	Implementation of service Clear DTC is invoked.Check if	NRC-31.
	requested DTC group is available.	
Step 17	[Diagnostic Tester]	Negative response received (0x7F
	Receive UDS response	0x14 0x31)

6.2.7 [STS_DIAG_00007] Utilization of Diagnostic service SecurityAccess (0x27) by External Tester via UDS messages over DoIP.

Test Objective	Verification of correct behavior of Diagnostic service SecurityAccess (0x27) by External Tester via UDS messages over DoIP.			
ID	STS_DIAG_00007	State	Draft	
Affected Functional Cluster	Diagnostic			
Trace to RS Criteria	RS_Diag_04005, RS_	_Diag_04172		
Reference to Test Environment	STC_DIAG_00001			
Configuration	Diagnostics module:			
Parameters	- Service instances fo	r service Security access are configured		
	- Service instances fo	r Service ReadDataByIdentifier with DID	<0x0001> are configured.	
	- Sub functions (Secu	rityAccessType) are configured.		
Summary	This basic test tries to get an access of an ECU using Diagnostic service Security Access and try to access some secured parameters (DID <0x0001>)of an ECU. Tester first request for SEED, ECU responds with the SEED Value(random 2 byte number). Tester then generates the Key using the received SEED(Lower nibble of each byte masked with 0 ,Note that this could be OEM specific we are considering this as an example for demonstration) and send it to an ECU.ECU then verifies the key and grants access (Positive Response) .If Length of the request /sub function is not supported, then ECU shall send NRC			
Pre-conditions	- [Diagnostic Tester] is	s connected to [ECU1] via TCP socket or	n DoIP-Port	
	- Software components on [ECU1] are initialized.			
Post-conditions	TCP connection between [Diagnostic Tester] and [ECU1] is closed.			
Main Test Executio	n		_	
Test Steps			Pass Criteria	
Step 1	[Diagnostic Tester]			
	Send Routing Activati type : Default(0x00)	on Request (0x00005) with Activation		
Step 2	[DIAGApp01]			
	Send Routing Activati	on Response		
Step 3	[Diagnostic Tester]			
	Send UDS request to	Send UDS request to gain SecurityAccessType - 1		
	SID : 0x27			
	Payload - 0x27 01			
Step 4	[DIAGApp01]		Seed (2 bytes of random number)is	
	Implementation of me	thod RequestSeed is invoked	generated successfully and response is sent	
Step 5	[Diagnostic Tester]			
	Send Request to Sen	dKey		
	SID: 0x27			
	Payload : 0x27 0x02			
Step 6	[DIAGApp01]		Check if the received Key is equal to	
	4		internally generated key , if yes send	

_

Step 7	[Diagnostic Tester]	Positive response (0x67) is received	
	Receive positive response.		
Step 8	[Diagnostic Tester]		
	Send Request to read a secured paramter <var1> using ReadDID Service</var1>		
	SID : 0x22		
	Payload : 0x22 0x00 0x01		
Step 9	[DIAGApp01]	Provide value of <var1> as a</var1>	
	Invoke Service ReadDataByIdentifier	response	
Step 10	[DiagnosticTester]	Positive response (0x62 0x00 0x01	
	Receive UDS Service response	var1)	
Step 11	[Diagnostic Tester]		
	Send UDS request to gain SecurityAccessType -1		
	SID : 0x27		
	Payload - 0x27 01		
Step 12	[DIAGApp01]	Check the length of the UDS security	
	Implementation of Method - RequestSeed is invoked.	request, if the length is not correct send NRC-13	
Step 13	[Diagnostic Tester]	Negative response received (0x7F	
	Receive UDS response	0x27 0x13)	
Step 14	[Diagnostic Tester]		
	Send UDS request to gain SecurityAccessType - 2		
	SID : 0x27		
	Payload - 0x27 02		
Step 15	[DIAGApp01]	Check if the sub function	
	Implementation of Method - RequestSeed is invoked.	(SecurityAccessType -2) is supported or not. If not send NRC-12	
Step 16	[Diagnostic Tester]	Negative response (0x7F 0x27 0x12)	
	Receive UDS response		

6.2.8 [STS_DIAG_00008] Utilization of Diagnostic service ReadDTCInformation (0x19) by External Tester via UDS messages over DoIP.

Test Objective	Verification of correct behavior of Diagnostic service ReadDTCInformation (0x19) by external Tester via UDS messages over DoIP.

6.2.9 [STS_DIAG_00009] Storing and Reading of DTC status and snapshot data.

Test Objective	Storing and Reading of DTC status and snapshot data in the primary fault memory defined by ISO 14229-1.		
ID	STS_DIAG_00009	State	Draft
Affected Functional Cluster	Diagnostic		
Trace to RS Criteria		5_Diag_04186, RS_Diag_04148, RS_E 5_Diag_04127, RS_Diag_04136,	0iag_04183, RS_Diag_04151,
Reference to Test Environment	STC_DIAG_00002		
Configuration	Diagnostics module:		
Parameters	1. DiagnosticMonitor	should be configured for DiagnosticEv	vent <event0></event0>
	2. DTC should be co	nfigured for the DiagnosticEvent <even< th=""><th>nt0></th></even<>	nt0>
	3. agingAllowed shou	uld be "false"	
	4. DiagnosticTrouble	CodeUds.udsDtcValue should be confi	gured as "1"
	5. DiagnosticEvent.e	ventFailureCycleCounterThreshold she	ould be configured as "127"
Summary	EventStatus change, condition, Notificatior	n about changing state of enable condi apshot data change, Reading DTC sta	tting of OperationCycle, Setting of enable tion, Getting DTC and Event status,
Pre-conditions	- [Diagnostic Tester] i	is connected to [ECU1] via TCP socke	t on DoIP-Port
	- Software components on [ECU1] are initialized.		
	- Proxies should be available for DiagnosticOperationCycleInterface, DiagnosticConditionInterface, DiagnosticDTCInformationInterface, DiagnosticMonitorInterface and DiagnosticEventInterface		
Post-conditions	TCP connection betw	veen [Diagnostic Tester] and [ECU1] is	closed.
Main Test Execution	n		
Test Steps			Pass Criteria

,	
/	/

Step 1	[Diagnostic Tester]	
Step 1	Send Routing Activation Request (0x00005) with Activation	
	type : Default(0x00).	
Step 2	[DIAGApp01]	
	Send Routing Activation Response.	
Step 3	[DIAGApp01]	[DIAGApp01]
	Call SetOperationCycle with "kOperationCycleStart" for "Event0".	SetNotifier() of DiagnosticOperationCycleInterface method should be called with kOperationCycleStart.
		[DIAGApp01]
		SetDTCStatusChangedNotifier() should be called.
		[DIAGApp01]
		SetEventStatusChangedNotifier() should be called.
Step 4	[DIAGApp01]	[DIAGApp01]
	Call GetEventStatus.	It should return EventStatusByte as 0x40.
Step 5	[DIAGApp01]	[DIAGApp01]
	Call GetCurrentStatus.	It should return UdsDtcStatusBitType as 0x50.
Step 6	[DIAGApp01]	[DIAGApp01]
	Call SetCondition with "kConditionTrue" for "Event0"	InitMonitorReason() should be called with kReenabled.
Step 7	[DIAGApp01]	[DIAGApp01]
	Call GetCondition for "Event0".	It should return 0x01.
Step 8	[DIAGApp01]	[DIAGApp01]
	Call ReportMonitorAction with MonitorAction as kFailed from DiagnosticMonitor Application.	InitMonitorReason() should be called with MonitorAction as kFailed.
		[DIAGApp01]
		SetDTCStatusChangedNotifier() should be called.
		[DIAGApp01]
		SetEventStatusChangedNotifier() should be called.
		[DIAGApp01]
		SetSnapshotRecordUpdatedNotifier() should be called for snapShotData Change for DID 1.
Step 9	[DIAGApp01]	[DIAGApp01]
	Call GetEventStatus.	It should return EventStatusByte as 0x03.
Step 10	[DIAGApp01]	[DIAGApp01]
	Call GetCurrentStatus	It should return UdsDtcStatusBitType as 0x2F
Step 11	[Diagnostic Tester]	[DiagnosticManager]
	Call ReadDTCInformation (0x19) for reading snapShotData of DID 1 19 04 0xFF.	It should return stored DTC status and SnapShot data of DID 1.

6.2.10 [STS_DIAG_00010] Control of DTC storage via UDS service 0x85.

Test Objective	The diagnostic in AU	TOSAR shall support control of DTC stor	rage via UDS service 0x85.
ID	STS_DIAG_00010	State	Draft
Affected Functional Cluster	Diagnostic		
Trace to RS Criteria	RS_Diag_04159		
Reference to Test Environment	STC_DIAG_00002		
Configuration Parameters	 Diagnostics module: 1. DiagnosticMonitor should be configured for DiagnosticEvent <event0></event0> 2. DTC should be configured for the DiagnosticEvent <event0></event0> 3. agingAllowed should be "false" 4. DiagnosticTroubleCodeUds.udsDtcValue should be configured as "1" 5. DiagnosticEvent.eventFailureCycleCounterThreshold should be configured as "127" 		
	U U		
Summary	This test case covers EnableControlDtc.	functionality of service 0x85 and Re-ena	abling of ControlDTCSettings by calling
Pre-conditions		s connected to [ECU1] via TCP socket o ts on [ECU1] are initialized.	n DoIP-Port
Post-conditions	TCP connection betw	een [Diagnostic Tester] and [ECU1] is cl	osed.
Main Test Execution	ı		
Test Steps			Pass Criteria
Step 1	[Diagnostic Tester] Send Routing Activat type : Default(0x00).	ion Request (0x00005) with Activation	
Step 2	[DIAGApp01] Send Routing Activat	ion Response.	
Step 3	[Diagnostic Tester] Request for service (0xFFFFF.	x85 (ControlDTCSetting) 0x85 0x01	 [DIAGApp01] SetControlDtcStatusNotifier should be called after changing the ControlDTCSetting. [Diagnostic Tester] DM should send positive response as 0xC5 0x001.
Step 4	[DIAGApp01] Call GetControIDTCS	Status.	[DIAGApp01] GetControlDTCStatus should return DTC status as kDTCSettingOn.
Step 5	[Diagnostice Tester] Request for service (0xFFFFF.	x85 (ControlDTCSetting) 0x85 0x02	[DIAGApp01] SetControlDtcStatusNotifier should be called after changing the ControlDTCSetting.
Step 6	[DIAGApp01] Call GetControIDTCS	Status.	[DIAGApp01] GetControlDTCStatus should return DTC status as kDTCSettingOff.

 ∇

	\bigtriangleup	
Step 7	[DIAGApp01]	[DIAGApp01]
	Call EnableControlDtc.	SetControlDtcStatusNotifier should be called after changing the ControlDTCSetting.
Step 8	[DIAGApp01]	[DIAGApp01]
	Call GetControIDTCStatus.	GetControlDTCStatus should return DTC status as kDTCSettingOn.

6.2.11 [STS_DIAG_00011] Provide connection specific meta information to external service processors.

Test Objective	The diagnostic in AUTOSAR shall provide connection specific meta-information to the external service processor, which is processing the UDS service request. At least DoIP shall be supported and the meta-information shall contain Src-IP-Adr/Port and Target-IP-Adr/Port of the request. The meta-information should be designed, that it can later easily extended to also cover connection information of other network technologies (like CAN, Flexray).		
ID	STS_DIAG_00011	State	Draft
Affected Functional Cluster	Diagnostic		
Trace to RS Criteria	RS_Diag_04170		
Reference to Test Environment	STC_DIAG_00001		
Configuration	Diagnostics module:		
Parameters	1. Service instance for service ReadDataByIdentifier with DID <0x0001> is configured.		
	2. Service instance w	vith DID <0x0099> is NOT configured.	
Summary	Provides connection	specific meta-information to external serv	vice processors
Pre-conditions	- [Diagnostic Tester] i	s connected to [ECU1] via TCP socket or	n DoIP-Port
	- Software componer	ts on [ECU1] are initialized.	
Post-conditions	TCP connection betw	veen [Diagnostic Tester] and [ECU1] is clo	osed.
Main Test Execution	n		
Test Steps			Pass Criteria
Step 1	[Diagnostic Tester]		
	Send Routing Activat type : Default(0x00).	ion Request (0x00005) with Activation	
Step 2	[DIAGApp01]		
	Send Routing Activat	ion Response.	
Step 3	[Diagnostic Tester]		[DIAGApp01]
	Send UDS Request t	o query value of <int1></int1>	Application should receive the meta
	UDS-Service: ReadD	DataByIdentifier	information containing SA, TA, Source Port, Target Port, Target
	UDS-Payload: 0x22 .		Address Type, RequestHandle.
			[Diagnostic Tester]
			Positive response received (0x62). Payload of UDS response contains DID data with value of <int1>.</int1>

6.2.12 [STS_DIAG_00012] Event debounce counter shall be configurable.

Test Objective	Debounce counter sl fulfilled".	hould be frozen, when at leas	t one enable condition for the event is set to "not

7 Test configuration and test steps for Logging and Tracing

7.1 Test System

7.1.1 Test configurations

Configuration ID	STC_LT_00001	
Description	Standard Jenkins server for LT test	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the job with the LT Tester, is connected via Ethernet to [ECU1] hosting the System Test Application [LTApp01] and [ECU2] hosting the System Test Application [LTApp02]. The LT Tester opens TCP connections on port 3490 and receives log messages from the LT module.

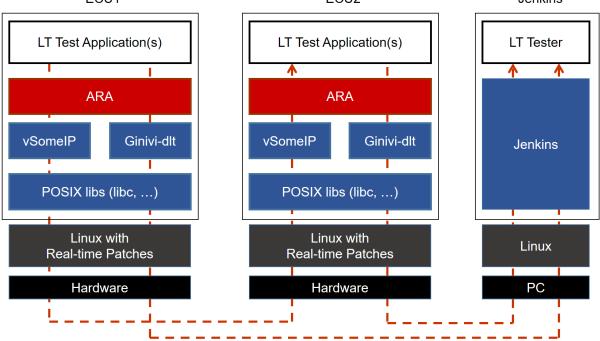

Figure 7.1: Illustration of test setup for Logging and Tracing.

7.2 Test cases

7.2.1 [STS_LT_00001] Receiving of log messages from LT module by external Tester and remote control of application's default log level.

Test Objective	Verification that all sent log messages from LT module are received by external Tester, that they carry the correct attributes like Application ID and ECU ID, and that the remote control of the application's default log level works.			
ID	STS_LT_00001 State Draft			
Affected Functional Cluster	Logging and Tracing			
Trace to RS Criteria	RS traceability will be	e added in next release		
Reference to Test Environment	STC_LT_00001 in Te	est configurations		
Configuration	- LT module in ECU1	is configured properly:		
Parameters	- ECU ID for ECU1 is	s set to ECU1		
	- [LTApp01] has LT A	pplication ID APPID1.		
	- Context ID for [LTA	op01] is set to CTX1		
Summary	from the Application Then the application	The LT Tester has to connect to the LT module, which has to receive and forward the log messages from the Application Layer. First, log messages on all log levels with correct attributes are expected. Then the applications default log level is consecutively lowered to more restrictive values and it is checked, whether the respective log messages disappear.		
Pre-conditions	[LT Tester] is connected to [ECU1] via TCP socket on Port 3490.			
	Software components on [ECU1] are initialized.			
	Video Provider's default log level is set to Verbose.			
Post-conditions	TCP connection between [LT Tester] and [ECU1] is closed.			
Main Test Execution	n			
Test Steps			Pass Criteria	
Step 1	[LT Tester] Receive log message	es with time-stamp.	Tester receives log messages every 0.5 seconds.	
	The messages are received for all levels in context with ID CTX1 and contain ECU ID ECU1, and Application ID APPID1.			
Step 2	[LT Tester]		Messages with log level Verbose are	
	Send request to query change of [LTApp01] default log level to Debug. no longer received. Messages with lower log level are still coming in w time-stamp.			
Step 3			Messages with log level Debug are no	
	Send request to query change of [LTApp01] default log level to Info. longer received. Messages with lower log level are still coming in with time-stamp.			
Step 4	[LT Tester]		Messages with log level Info are no	
	Send request to que to Warn.	ry change of [LTApp01] default log level	longer received. Messages with lower log level are still coming in with time-stamp.	

	<u>۱</u>
/	1

Step 5	[LT Tester] Send request to query change of [LTApp01] default log level to Error.	Messages with log level Warn are no longer received. Messages with lower log level are still coming in with time-stamp.
Step 6	[LT Tester] Send request to query change of [LTApp01] default log level to Fatal.	Messages with log level Error are no longer received. Messages with lower log level are still coming in with time-stamp.
Step 7	[LT Tester] Send request to query change of [LTApp01] default log level to Off.	No log messages are received.

7.2.2 [STS_LT_00002] Receiving of log messages from LT modules of several ECUs.

Test Objective	Verification that all log messages from multiple ECUs are received and that they carry the correct attributes like Application ID and ECU ID.				
ID	STS_LT_00002 State Draft				
Affected Functional Cluster	Logging and Tracing				
Trace to RS Criteria	RS traceability will be a	dded in next release			
Reference to Test Environment	STC_LT_00001 in Test configurations				
Configuration Parameters	 LT modules in both ECUs are configured properly. ECU ID for [ECU1] is set to ECU1 [LTApp01] has LT Application ID APPID1. Context ID for [LTApp01] is set to CTX1 ECU ID for [ECU2] is set to ECU2 [LTApp02] has LT Application ID APPID2. Context ID for [LTApp02] is set to CTX2 				
Summary	The LT Tester has to connect to the LT modules on the different ECUs. These have to receive and forward the log messages from the different applications in the Application Layers. First, log messages from [ECU1] on all log levels with correct attributes are expected. Then a connection to [ECU2] is established and additional messages with correct attributes are expected.				
Pre-conditions	- LT Tester is connected to [ECU1] via TCP socket on Port 3490.				
	- [LTApp01] default log level is set to Verbose.				
	- [LTApp02] default log level is set to Verbose.				
Post-conditions	TCP connections between Jenkins server and both ECUs are closed.				
Main Test Execution					
Test Steps	Pass Criteria				
Step 1	[LT Tester] Receive log messages.		Tester receives log messages every 0.5 seconds. The messages are received for all log levels in context with ID CTX1 and contain		
	ECU ID ECU1, and Application ID APPID1.				

	\bigtriangleup	
Step 2	[LT Tester]	Client connected.
	Second LT Client connects to [ECU2] on Port 3490 using TCP.	
Step 3	[LT Tester]	Messages from [ECU1] are still received every 0.5 seconds.
	Receive log messages	every 0.5 seconds.
		Tester additionally receives log messages from ECU2 every 0.5 seconds.
		The additional messages are received for log level Verbose in context with ID CTX2 and contain ECU ID ECU2, and Application ID APPID2.

7.2.3 [STS_LT_00003] Support of conversion function, get current active severity level by LT module

Test Objective	Verification that, LT module supports conversion function to get logged data in hexadecimal/binary format as a string. Verification that, LT module provides information of current severity level.			
ID	STS_LT_00003 State Draft			
Affected Functional Cluster	Logging and Tracing			
Trace to RS Criteria	RS traceability will be a	dded in next release		
Reference to Test Environment	STC_LT_00004 in Test	configurations		
Configuration	- LT modules on ECU1	is configured properly.		
Parameters	- ECU ID for [ECU1] is	set to ECU1		
	- [LTApp01] has LT App	lication ID APPID1.		
	- Context ID for [LTApp(01] is set to CTX1		
Summary	LT Tester connects to ECU1 to start validation of functionalities of LT module. LT tester queries LTAPP01 to get logged data in HEX/Binary format. LTAPP01 returns logged data into string with Hex/Binary representation. LT Tester queries LTAPP01 to check current log severity level.			
Pre-conditions	- LT Tester is connected to [ECU1] via TCP socket on Port 3490.			
	- [LTApp01] default log level is set to Verbose.			
Post-conditions	TCP connections between Jenkins server and both ECUs are closed.			
Main Test Execution				
Test Steps			Pass Criteria	
Step 1	[LT Tester]		Messages with log level	
	Send request to query log level to Debug/Warr	change of [LTApp01] default n/Info/Error.	Debug/Warn/Info/Error are received.	
Step 2	[LT Tester]			
	Send request to query hexadecimal format .	LTAPP01 log data in		
Step 3	[LTAPP01]		Log data provided as string in Hex	
	Prepare to send log dat representation.	ta as a string in hexadecimal		
Step 4	[LT Tester]			
	Send request to query	current log level.		

/	/

Step 5	[LTAPP01] Send current log level as Debug/Warn/Info/Error.	Log level response as Debug/Warn/Info/Error.
Step 6	[LT Tester] Get log data in string.	Log data provided as string in Hex
Step 7	[LT Tester] Send request to query LTAPP01 log data in binary format.	
Step 8	[LTAPP01] Prepare to send log data as a string in binary representation.	
Step 9	[LT Tester] Get log data in string.	Log data provided as string in binary.

8 Test configuration and test steps for Persistency

8.1 Test System

8.1.1 Test configurations

Configuration ID	STC_PER_00001	
Description	Standard Jenkins server for Persistency test	
ECU 1	Hardware, 192.168.7.12	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the job with the Persistency Tester is connected via Ethernet to ECU1 hosting the Persistency Test Application. The Persistency Tester is supposed to check the pass criteria.

The communication with the Persistency Test Application may take place over the Diagnostics functional cluster in form of diagnostic messages. The functionality of the Persistency Test Application described in the test steps may for example entirely be contained in routines that are implementation of subroutines of instances of the Diagnostic service RoutineControl. This service also provides a means to transport data from the Persistency Tester to the Persistency Test Application and vice versa.

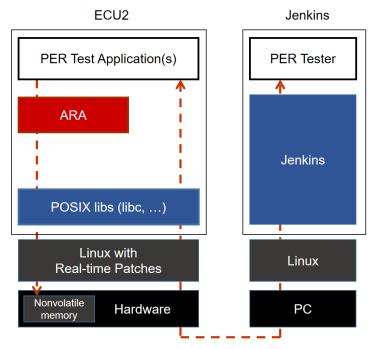

Figure 8.1: Illustration of test setup for Persistency.

8.2 Test cases

8.2.1 [STS_PER_00001] Storing an integer in a key-value database.

Test Objective	Verification, that integer data can be stored in a key-value database and that it can be retrieved again, using the associated key.						
ID	STS_PER_00001	State		Draft			
Affected Functional Cluster	Persistency						
Trace to RS Criteria	[RS_PER_00003], [RS_PER_00010]						
Reference to Test Environment	STC_PER_00001 in Test configurations						
Configuration Parameters	- File system contains an empty file for the key-value database.						
Summary	Integer data is stored in a key-value database. It is then retrieved again from the database using the associated key and the retrieved value is compared to the original one.						
Pre-conditions	- Persistency tester is connected to ECU1.						
	 Software components on ECU1 are initialized. File for key-value database opened successfully and the file should be empty 						
Post-conditions	TCP connection between Persistency Tester and ECU1 is closed.						
Main Test Execution							
Test Steps				Pass Criteria			
Step 1	[PERApp01]						
	Store integer <intdat database.<="" key-value="" th=""><th>a> with associated key <int< th=""><th>Key> in</th><th></th></int<></th></intdat>	a> with associated key <int< th=""><th>Key> in</th><th></th></int<>	Key> in

Step 2	[PERApp01]			
	Close file.			
Step 3	[PERApp01] File opened successfully.		File opened successfully.	
	Open file.			
Step 4	[PERApp01] Originally written string value			
	Retrieve string from file via file stream and store it in variable		retrieved.	
	<retstringdata>.</retstringdata>		And Values of <stringdata> (before it is encrypted) and <retstringdata> (after it is decrypted) are equal.</retstringdata></stringdata>	

9 Test configuration and test steps for Identity and Access Management

9.1 Test System

Identity and Access Management (IAM) requires each component to implement Policy Enforcement Point (PEP), which shall contact IAM to check access authorization of the requesting application.

System Test specification targets to check the PEP for Communication Management (FT-CM).

9.1.1 Test configurations

Configuration ID	STC_IAM_00001	
Description	Standard Jenkins server for Identity and Access Management test	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the job with the IAM Tester is connected via Ethernet to [ECU1] hosting the IAM Test Application (ITA).

The IAM Tester is supposed to check the pass criteria.

The communication with the ITA may take place over the Diagnostics functional cluster in form of diagnostic messages.

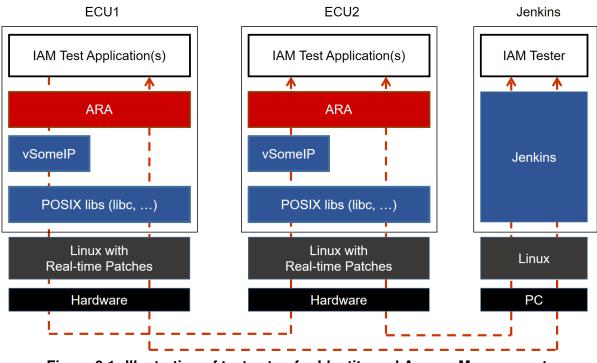

Figure 9.1: Illustration of test setup for Identity and Access Management.

9.2 Test cases

9.2.1 [STS_IAM_00001] Rejecting local service usage by an unauthorized application

Test Objective	Verification that unauthorized applications are not allowed to use services offered by another application.			
ID	STS_IAM_00001	State	Draft	
Affected Functional Cluster	Identity and Access I	Management

10 Test configuration and test steps for Update and Configuration Management

10.1 Test System

The Update and Configuration Management (UCM) is responsible for update / installation / uninstallation of an Adaptive Application, an Adaptive platform itself and its underlying Operating System. There could be two use cases, Diagnostic use case and Over The Air (OTA)use case. The System Test Specification checks the functionalities provided by UCM irrespective of the use cases mentioned earlier.

10.1.1 Test configurations

Configuration ID	STC_UCM_00001	
Description	Standard Jenkins server for Update and Configuration Management test	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server is running the job with the UCM Tester which is connected via Ethernet to the [ECU1] which is hosting the UCM Test Application.

The UCM Tester is supposed to check the pass criteria.

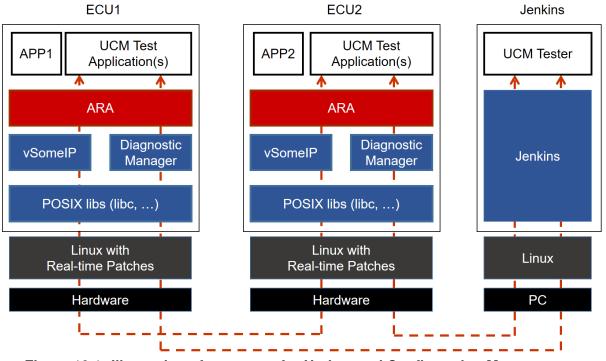

Figure 10.1: Illustration of test setup for Update and Configuration Management.

10.2 Test cases

10.2.1 [STS_UCM_00001] Check, if an update of a SW package is available.

Test Objective		that, an Update of a SW P an update is available.	ackage is availa	able on backend system and download
ID	STS_UCM_00001	State		Draft
Affected Functional Cluster	Update and Configuration Management			
Trace to RS Criteria	[RS_UCM_00010], [RS_UCM_00002], [RS_UCM_00013], [RS_UCM_00014]			
Reference to Test Environment	STC_UCM_00001 ir	n Test configurations		
Configuration	- [UCMApp01] is cor	nfigured.		
Parameters	- [Diagnostic module] is configured.		
Summary	backend system to c	heck if any updated are av ges to user. User then sele	ailable. If any u	e, UCMApp01 then queries to the pdates are available, present the list of a package and request UCMApp01 to
Pre-conditions	- UCM Tester is conr	nected to [ECU1].		
	- Software componer	nts on [ECU1] are initialize	d.	
	- [ECU1] is in Machir	ne State Parking.		
Post-conditions	- TCP connection be	tween UCM Tester and [E0	CU1] is closed.	
Main Test Execution	า			-
Test Steps				Pass Criteria
Step 1	[UCMTester]:			
	Send a request to [U and name from UCN	ICMApp01] to read current 1	SW version	
Step 2	[UCMApp01]:			
	Start the mechanism name from UCM	to query read current SW	version /	
Step 3	[UCMTester]:			Payload of response contains SW
	Receive response fro <ucm_swversion></ucm_swversion>	om [UCMApp01] and store	it in	version and name from UCM.
Step 4	[UCMTester]:			
	Send a request to [U and name from Back	ICMApp01] to read availab	e SW version	
Step 5	[UCMApp01]:			
	Start mechanism to	read all available SW Versi	on/Name list	
Step 6	[UCMTester]:			
	Receive response fro <backend_swversion< th=""><th>om [UCMApp01] and store on_List></th><th>it in</th><th></th></backend_swversion<>	om [UCMApp01] and store on_List>	it in	
Step 7	[UCMTester]:			
		ownload package <xyz> fro t received from backend sy</xyz>		
Step 8	[UCMApp01]:			Requested package is downloaded
	Start mechanism to o in the request.	download SW package as	per specified	successfully.

/	^
L	

Step 9	[UCMTester]:		
	Send a request to read list of downloaded SW Packages		
Step 10	[UCMApp01]:	Downloaded SW package list is	
	Start mechanism to provide list of downloaded SW packages	populated successfully	

10.2.2 [STS_UCM_00002] Update a SW package, on user request.

Test Objective	Verification that, a SW package is updated successfully on user request		
ID	STS_UCM_00002 State Draft		
Affected Functional Cluster	Update and Configuration Management		
Trace to RS Criteria	[RS_UCM_00011], [RS_UCM_00003], [RS_UCM_00023], [RS_UCM_00023], [RS_UCM_00021]	S_UCM_00017], [RS_UCM_00030],	
Reference to Test Environment	STC_UCM_00001 in Test configurations		
Configuration	- [UCMApp01] is configured.		
Parameters	- [Diagnostic module] is configured.		
Summary	- UCMApp01 intends to perform multiple SW package updates. It has multiple SW packages/Updates available with it. UCM supports atomic activation(i.e. After successful transfer of multiple SW packages ,activation of all the updates/SW packages can happen on a single command) User initiates multiple SW package updates. After successful update, UCMApp01 reads SW versions/name to verify that SW packages are updated successfully. If an update was not successful then it presents Failure to user.		
Pre-conditions	- UCM Tester is connected to [ECU1].		
	- Software components on [ECU1] are initialized.		
	- [ECU1] is in Machine State Parking.		
	- SW Package is downloaded and available locally to be updated.		
Post-conditions	- TCP connection between UCM Tester and [ECU1] is closed.		
Main Test Executio	n		
Test Steps		Pass Criteria	
Step 1	[UCMTester]:		
	Send request to check availability of resources for data transfer.		
Step 2	[UCMApp01]:	If result == success	
	Start mechanism to check availability of resources.		
Step 3	[UCMTester]:		
	Send request(Trigger from user) to update a SW package		
Step 4	[UCMApp01]:	Send an ACK message after successful initialization for performing an update.	
	Starts mechanism to initialize it for approval.		
Step 5	[UCMTester]:		
	Send request (user approval) to update a SW package as per Package manifest (SW Version and name)		
Step 6	[UCMApp01]:		
	Start mechanism to update a SW package.		

1	^
/	

		1
Step 7	[UCMTester]:	ACK from UCM after successful update of SW package
	Send a request to read progress status of an update.	
Step 8	[UCMApp01]:	
	Start mechanism to provide progress status of an update of SW package.	
Step 9	[UCMTester]:	
	Receive response of successful update of the package.	
Step 10	[UCMTester]:	
	Send request to get SW Cluster information	
Step 11	[UCMApp01]:	
	Start mechanism to provide SW Cluster information.	
Step 12	[UCMTester]:	SW Cluster information should be
	Receive response for SW Cluster information.	equal to the SW Cluster package that was requested to be updated.
Step 13	Repeat Steps 1 to 12, to update another SW package.	
Step 14	[UCMTester]:	
	Send request to Activate updated packages.	
Step 15	[UCMApp01]:	
	Start mechanism to check SW Package dependencies.	
Step 16	[UCMTester]:	
	Receive response of successful Activation	
Step 17	[UCMApp01]:	Persistent data is updated in kvs
	Read value of Persistent data associated with the SW package.	database by UCM as expected.
Step 18	[UCMTester]:	
	Send request (user approval)to update a SW package as per Package manifest (SW version and name)	
Step 19	[UCMApp01]:	
	Start mechanism to update a SW package	
Step 20	[UCMTester]:	
	Send request to read progress status of an Update.	
Step 21	[UCMTester]:	
	Start mechanism to provide progress status of an update of the SW package	
Step 22	[UCMTester]:	
	Receive response of unsuccessful update of the SW package.	
Step 23	[UCMTester]:	Persistent data is not updated in KVS
	Read value of Persistent data associated with the SW package.	database by UCM

10.2.3 [STS_UCM_00003] Installing a SW package on user approval.

Test Objective	Verification that, a SW package is installed successfully on user request.			
ID	STS_UCM_00003 State Draft			
Affected Functional Cluster	Update and Configuration Management			
Trace to RS Criteria	[RS_UCM_00011], [F	RS_UCM_00001], [RS_UCM_00013], [RS	S_UCM_00017]

Configuration	- [UCMApp01] is con	figured.		
Parameters	- [Diagnostic module]	is configured.		
Summary		SW package available which is to be insta W package to UCMApp01. UCMApp01 th		
Pre-conditions	- UCM Tester is conn	ected to [ECU1].		
	- Software componer	nts on [ECU1] are initialized.		
	- [ECU1] is in Machir	e State Parking.		
Post-conditions	• TCP connection between UCM Tester and [ECU1] is closed.			
Main Test Execution	n			
Test Steps	Pass Criteria			
Step 1	[UCMTester]:			
	Send request to check availability of resources for data transfer			
Step 2	[UCMApp01]: Result == success		Result == success	
	Start mechanism to check availability of resources and return Result based on availability of resource.			
Step 3	[UCMTester]:			
	Send request (user approval) to install a SW package as per Package manifest (SW Version/name).			
Step 4	[UCMApp01]:			
	Start mechanism to install a SW package and write/Store Persistent data associated with the SW package.			
Step 5	[UCMTester]:		ACK from UCM after successful	
	Response of success	sful installation of package	installation of SW package	
Step 6	[UCMTester]:		SW version/name received as	
	Send request to read current SW version/name response should be equal to the requested SW version to be installed		response should be equal to the requested SW version to be installed.	
Step 7	[UCMApp01]:		Persistent data read is as expected .	
	Read Persistent data associated with the installed SW package from KVS database			

10.2.4 [STS_UCM_00004] Uninstalling a SW package, on user request.

Test Objective	Verification that, a SW package is uninstalled successfully on user request.		
ID	STS_UCM_00004 State Draft		
Affected Functional Cluster	Update and Configuration Management		
Trace to RS Criteria	[RS_UCM_00004], [RS_UCM_00005], [RS_UCM_00018]		
Reference to Test Environment	STC_UCM_00001 in Test configurations		
Configuration Parameters	 [UCMApp01] is configured. [Diagnostic module] is configured. 		
Summary	UCMApp01 has the information about the SW package to be a approval for uninstallation of a SW package to UCMApp01. US SW package uninstallation.		
Pre-conditions	- UCM Tester is connected to [ECU1].		
	- Software components on [ECU1] are initialized.		
	- [ECU1] is in Machine State Parking.		
Post-conditions	- TCP connection between UCM Tester and [ECU1] is closed.		
Main Test Execution	n	•	
Test Steps		Pass Criteria	
Step 1	[UCMTester]:		
	nd request (Trigger from user) to uninstall a SW package I Persistent data associated with the SW package as per ckage manifest.		
Step 2	[UCMApp01]:		
	Start mechanism to uninstall a SW package.		
Step 3	[UCMTester]:	ACK from UCM after successful	
	Response of successful uninstallation of package	uninstallation of SW package	
Step 4	[UCMTester]:		
	Send request (Trigger from user) to uninstall a SW package as per package manifest		
Step 5	[UCMApp01]:		
	Start mechanism to uninstall a SW package		
Step 6	[UCMTester]:	NACK from UCM after unsuccessful	
	Response of unsuccessful installation of package	installation of SW package	
Step 7	[UCMApp01]:	Persistent data should be deleted /	
	Read Persistent data associated with the uninstalled SW package	not available	

10.2.5 [STS_UCM_00005] Rollback to previous version, after corrupted SW package installation.

Test Objective	Verification that, a SW package is rolled back to its previous version after corrupted SW package installation on an adaptive Platform		
ID	STS_UCM_00005 State Draft		
Affected Functional Cluster	Update and Configuration Management		
Trace to RS Criteria	[RS_UCM_00008], [I	RS_UCM_00001], [RS_UCM_00023]	
Reference to Test Environment	STC_UCM_00001 in	Test configurations	
Configuration	- [UCMApp01] is con	figured.	
Parameters	- [Diagnostic module]] is configured.	
Summary		UCMApp01 to update a SW package .U e corruption. UCMApp01 then queries U	Ipdate of SW package fails.UCM informs CM to roll back to the previous working
Pre-conditions	- UCM Tester is conr	nected to [ECU1].	
	- Software componer	nts on [ECU1] are initialized.	
	- [ECU1] is in Machir	ne State Parking.	
Post-conditions	- TCP connection be	tween UCM Tester and [ECU1] is closed	
Main Test Execution	n		1
Test Steps			Pass Criteria
Step 1	[UCMTester]:		
	Send request to insta manifest.	all a SW package as per Package	
Step 2	[UCMApp01]:		
	Start mechanism to install a SW package.		
Step 3	[UCMTester]:		
	Send request to get SW package installation status.		
Step 4	[UCMApp01]:		
	Start mechanism to g SW package.	get Installation status of a requested	
Step 5	[UCMTester]:		Installation status is received as Failed
	Receive response of	installation status.	
Step 6	[UCMTester]:		
	Send request to perform rollback to Previous SW version.		
Step 7	[UCMApp01]:		
	Start mechanism to r	ollback to Previous SW version	
Step 8	[UCMTester]:		NACK for unsuccessful Rollback
	•	unsuccessful Rollback	
Step 9	[UCMTester]:		
	Send Request to roll	back to previous SW package version.	
Step 10	[UCMApp01]:		
	Start mechanism to r	rollback to previous SW package	

 \triangle

Step 11	[UCMTester]:	ACK from UCM after successful
	Receive response of successful Rollback	rollback.

10.2.6 [STS_UCM_00006] Read update history on an adaptive platform, on demand.

Test Objective	Verification that, an update history of an adaptive platform is a	vailable and can be read, on demand.	
ID	STS_UCM_00006 State Draft		
Affected Functional Cluster	Update and Configuration Management		
Reference to Test Environment	STC_UCM_00001 in Test configurations		
Trace to RS Criteria	[RS_UCM_00032]		
Configuration	- [UCMApp01] is configured.		
Parameters	- [Diagnostic module] is configured.		
Summary	 UCMApp01 queries UCM to read Update history, UCM checks if update history is available or not. If available, it returns update information like last update time stamp, update on user approval/auto approved. 		
Pre-conditions	- UCM Tester is connected to [ECU1].		
	- Software components on [ECU1] are initialized.		
	- [ECU1] is in Machine State Parking.		
Post-conditions	- TCP connection between UCM Tester and [ECU1] is closed.		
Main Test Execution	n		
Test Steps		Pass Criteria	
Step 1	[UCMTester]:		
	Send request to read update history of an adaptive platform.		
Step 2	[UCMApp01]:	ACK from UCM	
	Start mechanism to read Update history of the platform.		
Step 3	[UCMTester]: Response from [UCMApp01] Receive response from UCMApp01 with update history data. regarding update history is received Update history may contain information like-Update version ,Tim stamp, Previous version ,AUTO updated ,User updated etc.		
Step 4	[UCMTester]:		
	Send request to read update history of an adaptive platform.		
Step 5	[UCMApp01]:	NACK from UCM	
	Start mechanism to read Update history of the platform.		
Step 6	[UCMTester]:	Response from [UCMApp01]	
	Receive response from UCMApp01 with no history data.	regarding update history is not available.	

10.2.7 [STS_UCM_00007]Data Transfer from Multiple clients, Simultaneously.

Test Objective	Verification to check that mut	iple clients can perform data trans	sfer of SW Packages ,simultaneously.
ID	STS_UCM_00007 State Draft		
Affected Functional Cluster	Update and Configuration Ma	anagement	
Reference to Test Environment	STC_UCM_00001 in Test co	nfigurations	
Trace to RS Criteria	[RS_UCM_00019]		
Configuration Parameters	 - [UCMApp01] is configured. - [UCMApp02] is configured. - [Diagnostic module] is configured. 		
Summary	 UCMApp01 starts data transfer of SW package 1. UCMApp02 also starts data trasfer of SW Package 2, simultaneously. UCM allows UCMApp01 /UCMApp02 to perform data Trasnfer, simultaneously. 		
Pre-conditions	 - UCM Tester is connected to [ECU1]. - Software components on [ECU1] are initialized. - [ECU1] is in Machine State Parking. 		
Post-conditions	- TCP connection between UCM Tester and [ECU1] is closed.		
Main Test Execution	1		
Test Steps			Pass Criteria
Step 1	[UCMTester]: Send request to UCMApp01	to transfer SW Package 1	
Step 2	[UCMApp01]: Start mechanism to prepare	for accepting SW Package 1	
Step 3	[UCMTester]: Send request to UCMApp02 Package 2	for data transfer of SW	
Step 4	[UCMApp02]: Start mechanism to prepare	for accepting SW Package 2	
Step 5	[UCMTester]: Send a request to get inform Package list	ation about transferred SW	
Step 6	[UCMApp01/UCMApp02]: Receive response of list of S ¹	N Packages transferred to UCM	SWPackageList = SW Package 1 ,SW Package 2

10.2.8 [STS_UCM_00008]Install/Update/Removal of SW Package from multiple clients, sequentially.

Test Objective	Verification to check that mutiple clients can perform Install/Update/Removal of SW packages, sequentially.	
ID	STS_UCM_00008 State Draft	

Affected	Update and Configuration Management		
Functional Cluster

	Send a request to read progress status of an update.			
Step 8	[UCMApp01]:	Current SW version/name should be		
	Start mechanism to provide progress status of an update of SW package.	equal to the SW version/name requested to be Updated		
Step 9	[UCMTester]: ACK from UCM a			
	Receive response of successful update of the SW package.	update of SW package		
Step 10	[UCMTester]:			
	Send request to Activate updated SW package.			
	∇			

/	/

a		
Step 11	[UCMApp01]:	
	Start mechanism to check SW Package dependencies.	
Step 12	[UCMTester]:	
	Receive response of successful Activation	
Step 13	[UCMTester]:	
	Send request (user approval) to update SW package as per Package manifest (SW version and name)	
Step 14	[UCMApp01]:	
	Start mechanism to update the SW package	
Step 15	[UCMTester]:	
	Send request to read progress status of an Update.	
Step 16	[UCMTester]:	
	Start mechanism to provide progress status of an update of the SW package	
Step 17	[UCMTester]:	
	Receive response of unsuccessful update of the SW package.	

10.2.12 [STS_UCM_00012] Validate SW manifest and report invalid SW manifest if found inconsistent.

Test Objective	Verification that, SW manifest received during a SW update is consistent. If it is found to be inconsitent then it should report manifest error.		
ID	STS_UCM_00012	State	Draft
Affected Functional Cluster	Update and Configuration Management		
Trace to RS Criteria	[RS_UCM_00012]		
Reference to Test Environment	STC_UCM_00001 in Test configurations		
Configuration	- [UCMApp01] is configured.		
Parameters	- [Diagnostic module] is configured.		
Summary	 Downloaded SW packages are available locally (with some discrepencies in the SW manifest). When UCM receives a command to install the SW package, UCM first checks consistency of the SW manifest. If there are discrepencies then it should report invalid manifest. 		
Pre-conditions	- UCM Tester is conr	nected to [ECU1].	
	- Software components on [ECU1] are initialized.		
	- [ECU1] is in Machine State Parking.		
	- SW Packages SW1 and SW2 is downloaded and available locally to be updated.		
	- SW1 is a SW package with consistent manifest, SW2 is a SW package with an inconsistent manifest.		
Post-conditions	- TCP connection between UCM Tester and [ECU1] is closed.

11 Test configuration and test steps for E2E Protection

11.1 Test System

11.1.1 Test configurations E2E Protection

Configuration ID	STC_E2E_00001
Description	Nominal AP Apps for E2E Protection
ECU 1	Hardware, 192.168.7.12
ECU 2	Hardware, 192.168.7.14
Jenkins	Jenkins Server, 192.168.7.10

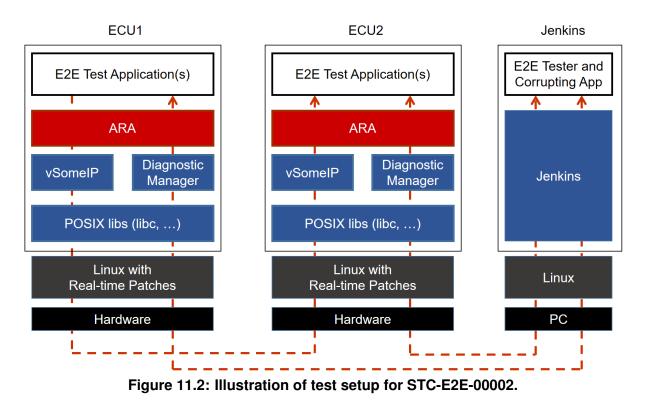

Configuration ID	STC_E2E_00002
Description	Nominal AP Apps for E2E Protection + Corrupting App Intervention
ECU 1	Hardware, 192.168.7.12
ECU 2	Hardware, 192.168.7.14
Jenkins	Jenkins Server, 192.168.7.10

System Tests for Adaptive Platform Demonstrator AUTOSAR AP R24-11

The Jenkins Server, running the job with the E2E protection test ([E2E Tester]) is connected via Ethernet to [ECU1] and [ECU2].

The [E2E Tester] is supposed to collect the results.

The communication between [E2E Tester] and the applications on ECU may take place over the Diagnostics functional cluster in form of diagnostic messages.

11.2 Test cases

11.2.1 [STS_E2E_00001] E2E Protection from AP to AP (Event Communication)

Test Objective	To verify that the E2E protection is done properly between applications in adaptive platforms				
ID	STS_E2E_00001	State	Draft		
Affected Functional Cluster	Safety				
Trace to RS Criteria	[RS_E2E_08539], [RS_E2E_08540], [RS_E2E_08543], [RS_E2E_08544]				
Reference to Test Environment	STC_E2E_00001 in Test configurations E2E Protection				
Configuration Parameters	 Event based communication. The existing communication services comprise the following (service & data names are arbitrary): [E2EService01]: Offered by [E2EApp01], requested by [E2EApp02]. <data1> is protected by E2E, sent by [E2EApp01] and received by [E2EApp02].</data1> 				
\bigtriangledown					

 \triangle

Summary	[E2EService01] is offered by [E2EApp01] on ECU1 and is requested by [E2EApp02] on ECU2.				
	[E2EApp01] sends <data1> to [E2EApp02] in a certain cycle time.</data1>				
	If it cannot be sent within a certain cycle time, E2E	will detect an error.			
Pre-conditions	- [E2E Tester] is connected to both ECUs.				
	- Both ECUs are in Machine State Off.				
	- [E2EApp01] and [E2EApp02] are shut down acco	rding to Machine State.			
Post-conditions	E2E Tester is disconnected to both ECUs.				
Main Test Execution					
Test Steps		Pass Criteria			
Step 1	[E2E Tester]				
	Request for change of Machine State to STS_E2E_00001 from E2E Tester.				
	Machine State for ECU1 and ECU2 are changed to STS_E2E_00001, and [E2EApp01] and [E2EApp02] are started up.				
Step 2	[E2EApp01]				
	Offer service [E2EService01].				
Step 3	[E2EApp02]				
	Request service [E2EService01].				
Step 4	[E2EApp01]				
	Send E2E protected <data1> with arbitrary values.</data1>				
	The length of <data1> is 4kbyte</data1>				
Step 5	[E2EApp02]	[E2EApp02] reads ProfileCheckStatus = Ok			
	Call GetProfileCheckStatus() for <data1>.</data1>				
Step 6	[E2EApp02]	[E2EApp02] receives correct value of <data1></data1>			
	Execute Update for <data1>.</data1>				
Step 7	Repeat setp4 to step6 for 10 times.	<data1> is always received with correct</data1>			
	Repeated in a certain cycle time.	values.			
	Every time length of <data1> is changed.</data1>	ProfileCheckStatus is always = OK except Step8			
Step 8	[E2EApp01]	[E2EApp02] reads ProfileCheckStatus =			
	Wait for more than cycle time.	NoNewData			
	<data1> is not sent once in 10 times within a certain cycle time.</data1>				

The following sequence diagram shows the schematic operation of STS_E2E_00001. (Note that not all test steps are represented exactly.)

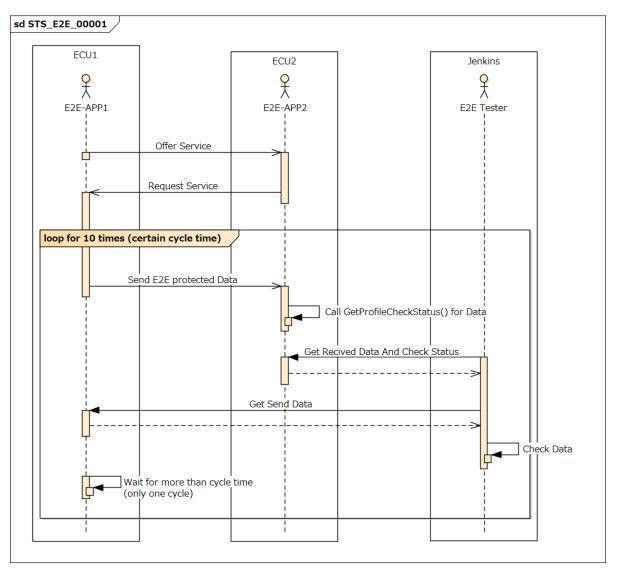

Figure 11.3: Sequence diagram of STS_E2E_00001.

11.2.2 [STS_E2E_00002] Corrupting App Affecting Communication

Test Objective	To verify that the Corrupting App to simulate a corrupted communication is detected by E2E				
ID	STS_E2E_00002	State	Draft		
Affected Functional Cluster	Safety

	- windowSizeValid is set to 2.		
	- windowSizeInvalid is set to 2.		
	- minOkStateInit is set to 1.		
	- maxErrorStateInit is set to 1.		
	- minOkStateValid is set to 1.		
	- maxErrorStateValid is set to 1.		
	- minOkStateInvalid is set to 1.		
	- maxErrorStateInvalid is set to 1.		
	- clearFromValidToInvalid is set to 0.		
	- Event based communication.		
	- The existing communication services comprise the	e following (service & data names are arbitrary):	
	- [E2EService01]: Offered by [E2EApp03], request	ed by [E2EApp04].	
	- <data1> is protected by E2E, sent by [E2EApp03</data1>	and received by [E2EApp04].	
	- [E2EDataCorrupter01] to send <data1>, with sim</data1>	ilar message format as sent by [E2EApp03]	
Summary	[E2EService01] is offered by [E2EApp03] on ECU1		
,	[E2EApp03] sends <data1> to [E2EApp04].</data1>		
	[E2EDataCorrupter01] sends the same communica	ation data sent by [E2EApp03], but it has	
	corrupted data.		
	[E2EApp04] detects the corrupted data thanks to the E2E protection.		
Pre-conditions	- [E2E Tester] is connected to both ECUs.		
	- Both ECUs are in Machine State Off.		
	- [E2EApp03] and [E2EApp04] are shut down according to Machine State.		
Post-conditions	E2E Tester is disconnected to both ECUs.		
Main Test Execution		1	
Test Steps		Pass Criteria	
Step 1	[E2E Tester]		
	Request for change of Machine State to STS_E2E_00002 from E2E Tester.		
	Machine State for ECU1 and ECU2 are changed to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up.		
Step 2	to STS_E2E_00002, and [E2EApp03] and		
Step 2	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up.		
	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up. [E2EApp03]		
Step 2 Step 3	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up. [E2EApp03] Offer service [E2EService01].		
	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up. [E2EApp03] Offer service [E2EService01]. [E2EApp04]		
Step 3	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up. [E2EApp03] Offer service [E2EService01]. [E2EApp04] Request service [E2EService01].		
Step 3	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up. [E2EApp03] Offer service [E2EService01]. [E2EApp04] Request service [E2EService01]. [E2EApp03] Send E2E protected <data1> twice with arbitrary</data1>	[E2EApp04]	
Step 3 Step 4	to STS_E2E_00002, and [E2EApp03] and [E2EApp04] are started up. [E2EApp03] Offer service [E2EService01]. [E2EApp04] Request service [E2EService01]. [E2EApp03] Send E2E protected <data1> twice with arbitrary values.</data1>	[E2EApp04] • reads ProfileCheckStatus = Ok	

value as last time.

Step 6	[E2EDataCorrupter01]	[E2EApp04]
	Send the same communication data as <data1> sent by [E2EApp03], but it has the corrupted</data1>	 reads ProfileCheckStatus = Error (CRC error)
	DataID field.	 reads SMState = Invalid
Step 7	[E2EApp03]	[E2EApp04]
	Send E2E protected <data1> with arbitrary</data1>	 reads ProfileCheckStatus = Ok
	values.	 reads SMState = Valid
Step 8	[E2EDataCorrupter01]	[E2EApp04]
	Send the same communication data as <data1> sent by [E2EApp03], but it has the corrupted</data1>	 reads ProfileCheckStatus = WrongSequence
	Counter field and the recalculated CRC field for <data1>.</data1>	 reads SMState = Valid
	(The Counter value which added maxDeltaCounter or more should be set.)	
Step 9	[E2EDataCorrupter01]	[E2EApp04]
	Send the same communication data as <data1> sent by [E2EApp03], but it has the same Counter</data1>	• reads ProfileCheckStatus = Repeated
	value as last time	 reads SMState = Invalid

The following sequence diagram shows the schematic operation of STS_E2E_00002. (Note that not all test steps are represented exactly.)

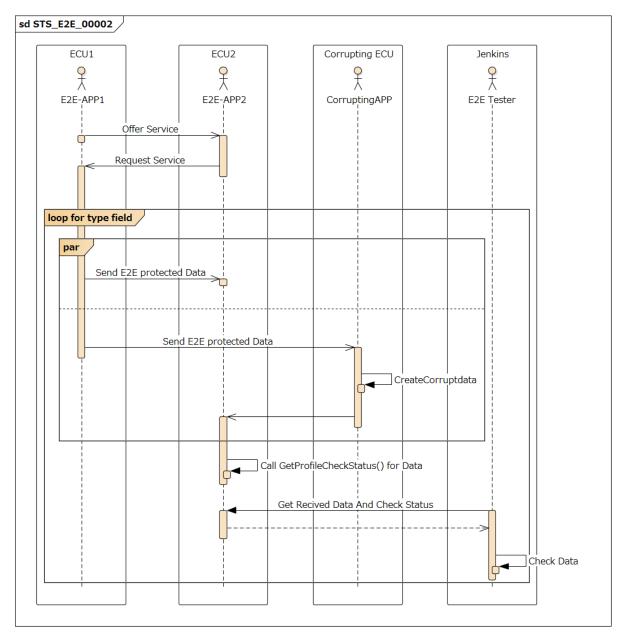

Figure 11.4: Sequence diagram of STS_E2E_00002.

12 Test configuration and test steps for Time Synchronization

12.1 Test System

12.1.1 Test configurations

Configuration ID	STC_TS_00001	
Description	Standard Jenkins server for Time Synchronization test	
ECU 1	Hardware, 192.168.7.12	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

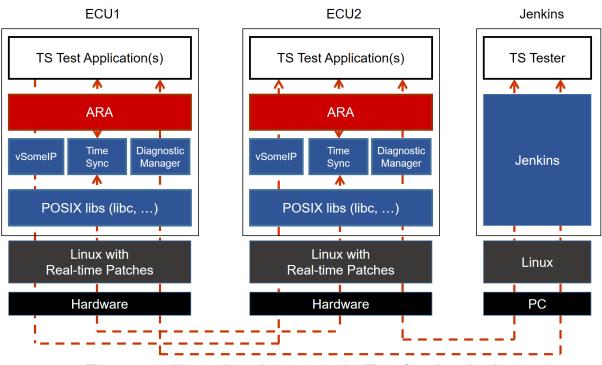

Figure 12.1: Illustration of test setup for Time Synchronization.

The Jenkins Server, running the job with the Time Synchronization test ([TS Tester]) is connected via Ethernet to [ECU1] hosting the System Test Application [TSApp01] and [ECU2] hosting the System Test Application [TSApp02].

The [TS Tester] is supposed to collect the results.

The communication between [TS Tester] and the applications on ECU may take place over the Diagnostics functional cluster in form of diagnostic messages.

12.2 Test cases

12.2.1 [STS_TS_00001] Check APIs of Offset Slave TimeBase (TB)

Test Objective	Verification that whether APIs of a Offset Slave TB can be used correctly.		
ID	STS_TS_00001 State Draft		
Affected Functional Cluster	Time Synchronization		
Trace to RS Criteria	[RS_TS_00005], [RS_TS_00012], [RS_TS_00013], [RS_TS_00017], [RS_TS_00021], [RS_TS_00026], [RS_TS_00030]		
Reference to Test Environment	STC_TS_00001 in Test configurations		
Configuration	- [ECU1] is synced by [ECU2].		
Parameters	- [ECU2] is Global Time Master.		
	- [ECU1] has a Offset Slave TB and a Synchronize	ed Slave TB.	
	- [ECU2] has a Offset Master TB and a Synchroniz	zed Master TB.	
	- The Synchronized Slave TB on [ECU1] is synced	by the Synchronized Master TB on [ECU2].	
	- The Offset Slave TB on [ECU1] depend on the S	ynchronized Slave TB on [ECU1],	
	- The Offset Master TB on [ECU2] depend on the	Synchronized Mater TB on [ECU2].	
Summary	Verification that [TSApp01] can use APIs of Offset	Slave TB.	
Pre-conditions	- [TS Tester] is connected to [ECU1].		
	- [ECU1] is in Machine State Parking.		
	- [TSApp01] is shut down according to Machine State.		
Post-conditions	[TS Tester] is disconnected to [ECU1].		
Main Test Execution			
Test Steps		Pass Criteria	
Step 1	[TS Tester]		
	Request for change of Machine State to Driving from Execution Manager.		
	Machine State for [ECU1] is changed to Driving, and [TSApp01] is started up.		
Step 2		The Offset Slave TB on [ECU1] is found	
Step 2	and [TSApp01] is started up.	The Offset Slave TB on [ECU1] is found successfully.	
Step 2 Step 3	and [TSApp01] is started up. [TSApp01]		
-	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1].		
-	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01]		
Step 3	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1].	successfully.	
Step 3	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1]. [TSApp01] Get rate deviation of the Offset Slave TB on	successfully.	
Step 3 Step 4	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1]. [TSApp01] Get rate deviation of the Offset Slave TB on [ECU1].	successfully. Rate deviation is got successfully.	
Step 3 Step 4	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1]. [TSApp01] Get rate deviation of the Offset Slave TB on [ECU1]. [TSApp01] Get Time Base Status of the Offset Slave TB on	successfully. Rate deviation is got successfully.	
Step 3 Step 4 Step 5	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1]. [TSApp01] Get rate deviation of the Offset Slave TB on [ECU1]. [TSApp01] Get Time Base Status of the Offset Slave TB on [ECU1].	successfully. Rate deviation is got successfully. Time Base Status is got successfully.	
Step 3 Step 4 Step 5	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1]. [TSApp01] Get rate deviation of the Offset Slave TB on [ECU1]. [TSApp01] Get Time Base Status of the Offset Slave TB on [ECU1]. [TSApp01]	successfully. Rate deviation is got successfully. Time Base Status is got successfully.	
Step 3 Step 4 Step 5 Step 6	and [TSApp01] is started up. [TSApp01] Find the Offset Slave TB on [ECU1]. [TSApp01] Configure the Offset Slave TB on [ECU1]. [TSApp01] Get rate deviation of the Offset Slave TB on [ECU1]. [TSApp01] Get Time Base Status of the Offset Slave TB on [ECU1]. [TSApp01] Get a getType of the Offset Slave TB on [ECU1].	successfully. Rate deviation is got successfully. Time Base Status is got successfully.	

\triangle

Step 8	[TSApp01] Offset value is the value set in Sternard Get Offset value of the Offset Slave TB on [ECU1].	
Step 9	[TSApp01] Current time is got successfully. Get current time of the Offset Slave TB on Current time is got successfully.	
Step 10	[ECU1]. [TSApp01] Start the timer of the Offset Slave TB on [ECU1]	
Step 11	so that the timer will expire at the specified time. [TSApp01] When time-up is notified. Get current time of the Offset Slave TB on [ECU1].	Current time is the specified time.

12.2.2 [STS_TS_00002] TimeSynchronization of applications between ECUs.

Test Objective	Verification that synchronization between the application on [ECU1] and [ECU2] can correctly be done.			
ID	STS_TS_00002 State Draft

Step 1 [TS Tester] Request for change of Machine State to Driving
from Execution Manager.
Machine State for [ECU1] and [ECU2] are changed to Driving, and [TSApp01] and [TSApp02] are started up.
Step 2 [TSApp01]
Offer service [TSService01].
Step 3 [TSApp02]
Request service [TSService01].
Step 4 [TSApp01] The Offset Slave TB on [ECU1] is found
Find the Offset Slave TB on [ECU1]. successfully.
Step 5 [TSApp01]
Configure the Offset Slave TB on [ECU1].
Step 6 [TSApp02] The Offset Master TB on [ECU2] is found
Find the Offset Master TB on [ECU2]. successfully.
Step 7 [TSApp02]
Configure the Offset Master TB on [ECU2].
Step 8 [TSApp01]
Get current time of the Offset Slave TB on [ECU1].
Step 9 [TSApp01]
Decide a future synchronization time based on the current time so that [TSApp01] and [TSApp02] will be notified simultaneously and sync then.
Step 10 [TSApp01]
Start the timer of the Offset Slave TB on [ECU1] so that the timer will expire at the synchronization time.
Step 11 [TSApp01]
Send the synchronization time to [TSApp02].
Step 12 [TSApp02]
Receive the synchronization time from [TSApp01].
Step 13 [TSApp02]
Get current time of the Offset Master TB on [ECU2].
Step 14 [TSApp02]
Start the timer of the Offset Master TB on [ECU2] so that the timer will expire at the synchronization time.
Step 15 [TSApp01][TSApp02]
Receive notify from the timer at the synchronization time.
Step 16 [TSApp01][TSApp02] Both current times are almost same.
Get the current time and store the current time.

Test Steps			Pass Criteria		

	
1	7

		1
Step 1	[TS Tester]	
	Request for change of Machine State to Driving from Execution Manager.	
	Machine State for [ECU1] and [ECU2] are	
	changed to Driving, and [TSApp01] and [TSApp02] are started up.	
Step 2	[TSApp02]	
	Offer service [TSService01].	
Step 3	[TSApp01]	
	Request service [TSService01].	
Step 4	[TSApp02]	The Offset Master TB on [ECU2] is found
	Find the Offset Master TB on [ECU2].	successfully.
Step 5	[TSApp01]	The Offset Slave TB on [ECU1] is found
	Find the Offset Slave TB on [ECU1].	successfully.
Step 6	[TSApp02]	
	Set User Data of the Offset Master TB on [ECU2].	
Step 7	[TSApp02]	Time Base Status is got successfully.
	Get Time Base Status of the Offset Master TB on [ECU2].	
Step 8	[TSApp02]	The value of User Data is the value set in
	Get User Data of Time Base Status of the Offset Master TB on [ECU2].	Step 6.
Step 9	[TSApp02]	
	Set a Global time of the Offset Master TB by API of <settime>.</settime>	
Step 10	[TSApp02]	Current time is approximately the value set in
	Get current time of the Offset Master TB on [ECU2].	step 9.
Step 11	[TSApp02]	
	The Global time set in step 9 and User data set	
	in step 6 is sent to [TSApp01] and wait until [TSApp01] has confirmed Global time and User	
	Data.	
Step 12	[TSApp01]	
	Receive a set Global time and User Data from [TSApp02].	
Step 13	[TSApp01]	Time Base Status is got successfully.
	Get Time Base Status of the Offset Slave TB on [ECU1].	
Step 14	[TSApp01]	The value of User Data is the value set in
	Get User Data of Time Base Status of the Offset Slave TB on [ECU1].	Step 6. User data is common value between Master TB on [ECU2] and Slave TB on [ECU1].
Step 15	[TSApp01]	Current time is approximately the value set in
	Get current time of the Offset Slave TB on [ECU1].	step 9.
Step 16	[TSApp02]	
	Set a Global time of the Offset Master TB by API of <updatetime>.</updatetime>	

\triangle

Step 17	[TSApp02] Get current time of the Offset Master TB on [ECU2].	Current time is approximately the value set in step 16.
Step 18	[TSApp02] The set Global time is sent to [TSApp01].	Both current times are almost same.
Step 19	[TSApp01] Receive a set global time from [TSApp02] and wait until Global Time on [ECU1] has been updated.	
Step 20	[TSApp01] Get current time of the Offset Slave TB on [ECU1].	Current time is approximately the value set in step 16.

13 Test configuration and test steps for Security Management

13.1 Test System

Security Management is responsible for aspects related to Secure Communication and Protected Runtime Environment.

The purpose of Secure Communication is to ensure message confidentiality, integrity and authentication. These capabilities are offered as a library to facilitate reusability.

Protected Runtime Environment ensures inter-process separation (spatial, time and resource) and protection against memory corruption attacks.

System Tests target to check successful communication of messages using secure channels, irrespective of underlying libraries and cypher suites.

13.1.1 Test configurations

Configuration ID	STC_SEC_00001
Description	Standard Jenkins server for Security test
ECU 1	Hardware, 192.168.7.12
ECU 2	Hardware, 192.168.7.14
Jenkins	Jenkins Server, 192.168.7.10

Jenkins Server, running the job with Security Tester is connected via Ethernet to [ECU1] hosting the Security Test Application (STA) and [ECU2].

[ECU1] sends the data to [ECU2]. Man-in-middle attack is performed through Jenkins Server.

The Security Tester is supposed to check pass criteria.

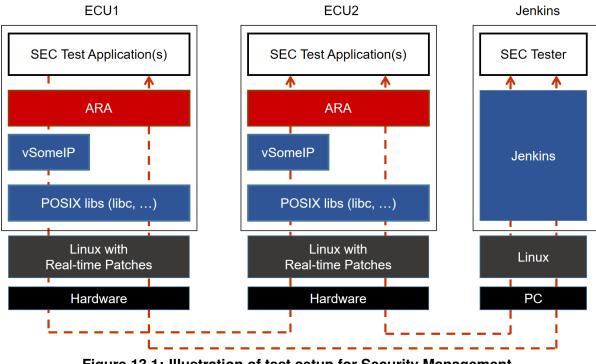

Figure 13.1: Illustration of test setup for Security Management.

13.2 Test cases for Secure Communication

13.2.1 [STS_SEC_00001] Message authentication

Test Objective	Verification that the messages from only authentic source are considered and replay attacks are prevented.		
ID	STS_SEC_00001	State	Draft
Affected Functional Cluster	Security		
Trace to RS Criteria	[RS_SEC_04001], [RS_SEC_04002], [RS_SEC_04003], [RS_SEC_04004]		
Reference to Test Environment	STC_SEC_00001 in Test configurations		
Configuration	- Secure channels and cypher suites are peoperly configured in the manifest.		
Parameters	- Secure channel configurations for the applications are provided by manifests.		
Summary	This test case aims to verify that		
	- Messages are securely transferred from sender [ECU1] to the receiver [ECU2]		
	- Messages are successfully authenticated and verified		
	- Any replay attacks are unsuccessful		
$\overline{\nabla}$			

\triangle			
Pre-conditions	- Security Tester is connected to [ECU1] and [ECU2]		
	- Software components on [ECU1] and [ECU2] are initialized		
	- Secure channel between [SECApp01] on [ECU1] and [SECA	pp02] on [ECU2] exists	
	- [ATTACKER] is configured on Jenkins to listen to the same p	ort as [SECApp02]	
Post-conditions	TCP connections between Security Tester and [ECU1] and [EC	CU2] is closed.	
Main Test Execution	n		
Test Steps	Pass Criteria		
Step 1	[SECApp01]		
	Create a payload "Hello World" and send using secure channel to [SECApp02]		
Step 2	[SECApp02]	Message authentication successful,	
	Receive message and try to authenticate	which means message received from [SECApp01]	
Step 3	[ATTACKER]		
	Perform replay attack by sending message "Hello World" to [SECApp02]		
Step 4	[SECApp02]	Message authentication fails which	
	Receive message and try to authenticate	means message was not sent by [SECApp01]. Message is discarded and replay attack is unsuccessful.	

13.2.2 [STS_SEC_00002] Message confidentiality and integrity

Test Objective	Verification that only authorized source can decrypt a message and the message integrity is maintained.			
ID	STS_SEC_00002	State	Draft	
Affected Functional Cluster	Security			
Trace to RS Criteria	[RS_SEC_04001], [RS_SEC_04002], [RS_SEC_04003], [RS_SEC_04004]			
Reference to Test Environment	STC_SEC_00001 in	STC_SEC_00001 in Test configurations		
Configuration	- Secure channels and cypher suites are peoperly configured in the manifest.			
Parameters	- Secure channel configurations for the applications are provided by manifests.			
Summary	This test case aims to verify that			
	 Messages are securely transferred from sender [ECU1] to the receiver [ECU2] Messages are successfully authenticated and verified 			
	- Decryption and tempering of message is unsuccessful			
Pre-conditions	- Security Tester is connected to [ECU1] and [ECU2]			
	- Software components on [ECU1] and [ECU2] are initialized			
	- Secure channel between [SECApp01] on [ECU1] and [SECApp02] on [ECU2] exists			
	- [ATTACKER] is configured on Jenkins to listen to the same port as [SECApp02]			
Post-conditions	TCP connections between Security Tester and [ECU1] and [ECU2] is closed.			
Main Test Execution				
Test Steps			Pass Criteria	

	、
/	/

Step 1	[SECApp01]	Message "Hello World" received by	
	Create a payload "Hello World" and send plain text to [TESTER]	[TESTĔR]	
Step 2	[SECApp01]	Encrypted messaged received by	
	Send the same payload using secure channel to [SECApp02]	[SECApp02]	
Step 3	[SECApp02]	Message authentication successful,	
	Authenticate the messaged received from [SECApp01]	which means message received from [SECApp01]	
Step 4	[SECApp02]	Message decrypted as "Hello World".	
	Decrypt message from [SECApp01]	Message integrity is proved.	
Step 5	[SECApp02]	"Hello World" received by [TESTER]	
	Send decrypted message to [TESTER]	and is stored for further comparison	
Step 6	[ATTACKER]	Encrypted message received by	
	Sniff the message sent over secure channel from [SECApp01] to [SECApp02]	[ATTACKER]	
Step 7	[ATTACKER]	Decryption attempt unsuccessful.	
	Try to decrypt message sniffed earlier	Message confidentiality is proven.	
Step 8	[ATTACKER]	Message received by [TESTER] and is stored for further comparison	
	If the decryption was successful (by guessing the key or if encryption was weak), then send decrypted message to [TESTER], else send sniffed (encrypted) message to [TESTER]		
Step 9	[TESTER]	Both messages are exactly same.	
	Compare plain text from [SECApp01] and decrypted message from [SECApp02]	Message integrity is proved.	
Step 10	[TESTER]	Both messages are different.	
	Compare plain text from [SECApp01] and encrypted/ decrypted message from [ATTACKER]	Message confidentiality is proved.	

14 Test configuration and test steps for Network Management

14.1 Test System

14.1.1 Test configurations NM

Configuration ID	STC_NM_00001
Description	Scenario 1 - All ECUs are in the same NM Cluster
ECU 1	Hardware, 192.168.7.12
ECU 2	Hardware, 192.168.7.14
ECU 3	Hardware, 192.168.7.16
Jenkins	Jenkins Server, 192.168.7.10

Configuration ID	STC_NM_00002
Description	Scenario 2 - only ECU2 is in the NM cluster
ECU 1	Hardware, 192.168.7.12
ECU 2	Hardware, 192.168.7.14
ECU 3	Hardware, 192.168.7.16
Jenkins	Jenkins Server, 192.168.7.10

The Jenkins Server, running the job with the Network Management test [NM TESTER] is connected via Ethernet to [ECU1] hosting the NM Test Application [NMApp01], [ECU2] hosting the NM Test Application [NMApp02] and [ECU3] hosting the NM Test Application [NMApp03].

The [NM Tester] is supposed to collect the results by checking multicast messages.

The communication between [NM Tester] and the applications on the ECU may take place over the Diagnostics functional cluster in form of diagnostic messages.

System Tests for Adaptive Platform Demonstrator AUTOSAR AP R24-11

14.2 Test cases Network Management

14.2.1 [STS_NM_00001] Basic Network Management functionality of ECUs in same NM Cluster.

Test Objective	To verify that the Basic Network Management functionality of ECUs in same NM Cluster works.		
ID	STS_NM_00001	State	Draft
Affected Functional Cluster	NM		
Trace to RS Criteria	[RS_Nm_00044], [RS_Nm_0004	7], [RS_Nm_00048], [RS_Nm_000	050], [RS_Nm_00054]
Reference to Test Environment	STC_NM_00001 in Test configurations NM		
Configuration Parameters	NM configuration parameters are configured		
Summary	Initially all three ECUs are in inactive state.		
	Machine state of [ECU2] is changed to Driving.		
	[ECU2] sends multicast NM messages periodically which is received by [ECU1] and [ECU3]		
	and due to this [ECU1] and [ECU3] become active.		
	Network change its mode from Bus sleep mode to Network Mode.		
	[ECU2] stops sending NM messages and becomes inactive.		
	[ECU1] and [ECU3] does not receive NM messages for a time <t> and [ECU1] becomes inactive.</t>		
	Network transitions its modes as per configured timeouts.		
$\overline{\nabla}$			

	\bigtriangleup		
Pre-conditions	- [NM Tester] is connected to all ECUs.		
	- All ECUs are in Machine State Parking.		
	- Applications are shut down according to Machine State.		
Post-conditions	TCP connections between [NM Tester] and all ECUs are closed.		
Main Test Execution	1		
Test Steps		Pass Criteria	
Step 1	[NM TESTER] Check Network Current State.	Field Network- State.NetworkCurrentState is set to false.	
Step 2	[NM TESTER] Request the change of Machine State to Driving for ECU2.	Machine State for ECU2 is changed to Driving.	
Step 3	[NMApp02] Request NM to send multicast messages.		
Step 4	[NM TESTER] Check NM multicast messages	Multicast messages are received with source node ID of [ECU2] with logical network information bit set to 1.	
		[ECU1] and [ECU3] become awake.	
		Network enters into Network Mode (Repeat Message State).	
Step 5	[NM TESTER] Check NM multicast messages after <repeat message="" timer=""> expired</repeat>	Network enters into Network Mode (Normal Operation State).	
Step 6	[NM TESTER] Check Network Current State.	Field Network- State.NetworkCurrentState is set to true.	
Step 7	[NM TESTER] Check NM multicast messages after <nm-timeout timer=""> if all ECUs are still awake</nm-timeout>	Multicast messages are received with source node ID of [ECU2]	
		[ECU1] and [ECU3] are awake.	
Step 8	[NMApp02] Indicate NM to release the network to stop sending multicast message.		
Step 9	[NM TESTER] Check NM multicast messages.	Multicast messages are not received with source node ID of [ECU2] and Network goes to Ready Sleep state	
Step 10	[NM TESTER] Check NM multicast messages after NM Timout timer <t></t>	Network goes to Prepare Bus sleep Mode.	
Step 11	[NM TESTER] Check NM multicast messages after wait bus sleep timer <t></t>	Network goes to Bus sleep Mode.	
Step 12	[NM TESTER] Check Network Current State.	Field Network- State.NetworkCurrentState is set to false.	

14.2.2 [STS_NM_00002] Basic Network Management functionality of ECUs not in same partial network Cluster.

Test Objective	To verify that the Basic Network Management functionality of ECUs not in same partial network Cluster works.			
ID	STS_NM_00002	State	Draft

15 Test configuration and test steps for Cryptography

15.1 Test System

15.1.1 Test configurations

Configuration ID	STC_CRYPTO_00001	
Description	Standard Jenkins server for Cryptography test	
ECU 1	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

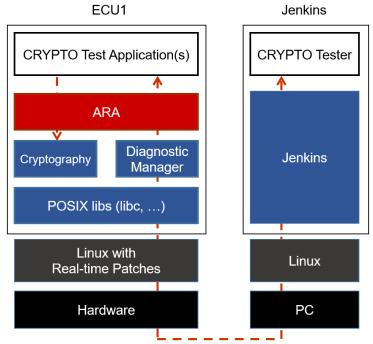

Figure 15.1: Illustration of test setup for Cryptography.

The Jenkins Server, running the job with the Cryptography test ([CRYPTO Tester]) is connected via Ethernet to [ECU1] hosting the CRYPTO Test Applications [CRYP-TOApp01].

The [CRYPTO Tester] is supposed to check the pass criteria.

The communication between [CRYPTO Tester] and the [CRYPTOApp01] may take place over the Diagnostics functional cluster in form of diagnostic messages.

15.2 Test cases

15.2.1 [STS_CRYPTO_00001] Encrypting and decrypting data using an algorithm for symmetric encryption/decryption primitives.

Test Objective	Verify that Crypto Stack	correctly encrypts and dec	crypts data using symmetric key.
ID	STS_CRYPTO_00001	State	Draft
Affected Functional Cluster	Cryptography		
Trace to RS Criteria	[RS_CRYPTO_02001], [RS_CRYPTO_02008], [RS_CRYPTO_02201], [RS_CRYPTO_02302]		
Reference to Test Environment	STC_CRYPTO_00001 in Test configurations		
Configuration Parameters	 Provide key for symmetric encryption/decryption. Allow use of symmetric key for encryption and decryption by [CRYPTOApp01]. 		
Summary	[CRYPTO Tester] sends <plaintext1> to [CRYPTOApp01] and is encrypted on the [CRYPTOApp01] side using symmetric key <sk1> to obtain <ciphertext1'>. <ciphertext1'> is compared with <ciphertext1> which is generated in the same way on the [CRYPTO Tester] side.</ciphertext1></ciphertext1'></ciphertext1'></sk1></plaintext1>		
	[CRYPTOApp01] side to		OApp01] and is decrypted on the [CRYPTO Tester] side.
	 Data encryption/decryption on the [CRYPTO Tester] side is performed either prior to running test or during a test step. Whether to compare encryption/decryption result (<ciphertext1'> and <plaintext2'>) in [CRYPTOApp01] or [CRYPTO Tester] is up to implementer.</plaintext2'></ciphertext1'> 		
Pre-conditions	- Crypto stack and [CRYPTOApp01] are initialized with used key (<sk1>), algorithm, and domain parameter as applicable.</sk1>		
	 Communication between [CRYPTO Tester] and [CRYPTOApp01] has been set up. Symmetric key <sk1> can be accessed by [CRYPTOApp01].</sk1> 		
Post-conditions	Communication between [CRYPTO Tester] and [CRYPTOApp01] is closed.		
Main Test Execution			
Test Steps			Pass Criteria
Step 1	[CRYPTO Tester]		
	Send <plaintext1> to [C</plaintext1>	RYPTOApp01].

	Return verification status of <rcert1>-<eecert1> chain and statuses of <rcert1> and <eecert1> to [CRYPTO Tester].</eecert1></rcert1></eecert1></rcert1>	
Step 22	[CRYPTO Tester]	[CRYPTO Tester]
	Check verification status of <rcert1>-<eecert1> chain and statuses of <rcert1> and <eecert1>.</eecert1></rcert1></eecert1></rcert1>	Verification status of <rcert1>-<eecert1> chain is "kNoTrust", statuses of <rcert1> and <eecert1> are "kValid" and "kNoTrust", respectively.</eecert1></rcert1></eecert1></rcert1>
		NOTE: The API VerifyCertChain updates status of <eecert1> to "kNoTrust" because <imcert1> referenced by <eecert1> is missing on the [CRYPTOApp01] side.</eecert1></imcert1></eecert1>
Step 23	[CRYPTO Tester]	
	Trigger importing <eecert1> to (non-)volatile storage.</eecert1>	
Step 24	[CRYPTOApp01]	
	Import <eecert1> to (non-)volatile storage.</eecert1>	
Step 25	[CRYPTOApp01]	
	Return status (success/failure) of importing <eecert1> to [CRYPTO Tester].</eecert1>	
Step 26	[CRYPTO Tester]	[CRYPTO Tester]
	Check status of importing <eecert1>.</eecert1>	Status contains success and no error.

Ζ

Step 27	[CRYPTO Tester]	
	Trigger parsing <imcert1> by sending <imcert1> to [CRYPTOApp01].</imcert1></imcert1>	
Step 28	[CRYPTOApp01]	
	Parse <imcert1>.</imcert1>	
Step 29	[CRYPTOApp01]	
	Return status (success/failure) of parsing <imcert1> to [CRYPTO Tester].</imcert1>	
Step 30	[CRYPTO Tester]	[CRYPTO Tester]
	Check status of parsing <imcert1>.</imcert1>	Status contains success and no error.
Step 31	[CRYPTO Tester]	
	Send trigger of verifying <rcert1>-<imcert1>-<eecert1> certificate chain to [CRYPTOApp01].</eecert1></imcert1></rcert1>	
Step 32	[CRYPTOApp01]	
	Verify <rcert1>-<imcert1>-<eecert1> certificate chain.</eecert1></imcert1></rcert1>	
Step 33	[CRYPTOApp01]	
	Return verification status of <rcert1>-<imcert1>-<eecert1> certificate chain to [CRYPTO Tester].</eecert1></imcert1></rcert1>	
Step 34	[CRYPTO Tester]	[CRYPTO Tester]
	Check verification status of certificate chain.	Verification status of certificate chain is "kValid."
Step 35	[CRYPTO Tester]	
	Trigger loading and exporting <eecert1> from (non-)volatile storage.</eecert1>	
Step 36	[CRYPTOApp01]	
	Load and export <eecert1> from (non-)volatile storage.</eecert1>	
Step 37	[CRYPTOApp01]	
	Return < EECERT1 > to [CRYPTO Tester].	
Step 38	[CRYPTO Tester]	[CRYPTO Tester]
	Verify <eecert1> using <tpbk1> retrieved from <eecert1>.</eecert1></tpbk1></eecert1>	<eecert1> is valid.</eecert1>
Step 39	[CRYPTO Tester]	
	Send trigger of removing <eecert1> to [CRYPTOApp01].</eecert1>	
Step 40	[CRYPTOApp01]	
	Remove <eecert1> from (non-)volatile storage.</eecert1>	
Step 41	[CRYPTOApp01]	
	Return status (success/failure) of removing <eecert1> to [CRYPTO Tester].</eecert1>	
Step 42	[CRYPTO Tester]	[CRYPTO Tester]
	Check status of removing <eecert1>.</eecert1>	Status contains success and no error.
Step 43	[CRYPTO Tester]	
	Trigger loading <eecert1> from (non-)volatile storage .</eecert1>	

Step 44	[CRYPTOApp01]	
	Load <eecert1> from (non-)volatile storage.</eecert1>	
Step 45	[CRYPTOApp01]	
	Return pointer value of <eecert1> to [CRYPTO Tester].</eecert1>	
Step 46	[CRYPTO Tester]	[CRYPTO Tester]
	Check pointer value of <eecert1>.</eecert1>	Pointer value of <eecert1> is nullptr.</eecert1>

Figure 15.13: Sequence diagram of STS_CRYPTO_00014.

15.2.15 [STS_CRYPTO_00015] Encryption and decryption of randomly ac-cessed data using "counter mode" stream cipher.

Test Objective	Verify that Crypto Stack correctly encrypts and decrypts randomly accessed data using "counter mode" stream cipher.	
ID	STS_CRYPTO_00015 State	Draft
Affected Functional Cluster	Cryptography	
Trace to RS Criteria	[RS_CRYPTO_02304], [RS_CRYPTO_02001], [RS [RS_CRYPTO_02201], [RS_CRYPTO_02302]	6_CRYPTO_02008], [RS_CRYPTO_02115],
Reference to Test Environment	STC_CRYPTO_00001 in Test configurations	
Configuration Parameters	 Configure [CRYPTO Tester] and [CRYPTOApp01] to have a common symmetric key <sk1> for symmetric "counter mode" encryption/decryption.</sk1> 	
	- Configure [CRYPTO Tester] to have plaintext data than two encryption blocks.	a <plaintext1> and <plaintext2> which are larger</plaintext2></plaintext1>
	- Configure [CRYPTO Tester] to have ciphertext dat larger than two decryption blocks.	ta <ciphertext1> and <ciphertext2> which are</ciphertext2></ciphertext1>
Summary	[CRYPTO Tester] sends <plaintext1> and <offset1> to [CRYPTOApp01], and [CRYPTOApp01] encrypts one encryption block in <plaintext1> starting from <offset1> using symmetric key <sk1>. [CRYPTO Tester] sends <offset2> to [CRYPTOApp01], and [CRYPTOApp01] advances encryption postion in <plaintext1> and state of stream cipher context by <offset2>. [CRYPTO Tester] triggers the rest of the encryption, and [CRYPTOApp01] continues encryption up to the end of <plaintext1> to obtain <ciphertext1'>. <ciphertext1'> is compared with <ciphertext1> which is generated in the same way on the [CRYPTO Tester] side.</ciphertext1></ciphertext1'></ciphertext1'></plaintext1></offset2></plaintext1></offset2></sk1></offset1></plaintext1></offset1></plaintext1>	
	Decryption is tested in similar way as above described encryption.	
	 Value of <offset1> and <offset2> are signed integers, multiple of encryption/decryption block size, and chosen within range of <plaintext1>/<ciphertext1>.</ciphertext1></plaintext1></offset2></offset1> Data encryption/decryption on the [CRYPTO Tester] side is performed either prior to running test or during a test step. Whether to compare encryption/decryption result (<ciphertext1> and <plaintext2>) in [CRYPTO Tester] is up to implementer.</plaintext2></ciphertext1> 	
Pre-conditions	- Crypto stack and [CRYPTOApp01] are initialized with used key (<sk1>), algorithm, and domain parameter as applicable.</sk1>	
	- Communication between [CRYPTO Tester] and [CRYPTOApp01] has been set up.	
	- Symmetric key <sk1> can be accessed by [CRYPTOApp01].</sk1>	
Post-conditions	Communication between [CRYPTO Tester] and [CF	RYPTOApp01] is closed.
Main Test Execution		
Test Steps		Pass Criteria
Step 1	[CRYPTO Tester]	
	Trigger encryption of <plaintext1> by sending <plaintext1> and <offset1> to [CRYPTOApp01].</offset1></plaintext1></plaintext1>	
Step 2	[CRYPTOApp01]	
	Encrypt one encryption block in <plaintext1> starting from <offset1> using <sk1>.</sk1></offset1></plaintext1>	
Step 3	[CRYPTOApp01]	
	Return encryption status (success/failure) to [CRYPTO Tester].	
Step 4	[CRYPTO Tester]	[CRYPTO Tester]
	Check encryption status.	Encryption status contains success and no error.

•
1

Step 5	[CRYPTO Tester]	
	Trigger "seeking" encryption position of <plaintext1> by sending <offset2> to [CRYPTOApp01].</offset2></plaintext1>	
Step 6	[CRYPTOApp01]	
	Seek encryption position of <plaintext1> and state of stream cipher context by <offset2>.</offset2></plaintext1>	
Step 7	[CRYPTOApp01]	
	Return seek status (success/failure) to [CRYPTO Tester].	
Step 8	[CRYPTO Tester]	[CRYPTO Tester]
	Check seek status.	Seek status contains success and no error.
Step 9	[CRYPTO Tester]	
	Trigger remaining encryption of <plaintext1>.</plaintext1>	
Step 10	[CRYPTOApp01]	
	Resume and complete encryption of <plaintext1> to obtain <ciphertext1'>.</ciphertext1'></plaintext1>	
Step 11	[CRYPTOApp01]	
	Return encryption status (success/failure) to [CRYPTO Tester].	
Step 12	[CRYPTO Tester]	[CRYPTO Tester]
	Check encryption status.	Encryption status contains success and no error.
Step 13	[CRYPTO Tester]	
	Send <ciphertext1> (created in the same way as <ciphertext1'> on the [CRYPTO Tester] side) to [CRYPTOApp01] for comparison.</ciphertext1'></ciphertext1>	
Step 14	[CRYPTOApp01]	
	Compare <ciphertext1'> with <ciphertext1>.</ciphertext1></ciphertext1'>	
Step 15	[CRYPTOApp01]	
	Return comparison result (matched/unmatched) to [CRYPTO Tester].	
Step 16	[CRYPTO Tester]	[CRYPTO Tester]
	Check comparison result.	Comparison result is "matched."
Step 17	[CRYPTO Tester]	
	Trigger decryption of <ciphertext2> by sending <ciphertext2> and <offset1> to [CRYPTOApp01].</offset1></ciphertext2></ciphertext2>	
Step 18	[CRYPTOApp01]	
	Decrypt one decryption block in <ciphertext2> starting from <offset1> using <sk1>.</sk1></offset1></ciphertext2>	
Step 19	[CRYPTOApp01]	
	Return decryption status (success/failure) to [CRYPTO Tester].	
Step 20	[CRYPTO Tester]	[CRYPTO Tester]
	Check decryption status.	Decryption status contains success and no error.

Step 21	[CRYPTO Tester]	
	Trigger "seeking" decryption position of <ciphertext2> by sending <offset2> to [CRYPTOApp01].</offset2></ciphertext2>	
Step 22	[CRYPTOApp01]	
	Seek decryption position of <ciphertext2> and state of stream cipher context by <offset2>.</offset2></ciphertext2>	
Step 23	[CRYPTOApp01]	
	Return seek status (success/failure) to [CRYPTO Tester].	
Step 24	[CRYPTO Tester]	[CRYPTO Tester]
	Check seek status.	Seek status contains success and no error.
Step 25	[CRYPTO Tester]	
	Trigger remaining decryption of <ciphertext2>.</ciphertext2>	
Step 26	[CRYPTOApp01]	
	Resume and complete decryption of <ciphertext2> to obtain <plaintext2'>.</plaintext2'></ciphertext2>	
Step 27	[CRYPTOApp01]	
	Return decryption status (success/failure) to [CRYPTO Tester].	
Step 28	[CRYPTO Tester]	[CRYPTO Tester]
	Check decryption status.	Decryption status contains success and no error.
Step 29	[CRYPTO Tester]	
	Send <plaintext2> (created in the same way as <plaintext2'> on the [CRYPTO Tester] side) to [CRYPTOApp01] for comparison.</plaintext2'></plaintext2>	
Step 30	[CRYPTOApp01]	
	Compare <plaintext2'> with <plaintext2>.</plaintext2></plaintext2'>	
Step 31	[CRYPTOApp01]	
	Return comparison result (matched/unmatched) to [CRYPTO Tester].	
Step 32	[CRYPTO Tester]	[CRYPTO Tester]
	Check comparison result.	Comparison result is "matched."

16 Test configuration and test steps for Platform Health Management

16.1 Test System

16.1.1 Test configurations of Health Monitoring

Configuration ID	STC_PHM_00001	
Description	Standard Jenkins server for PHM Management test	
ECU 2	Hardware, 192.168.7.12	
Jenkins	Jenkins Server, 192.168.7.10	

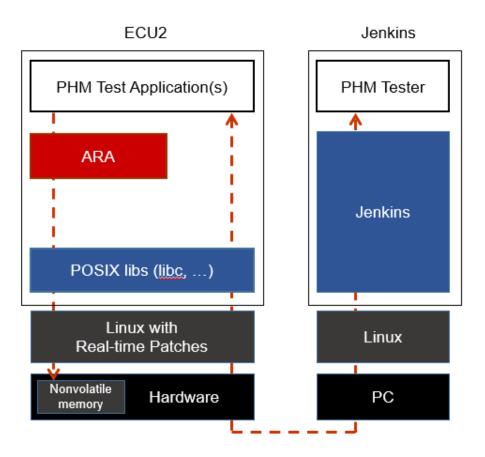

Figure 16.1: Illustration of test setup for STC-PHM-00001.

The Jenkins Server, running the job with the PHM Management test (PHM Tester) isconnected via Ethernet to ECU1 hosting the System Test Applications [PHMApp01], [PHMApp02], [PHMApp03], [PHMAppCheck].

Each application runs the corresponding supervised entities 1, 2 and 3.

The PHM Tester is supposed to check the pass criteria.

The communication between PHM Tester and the applications on the ECU may take place over the SE functional cluster in form of Application and Services messages.

16.2 Test cases

16.2.1 [STS_HM_00001] HM Performing Alive Supervision

Test Objective	Verification that the PHM management functional cluster can perform Alive Supervision and do the		
	configured recovery acti		Dut
ID Affected Expedience	STS_HM_00001 PHM	State	Draft
Affected Functional Cluster	PHM		
Trace to RS Criteria	[RS_HM_09125]

	-ExpiredSupervisionCyc ExpiredSupervisionCycl		pervisionC yclesTolerance2,
	-ApplicationRecoveryAc	tion is <reset process<="" th="" the=""><th>></th></reset>	>
	- Configured Manifest w	ith Platform Health manage	ement
	- Machine state shall be Driving, in which all System Test Applications shall start.		
Summary	-Health Monitoring shall examine the alive supervision of 3 cyclic supervised entities. They shall report their checkpoints at the proper timing, within the configured margins.		
	-Then after enough time, application [PHMApp02] shall miss some checkpoints reporting, yet it was for a short time, that the supervised entity went to failed state but not expired.		
	-Then after another enough time, the application [PHMApp 03] shall miss some checkpoints reporting, to the extent that the supervised entity went to expired, leading to process reset.		
Pre-conditions	- PHM Tester is connected to ECU via TCP.		
	- Software components on ECU are initialized.		
	- ECU is in Machine State Startup and - Operating system on ECU has booted.		
Post-conditions	TCP connection between PHM Tester and ECU is closed.		
Main Test Execution			
Test Steps	1		Pass Criteria
Step 1	[PHMApp01], [PHMApp	02], [PHMApp03]	
	All applications are repo with the correct timing. i <expectedaliveindicatio corresponding to their <</expectedaliveindicatio 	.e. reporting ns> within time	
Step 2	[PHMAppCheck]		-Elementary supervision status is kOK
	After time corresponding <alivereferencecycle>, supervised entities.</alivereferencecycle>	g to 100 x the longest , check the status of the 3	

/	< l
/	/

Step 3	[PHMApp02]	
	Supervised entity 2 is missing some of its checkpoints, yet within its configured margins <maxmargin2> and <minmargin2></minmargin2></maxmargin2>	
Step 4	[PHMAppCheck]	-Elementary supervision status is kOK
	After time corresponding to 100 x the longest <alivereferencecycle>, check the status of the 3 supervised entities.</alivereferencecycle>	
Step 5	[PHMApp02]	
	Supervised entity 2 is missing some of its checkpoints, and surpassing its configured margins <maxmargin2> and < MinMargin2>, yet for time less than <expiredsupervisionc yclesTolerance2></expiredsupervisionc </maxmargin2>	
Step 6	[PHMAppCheck]	-Elementary supervision status 1 and 3 is
	After time corresponding to 100 x the longest <aliverefe rencecycle="">, check the status of the 3 supervised entities.</aliverefe>	kOK -Elementary supervision status 2 is kFailed

17.1.1 Test configurations

17.1.1.1 STC_SM_00001

Configuration ID	STC_SM_00001	
Description	Standard Jenkins server for State Management test	
ECU 2	Hardware, 192.168.7.14	
Jenkins	Jenkins Server, 192.168.7.10	

The Jenkins Server, running the job with the State Management test (SM Tester) is connected via Ethernet to ECU2 hosting the System Test Applications [SMApp02], [SMApp03], [SMApp04], [SMApp05] and [SMApp06].

The Exec Tester is supposed to check the pass criteria.

The communication between Exec Tester and the applications on the ECU may take place over the Diagnostics functional cluster in form of diagnostic messages.

Step 1	[SM Tester]	[SMAPP04] Modelled Process2
	Query execution status of [SMAPP04] Modelled Process2.	is executed
Step 2	[SMApp02]	
	Request change of Internal State to SM_Int_State2 from State Manager via method call SM_RequestState_Int1	
Step 3	[SMApp03]	
	Request change of Internal State to <i>SM_Int_State3</i> from State Manager via method call <i>SM_RequestState_Int1</i>	
Step 4	[SM Tester]	
	Request for change of Function Group FG1 State to <i>State2</i> from Execution Manager by invoking SetState API.	
Step 5	[SM Tester]	[SMAPP04] Modelled Process2
	Query execution status of [SMAPP04] Modelled Process2.	is not executed.
Step 6	[SM Tester]	[SMAPP05] Modelled Process is
	Query execution status of [SMAPP05] Modelled Process.	executed.
Step 7	[SM Tester]	Message with MSG1 new state
	Observe the log for [SMAPP04] Modelled Process2.	State2 is received Message with context ID CTX42 and application ID APPID4 is received which is logged within the internal function SMApp04Func of [SMAPP04] Modelled Process2
Step 8	[SM Tester]	
	Request for change of Function Group FG1 State to <i>State3</i> from Execution Manager by invoking SetState API.	
Step 9	[SM Tester]	[SMAPP04] Modelled Process2 is not executed.
	Query execution status of [SMAPP05] Modelled Process.	
Step 10	[SM Tester]	[SMAPP06] Modelled Process is executed.
	Query execution status of [SMAPP06] Modelled Process.	
Step 11	[SM Tester]	Message with MSG2 new state State3 is received.
	Observe the log for [SMAPP04] Modelled Process2.	Message with context ID <i>CTX42</i> and application ID <i>APPID4</i> is received which is logged within the internal function <i>SMApp04Func</i> of [SMAPP04] Modelled Process2
