1 Introduction and functional overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module Ethernet Wireless driver.

In the AUTOSAR Layered Software Architecture, the Wireless Ethernet Transceiver driver belongs to the Microcontroller Abstraction Layer, or more precisely, to the Communication Drivers.

This indicates the main task of the Wireless Ethernet Transceiver driver:

Provide to the upper layer (Ethernet Interface) a hardware independent interface comprising multiple equal transceivers. This interface shall be uniform for all transceivers. Thus, the upper layer (Ethernet Interface) may access the underlying bus system in a uniform manner. The interface provides functionality for initialization, configuration and data transmission. The configuration of the Wireless Ethernet Transceiver driver however is bus specific, since it takes into account the specific features of the communication controller.

A single Wireless Ethernet Transceiver driver module supports only one type of transceiver hardware. The Wireless Ethernet Transceiver driver's prefix requires a unique namespace. The Ethernet Interface can access different Wireless Ethernet controller types using different Wireless Ethernet Transceiver drivers using this prefix. The decision which driver to use to access a particular transceiver is a configuration parameter of the Ethernet Interface.

Figure 1.1 depicts the lower part of the Wireless Ethernet stack. One Ethernet Interface can access several transceivers using several Wireless Ethernet Transceiver drivers. Each transceiver may support multiple radio configurations.

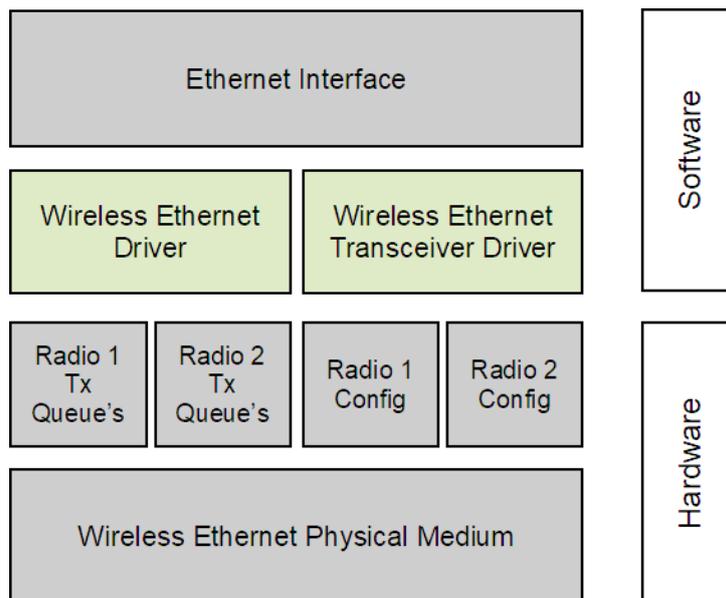

Figure 1.1: Wireless Ethernet module overview

2 Acronyms and Abbreviations

The glossary below includes acronyms and abbreviations relevant to the Wireless Ethernet Transceiver Driver module that are not included in the [1, AUTOSAR glossary].

| Abbreviation / Acronym: | Description: |
|-------------------------|--|
| AIFS | Arbitration Inter Frame Space |
| CBR | Channel Busy Ratio |
| CIT | Channel Idle Time |
| CW | Contention Window |
| DP | DCC Profile |
| EthIf | Ethernet Interface (AUTOSAR BSW module) |
| Eth | Ethernet Driver (AUTOSAR BSW module) |
| EthTrcv | Ethernet Transceiver Driver (AUTOSAR BSW module) |
| ISR | Interrupt Service Routine |
| MCG | Module Configuration Generator |
| WEth | Wireless Ethernet Driver (AUTOSAR BSW module) |
| WEthTrcv | Wireless Ethernet Transceiver (AUTOSAR BSW module) |

3.2 Related specification

AUTOSAR provides a General Specification on Basic Software modules [2, SWS BSW General], which is also valid for Wireless Ethernet Transceiver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Wireless Ethernet Transceiver.

Furthermore, this document uses the Ethernet Transceiver Driver as a base for the requirements, APIs and configuration, because the wired and the wireless use case have many things (but not all) in common. The term "Ethernet Transceiver Driver" as used in this document describes the class of Ethernet drivers regardless of the used physical layer and means Wireless as well as Wired Ethernet Transceiver Drivers.

4 Constraints and assumptions

4.1 Limitations

The Microcontroller Abstraction Layer Multi-Core Distribution Concept is implemented as "draft" in this software specification. Refer to chapter [10](#) for more information.

4.2 Applicability to car domains

The Wireless Ethernet Transceiver Driver is intended to be used for wireless access of customer hardware (Access Point mode) and to abstract the hardware for wireless access of Vehicle-2-X (V2X) applications / BSW Modules (using a meshed network).

5 Dependencies to other modules

This chapter lists the modules interacting with the Wireless Ethernet Transceiver Driver module.

Modules that use Wireless Ethernet Transceiver Driver module:

- Ethernet Interface (EthIf)

Modules used by the Wireless Ethernet Transceiver Driver module:

- Wireless Ethernet Controller Driver (WEth) to abstract the hardware access via an transceiver dependent interface
- Typically the V2X modem and/or the transceiver hardware is an external device that is accessed by an existing communication driver such as SPI.

6 Requirements Tracing

Requirement IDs within this document have an encoding to state where each requirement has its origin:

- SWS items starting with a leading 0 (SWS_WEth_0xxxx) are inherited from the [3, SWS Ethernet Driver].
- SWS items starting with a leading 1 (SWS_WEth_1xxxx) are module specific and not inherited.
- SWS items starting with a leading 2 (SWS_WEth_2xxxx) are inherited from C2C-CC Basic System Profile

The following tables reference the requirements specified in [4], [5] and links to the fulfillment of these. Please note that if column “Satisfied by” is empty for a specific requirement this means that this requirement is not fulfilled by this document.

| Requirement | Description | Satisfied by |
|-----------------|--|--|
| [SRS_BSW_00323] | All AUTOSAR Basic Software Modules shall check passed API parameters for validity | [SWS_WEthTrcv_00007] |

Table 6.1: Requirements Tracing

7 Functional specification

The Wireless Ethernet Transceiver driver sets up the radio for wireless communications.

7.1 Wireless Ethernet BSW stack

As part of the AUTOSAR Layered Software Architecture (see Figure 1.1), the Wireless Ethernet BSW modules also form a layered software stack. The Ethernet Interface module accesses several transceivers using the Wireless Ethernet transceiver Driver layer, which can be made up of several Wireless Ethernet Transceiver Drivers modules.

7.1.1 Indexing scheme

Users of the Wireless Ethernet Driver identify controller resources using an indexing scheme as described in the [6, SWS Ethernet Transceiver Driver].

[SWS_WEthTrcv_00003]

Upstream requirements: [SRS_BSW_00413](#)

[The Wireless Ethernet Transceiver Driver is using a zero-based index to abstract the access for upper software layers. The parameter WEthTrcvId within configuration corresponds to parameter TrcvId used in the API.]

[SWS_WEthTrcv_10001]

Upstream requirements: [SRS_BSW_00413](#)

[The Wireless Ethernet Transceiver Driver is using a zero-based index to abstract the access to Radios for upper software layers. The parameter WEthTrcvRadioid within configuration corresponds to parameter Radioid used in the API.]

7.1.2 Requirements

This chapter lists requirements that shall be fulfilled by Wireless Ethernet Transceiver Driver module implementations.

The Wireless Ethernet Driver module environment comprises all modules which are calling interfaces of the Wireless Ethernet Driver module.

[SWS_WEthTrcv_00007]

Upstream requirements: [SRS_BSW_00323](#)

[In case development error detection is enabled for the Wireless Ethernet Transceiver Driver module: The Wireless Ethernet Transceiver Driver module shall check API parameters for validity and report detected errors to the DET.]

DET API functions are specified in the [7, SWS Default Error Tracer].

7.1.3 Transceiver Parameters**[SWS_WEthTrcv_10026]**

Upstream requirements: [SRS_V2X_00391](#)

[The function `WEthTrcv_SetRadioParams` shall set properties of type `WEthTrcv_SetRadioParamIdType` to the access layer of a specific wireless radio indexed by `Radioid`.]

[SWS_WEthTrcv_10039]

Upstream requirements: [SRS_V2X_00391](#)

[The function `WEthTrcv_SetChanRxParams` shall set properties of type `WEthTrcv_SetChanRxParamIdType` to a specific wireless channel within a wireless radio indexed by `Radioid`.]

[SWS_WEthTrcv_10041]

Upstream requirements: [SRS_V2X_00391](#)

[The function `WEthTrcv_SetChanTxParams` shall set of type `WEthTrcv_SetChanTxParamIdType` to a specific wireless channel within a wireless radio indexed by `Radioid`.]

[SWS_WEthTrcv_10049]

Upstream requirements: [SRS_V2X_00391](#)

[The function `EthTrcv_GetChanRxParams` shall provide properties of type `WEthTrcv_GetChanRxParamIdType` of a specific wireless channel within a wireless radio indexed by `Radioid`.]

7.1.4 Key/Value Parameter Mapping

[SWS_WEthTrcv_10066]

Upstream requirements: [SRS_V2X_00391](#)

[For unique reference to transmission and reception parameters, unique enumeration IDs shall be used within this module.]

[SWS_WEthTrcv_10058]

Upstream requirements: [SRS_V2X_00391](#)

[Functions using the type WEthTrcv_SetRadioParamIdType shall use a generic list of uint32 values for the list of corresponding values.]

| WETHTRCV_GETCHRXPID_CBR | uint8 |
| WETHTRCV_GETCHRXPID_CIT | uint16 |

Functions using the WEthTrcv_GetChanRxParamIdType shall use the type mapping provided by the table above for the corresponding values.

]

7.1.5 MainFunction

[SWS_WEthTrcv_10057]

Upstream requirements: [SRS_V2X_00322](#), [SRS_BSW_00432](#)

[The MainFunction is used for hardware / software implementation specific execution of cyclic tasks.

In case of V2X the MainFunction is used to get Information of the current wireless transceiver channel status (CBR) if the transceiver is not indirectly accessed via the wireless Ethernet driver.]

7.1.6 V2X Specific Transceiver Requirements

[SWS_WEthTrcv_20226]

Upstream requirements: [SRS_V2X_00010](#)

[RF output power of the WEthTrcv module shall be adjustable.]

[SWS_WEthTrcv_20244]

Upstream requirements: [SRS_V2X_00010](#)

[The WEthTrcv module shall abide by the following maximum message rates:

- For the relaxed state: the sum of all messages sent on DP1, DP2 and DP3 while in relaxed state shall not surpass $R_{\max_relaxed} = 16.7$ messages per second. Message bursts are allowed for DP0 with $R_{Burst} = 20$ messages per second, with a maximum duration of $T_{Burst} = 1$ seconds, and may only take place every $T_{BurstPeriod} = 10$ seconds. Thus, adding DP0 messages, the maximum message rate amounts to $R_{\max_relaxed} = 36.7$ messages per second.

]

[SWS_WEthTrcv_20246]

Upstream requirements: [SRS_V2X_00245](#)

[The WEthTrcv module shall reduce its transmission power to $P_{Toll} = 10$ dBm as soon as the protected communication zone is entered, and without changing any other DCC transmission parameters. DP0 messages are excluded from this restriction.]

7.1.7 Wake-up support

There is currently no efficient concept for technologies like Wake on Wireless LAN. Wireless Wake-up is therefore not supported.

7.2 Error Classification

Section "Error Handling" of the document [2] "General Specification of Basic Software Modules" describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

7.2.1 Development Errors

[SWS_WEthTrcv_00017] Definiton of development errors in module WEthTrcv

Upstream requirements: [SRS_BSW_00327](#)

[

| Type of error | Related error code | Error value |
|-------------------------------------|--------------------------|-------------|
| Invalid transceiver index | WETHTRCV_E_INV_TRCV_ID | 0x01 |
| WEthTrcv module was not initialized | WETHTRCV_E_UNINIT | 0x02 |
| Invalid pointer in parameter list | WETHTRCV_E_PARAM_POINTER | 0x03 |

]

7.2.2 Runtime Errors

There are no runtime errors.

7.2.3 Production Errors

There are no production errors.

7.2.4 Extended Production Errors

Extended production errors are handled as events of the Diagnostic Event Manager. The event IDs are defined in the following tables, while the actual values are assigned externally by the configuration of the Diagnostic Event Manager, and are included in the module via Dem.h.

[SWS_WEthTrcv_00105]

Upstream requirements: [SRS_BSW_00339](#)

[

| | | |
|-----------------------|--|--|
| Error Name: | WETHTRCV_E_ACCESS | |
| Short Description: | Wireless Ethernet Transceiver Access Failure. | |
| Long Description: | Monitors the access to the Wireless Ethernet Transceiver if a transceiver hardware is separate from the baseband modem hardware. | |
| Detection Criteria: | Fail | When access to the Wireless Ethernet Transceiver fails the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM. |
| | Pass | When access to the Wireless Ethernet Transceiver succeeds the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM. |
| Secondary Parameters: | None. | |
| Time Required: | None. | |
| Monitor Frequency | None. | |

]

7.3 Security Events

The module does not report security events.

8 API specification

8.1 Imported types

In this chapter all types included from the following files are listed.

[SWS_WEthTrcv_00027] Definition of imported datatypes of module WEthTrcv [

| Available via | WEthTrcv.h |

]

8.2.2 WEthTrcv_SetRadioParamIdType

[SWS_WEthTrcv_10008] Definition of datatype WEthTrcv_SetRadioParamIdType [

| | | | |
|----------------------|---|------|--|
| Name | WEthTrcv_SetRadioParamIdType | | |
| Kind | Enumeration | | |
| Range | WETHTRCV_SETRADIOPID_SEL_TRCV_CHCFG | 0x01 | Select which channel config within the transceiver should be set within multichannel context mode |
| | WETHTRCV_SETRADIOPID_SET_CHCFGID | 0x02 | Switch to another channel config in single channel context mode or in multichannel context mode (requires previous selection of channel config in transceiver) |
| | WETHTRCV_SETRADIOPID_TOLLINGZONE_INFO | 0x03 | Information of entering and leaving a Tolling Zone Area |
| Description | Wireless radio settings for the transceiver | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.2.3 WEthTrcv_SetChanRxParamIdType

[SWS_WEthTrcv_10009] Definition of datatype WEthTrcv_SetChanRxParamIdType [

| | | | |
|--------------|-------------------------------|------|---------|
| Name | WEthTrcv_SetChanRxParamIdType | | |
| Kind | Enumeration | | |
| Range | WETHTRCV_SETCHRXPID_BITRATE | 0x00 | Bitrate |

| | | | |
|----------------------|--|------|---------------------------------|
| | WETHRCV_ SETCHRXPID_ BANDWIDTH | 0x01 | Bandwidth |
| | WETHRCV_ SETCHRXPID_ FREQ | 0x02 | Center frequency of a channel |
| | WETHRCV_ SETCHRXPID_ CSPWRTRESH | 0x03 | Parameter for Rx busy detection |
| | WETHRCV_ SETCHRXPID_ RADIO_ MODE | 0x04 | Param for Rx Radio Mode |
| | WETHRCV_ SETCHRXPID_ ANTENNA | 0x05 | Rx Antenna Id |
| Description | Wireless channel settings for the receive side | | |
| Available via | WEth_GeneralTypes.h | | |

8.2.4 WEthTrcv_SetChanTxParamIdType

[SWS_WEthTrcv_10011] Definition of datatype WEthTrcv_SetChanTxParamIdType

| | | | |
|--------------|---|------|---|
| Name | WEthTrcv_SetChanTxParamIdType | | |
| Kind | Enumeration | | |
| Range | WETHRCV_ SETCHTXPID_ BITRATE | 0x00 | Bitrate |
| | WETHRCV_ SETCHTXPID_ BANDWIDTH | 0x01 | Bandwidth |
| | WETHRCV_ SETCHTXPID_ TXPOWER | 0x02 | Transmission power |
| | WETHRCV_ SETCHTXPID_ DCC_CBR | 0x03 | Param for Channel Busy Ratio for DCC |
| | WETHRCV_ SETCHTXPID_ TXQSEL | 0x04 | Selection of the transmit queue for that the settings should be set |
| | WETHRCV_ SETCHTXPID_ TXQCFG_ AIFSN | 0x05 | Arbitration inter-frame-spacing number (multiplier with value of 0 to 15) |
| | WETHRCV_ SETCHTXPID_ TXQCFG_ CWMIN | 0x06 | Contention window min |
| | WETHRCV_ SETCHTXPID_ TXQCFG_ CWMAX | 0x07 | Contention window max |
| | WETHRCV_ SETCHTXPID_ TXQCFG_ TXOP | 0x08 | TXOP duration limit [µs] divided by 32 |

| | | | |
|----------------------|-------------------------------------|------|---|
| | WETHTRCV_SETCHTXPID_RADIO_MODE | 0x09 | Param for Tx Radio Mode |
| | WETHTRCV_SETCHTXPID_ANTENNA | 0x0A | Tx Antenna Id |
| | WETHTRCV_SETCHTXPID_PACKET_INTERVAL | 0x0C | Packet interval for transmission interspace |
| | WETHTRCV_SETCHTXPID_DCC_STATE | 0x0D | State of DCC state machine |
| Description | - | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.2.5 WEthTrcv_GetChanRxParamIdType

[SWS_WEthTrcv_10007] Definition of datatype WEthTrcv_GetChanRxParamIdType [

| | | | |
|----------------------|---|------|-------------------------------------|
| Name | WEthTrcv_GetChanRxParamIdType | | |
| Kind | Enumeration | | |
| Range | WETHTRCV_GETCHRXPID_CBR | 0x00 | Parameter Id for Channel Busy Ratio |
| | WETHTRCV_GETCHRXPID_CIT | 0x01 | Parameter Id for Channel Idle Time |
| Description | Wireless channel properties of the receive side | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.2.6 WEthTrcv_BandwidthType

[SWS_WEthTrcv_10012] Definition of datatype WEthTrcv_BandwidthType [

| | | | |
|---------------------|------------------------|------|------------------|
| Name | WEthTrcv_BandwidthType | | |
| Kind | Type | | |
| Derived from | uint32 | | |
| Range | 0x0000004..0xFFFFFFFF | - | Invalid |
| | WETHTRCV_BW_5MHz | 0x00 | Indicates 5 MHz |
| | WETHTRCV_BW_10MHz | 0x01 | Indicates 10 MHz |
| | WETHTRCV_BW_20MHz | 0x02 | Indicates 20 MHz |

△

| | | | |
|----------------------|------------------------------|------|------------------|
| | WETHTRCV_BW_40MHz | 0x03 | Indicates 40 MHz |
| Description | Bandwidth of a radio channel | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.2.7 WEthTrcv_TxPwrLvIType

[SWS_WEthTrcv_10014] Definition of datatype WEthTrcv_TxPwrLvIType [

| | | | |
|----------------------|---|---|---|
| Name | WEthTrcv_TxPwrLvIType | | |
| Kind | Type | | |
| Derived from | uint16 | | |
| Range | 0..399 | – | Valid values of 0.5db with an offset of -100dBm |
| | 400..65535 | – | Invalid |
| Description | Power of frame, in 0.5 dBm units, raw value 0 equals -100 dBm | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.2.8 WEthTrcv_RssiType

[SWS_WEthTrcv_10016] Definition of datatype WEthTrcv_RssiType [

| | | | |
|----------------------|---|---|---|
| Name | WEthTrcv_RssiType | | |
| Kind | Type | | |
| Derived from | uint16 | | |
| Range | 0..399 | – | Valid values of 0.5db with an offset of -100dBm |
| | 400..65535 | – | Invalid |
| Description | Power of frame, in 0.5 dBm units, raw value 0 equals -100 dBm | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.2.9 WEthTrcv_RadioModeType

[SWS_WEthTrcv_10018] Definition of datatype WEthTrcv_RadioModeType [

| | | | |
|----------------------|---|------|-------------------------------|
| Name | WEthTrcv_RadioModeType | | |
| Kind | Type | | |
| Derived from | uint8 | | |
| Range | 0x05..0xFF | – | Invalid |
| | WETHTRCV_MODE_OFF | 0x00 | Radio is off |
| | WETHTRCV_MODE_RX | 0x01 | Receive is on |
| | WETHTRCV_MODE_TX | 0x02 | Transmit is on |
| | WETHTRCV_MODE_RX_TX | 0x03 | Receive and Transmit is on |
| | WETHTRCV_MODE_SWITCHED | 0x04 | Radio channel switching is on |
| Description | Radio operation mode with multiple radio channel configurations | | |
| Available via | WEth_GeneralTypes.h | | |

]

8.3 Function definitions

This is a list of functions provided for upper layer modules.

8.3.1 WEthTrcv_Init

[SWS_WEthTrcv_00028] Definition of API function WEthTrcv_Init [

| | | |
|---------------------------|---|---|
| Service Name | WEthTrcv_Init | |
| Syntax | <pre>void WEthTrcv_Init (const WEthTrcv_ConfigType* CfgPtr)</pre> | |
| Service ID [hex] | 0x01 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | CfgPtr | Points to the implementation specific structure |
| Parameters (inout) | None | |
| Parameters (out) | None | |
| Return value | None | |
| Description | Initializes the Wireless Ethernet Transceiver Driver | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10022] [The function shall store the access to the configuration structure for subsequent API calls.]

[SWS_WEthTrcv_00035] [The function shall configure all transceiver configuration parameters (e.g. baud rate, duplex mode, automatic negotiation, ...)]

[SWS_WEthTrcv_00030] [The function shall change the state of the component from WETHTRCV_STATE_UNINIT to WETHTRCV_STATE_INIT.]

[SWS_WEthTrcv_00040] [The function shall check the access to the Wireless Ethernet Transceiver. If the check fails, the function shall raise the production error WETHTRCV_E_ACCESS and return E_NOT_OK, otherwise pass the production error WETHTRCV_E_ACCESS and return E_OK.]

[SWS_WEthTrcv_00032] [Caveat: The API has to be called during initialization.]

8.3.2 WEthTrcv_SetTransceiverMode

[SWS_WEthTrcv_00042] **Definition of API function WEthTrcv_SetTransceiver Mode** [

| | | |
|---------------------------|---|---|
| Service Name | WEthTrcv_SetTransceiverMode | |
| Syntax | Std_ReturnType WEthTrcv_SetTransceiverMode (uint8 TrcvId, Eth_ModeType TrcvMode) | |
| Service ID [hex] | 0x03 | |
| Sync/Async | Asynchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver within the context of the Ethernet Transceiver Driver |
| | TrcvMode | ETH_MODE_DOWN: disable the wireless Ethernet transceiver ETH_MODE_ACTIVE: enable the wireless Ethernet transceiver |
| Parameters (inout) | None | |
| Parameters (out) | None | |
| Return value | Std_ReturnType | E_OK: Service accepted E_NOT_OK: Service denied |
| Description | Enables / disables the indexed transceiver | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10023] [The function shall put the index transceiver in the specified mode and indicate the new mode by the API EthIf_TrcvModeIndication latest during the next WEthTrcv_MainFunction.]

[SWS_WEthTrcv_00044] [If development error detection is enabled: The function shall check that the service WEthTrcv_Init was previously called.]

If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00045] [If development error detection is enabled: The function shall check the parameter TrcvIdx for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_IDX otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00046] [The function shall be pre compile time configurable On/Off by the configuration parameter: WEthTrcvSetTransceiverModeApi.]

[SWS_WEthTrcv_00107] [If the transceiver is already in the requested mode E_OK shall be returned and no development error shall be raised.]

[SWS_WEthTrcv_00104] [The function shall check the access to the Wireless Ethernet transceiver. If the check fails, the function shall raise the production error WETHTRCV_E_ACCESS and return E_NOT_OK, otherwise pass the production error WETHTRCV_E_ACCESS and return E_OK.]

[SWS_WEthTrcv_00047] [Caveat: The function requires previous transceiver initialization (EthTrcv_Init).]

8.3.3 WEthTrcv_GetTransceiverMode

[SWS_WEthTrcv_00048] Definition of API function WEthTrcv_GetTransceiver Mode [

| | | |
|---------------------------|---|---|
| Service Name | WEthTrcv_GetTransceiverMode | |
| Syntax | Std_ReturnType WEthTrcv_GetTransceiverMode (uint8 TrcvId, Eth_ModeType* TrcvModePtr) | |
| Service ID [hex] | 0x04 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver within the context of the Wireless Ethernet Transceiver Driver |
| Parameters (inout) | None | |

| | | |
|-------------------------|--|---|
| Parameters (out) | TrcvModePtr | ETH_MODE_DOWN: the wireless Ethernet transceiver is disabled ETH_MODE_ACTIVE: the wireless Ethernet transceiver is enabled |
| Return value | Std_ReturnType | E_OK: success E_NOT_OK: wireless Ethernet transceiver could not be initialized |
| Description | Obtains the state of the indexed transceiver | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10024] [The function shall read the current transceiver mode.]

[SWS_WEthTrcv_00050] [If development error detection is enabled: The function shall check that the service EthTrcv_Init was previously called.

If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00051] [If development error detection is enabled: The function shall check the parameter TrcvIdx for being valid.

If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_IDX otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00052] [If development error detection is enabled: The function shall check the parameter TrcvModePtr for being valid.

If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00053] [The function shall be pre compile time configurable On/Off by the configuration parameter: WEthTrcvGetTransceiverModeApi.]

[SWS_WEthTrcv_00054] [Caveat: The function requires previous transceiver initialization (WEthTrcv_Init).]

8.3.4 WEthTrcv_GetLinkState

[SWS_WEthTrcv_00061] Definition of API function WEthTrcv_GetLinkState [

| | | |
|---------------------------|---|---|
| Service Name | WEthTrcv_GetLinkState | |
| Syntax | <pre>Std_ReturnType WEthTrcv_GetLinkState (uint8 TrcvId, EthTrcv_LinkStateType* LinkStatePtr)</pre> | |
| Service ID [hex] | 0x06 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver within the context of the Ethernet Transceiver Driver |
| Parameters (inout) | None | |
| Parameters (out) | LinkStatePtr | ETHTRCV_LINK_STATE_DOWN: transceiver is disconnected ETHTRCV_LINK_STATE_ACTIVE: transceiver is connected |
| Return value | Std_ReturnType | E_OK: success E_NOT_OK: transceiver could not be initialized |
| Description | Obtains the link state of the indexed transceiver | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10073] [The function shall read the current transceiver link state.]

[SWS_WEthTrcv_00063] [If development error detection is enabled: The function shall check that the service WEthTrcv_Init was previously called.

If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00064] [If development error detection is enabled: The function shall check the parameter TrcvIdx for being valid.

If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_IDX otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00065] [If development error detection is enabled: The function shall check the parameter LinkStatePtr for being valid.

If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_00066] [The function shall be pre compile time configurable On/Off by the configuration parameter: WEthTrcvGetLinkStateApi.]

[SWS_WEthTrcv_00067] [Caveat: The function requires previous transceiver initialization (WEthTrcv_Init).]

8.3.5 WEthTrcv_SetRadioParams

[SWS_WEthTrcv_10025] Definition of API function WEthTrcv_SetRadioParams [

| | | |
|---------------------------|---|--|
| Service Name | WEthTrcv_SetRadioParams | |
| Syntax | <pre>Std_ReturnType WEthTrcv_SetRadioParams (uint8 TrcvId, const WEthTrcv_SetRadioParamIdType* ParamIds, const uint32* ParamValue, uint8 NumParams)</pre> | |
| Service ID [hex] | 0x30 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver |
| | ParamIds | IDs of the Parameters to set |
| | ParamValue | Values of the Parameters to set |
| | NumParams | Number of Parameters to set |
| Parameters (inout) | None | |
| Parameters (out) | None | |
| Return value | Std_ReturnType | E_OK: success E_NOT_OK: failed writing parameters |
| Description | Set values related to a transceiver's wireless radio. For example, this could be the selection of the radio settings (channel, ...). | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10067] [The function shall use the type mapping from SWS_WEthTrcv_10059 for the ParamIds and ParamValues parameters.]

[SWS_WEthTrcv_10027]

Upstream requirements: [SRS_BSW_00487](#)

[If development error detection is enabled: The function shall check that the service WEthTrcv_Init was previously called. If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT.]

[SWS_WEthTrcv_10028] [If development error detection is enabled: The function shall check the parameter TrcvId for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_ID otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10029] [If development error detection is enabled: The function shall check the parameter RadioId for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_PARAM otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10030] [If development error detection is enabled: The function shall check the parameter ParamIds for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

[SWS_WEthTrcv_10031] [If development error detection is enabled: The function shall check the parameter ParamValues for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

8.3.6 WEthTrcv_SetChanRxParams

[SWS_WEthTrcv_10033] Definition of API function WEthTrcv_SetChanRxParams

| | | |
|---------------------------|---|--|
| Service Name | WEthTrcv_SetChanRxParams | |
| Syntax | <pre>Std_ReturnType WEthTrcv_SetChanRxParams (uint8 TrcvId, uint8 RadioId, const WEthTrcv_SetChanRxParamIdType* ParamIds, const uint32* ParamValues, uint8 NumParams)</pre> | |
| Service ID [hex] | 0x31 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver |
| | RadioId | Index of the Transceiver's Radio (including channel) |
| | ParamIds | IDs of the Parameters to set |
| | ParamValues | Values of the Parameters to set |
| | NumParams | Number of Parameters to set |
| Parameters (inout) | None | |
| Parameters (out) | None | |
| Return value | Std_ReturnType | E_OK: success E_NOT_OK: failed writing parameters |
| Description | Set values related to the receive direction of a transceiver's wireless channel. For example, this could be a channel parameter like the frequency. | |
| Available via | WEthTrcv.h | |

[SWS_WEthTrcv_10068] [The function shall use the type mapping from SWS_WEthTrcv_10061 for the ParamIds and ParamValues parameters.]

[SWS_WEthTrcv_10034]

Upstream requirements: [SRS_BSW_00487](#)

[If development error detection is enabled: The function shall check that the service WEthTrcv_Init was previously called. If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT.]

[SWS_WEthTrcv_10035] [If development error detection is enabled: The function shall check the parameter TrcvId for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_ID otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10036] [If development error detection is enabled: The function shall check the parameter RadioId for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_PARAM otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10037] [If development error detection is enabled: The function shall check the parameter ParamIds for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

[SWS_WEthTrcv_10038] [If development error detection is enabled: The function shall check the parameter ParamValues for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

8.3.7 WEthTrcv_SetChanTxParams

[SWS_WEthTrcv_10040] Definition of API function WEthTrcv_SetChanTxParams

[

| | | |
|-------------------------|---|--|
| Service Name | WEthTrcv_SetChanTxParams | |
| Syntax | <pre>Std_ReturnType WEthTrcv_SetChanTxParams (uint8 TrcvId, uint8 RadioId, const WEthTrcv_SetChanTxParamIdType* TxParamIds, const uint32* ParamValues, uint8 NumParams)</pre> | |
| Service ID [hex] | 0x32 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver |
| | RadioId | Index of the Transceiver's Radio (including channel) |

| | | |
|---------------------------|--|--|
| | TxParamIds | IDs of the Parameters to set |
| | ParamValues | Values of the Parameters to set |
| | NumParams | Number of Parameters to set |
| Parameters (inout) | None | |
| Parameters (out) | None | |
| Return value | Std_ReturnType | E_OK: success E_NOT_OK: failed writing parameters |
| Description | Set values related to the transmit direction of a transceiver's wireless channel. For example, this could be the bitrate of a channel. | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10069] [The function shall use the type mapping from SWS_WEthTrcv_10063 for the TxParamIds and ParamValues parameters.]

[SWS_WEthTrcv_10042]

Upstream requirements: [SRS_BSW_00487](#)

[If development error detection is enabled: The function shall check that the service WEthTrcv_Init was previously called. If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT.]

[SWS_WEthTrcv_10043] [If development error detection is enabled: The function shall check the parameter TrcvId for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_ID otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10044] [If development error detection is enabled: The function shall check the parameter Radioid for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_PARAM otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10045] [If development error detection is enabled: The function shall check the parameter TxParamIds for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

[SWS_WEthTrcv_10046] [If development error detection is enabled: The function shall check the parameter ParamValues for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

8.3.8 WEthTrcv_GetChanRxParams

[SWS_WEthTrcv_10048] Definition of API function WEthTrcv_GetChanRxParams

[

| | | |
|---------------------------|--|---|
| Service Name | WEthTrcv_GetChanRxParams | |
| Syntax | <pre>Std_ReturnType WEthTrcv_GetChanRxParams (uint8* TrcvId, uint8 RadioId, const WEthTrcv_GetChanRxParamIdType* ParamIds, uint32* ParamValues, uint8 NumParams)</pre> | |
| Service ID [hex] | 0x33 | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | TrcvId | Index of the transceiver |
| | Radioid | Index of the Transceiver's Radio (including channel) |
| | ParamIds | IDs of the Parameters to read |
| | NumParams | Number of Parameters to read |
| Parameters (inout) | None | |
| Parameters (out) | ParamValues | Values of the requested Parameters |
| Return value | Std_ReturnType | E_OK: success E_NOT_OK: failed reading parameters |
| Description | Read values related to the receive direction of the transceiver. For example, this could be a Channel Busy Ratio (CBR) or the average Channel Idle Time (CIT). | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_10070] [The function shall use the type mapping from SWS_WEthTrcv_10065 for the ParamIds and ParamValues parameters.]

[SWS_WEthTrcv_10050]

Upstream requirements: [SRS_BSW_00487](#)

[If development error detection is enabled: The function shall check that the service WEthTrcv_Init was previously called. If the check fails, the function shall raise the development error WETHTRCV_E_UNINIT.]

[SWS_WEthTrcv_10051] [If development error detection is enabled: The function shall check the parameter TrcvId for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_TRCV_ID otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10052] [If development error detection is enabled: The function shall check the parameter Radioid for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_INV_PARAM otherwise (if DET is disabled) return E_NOT_OK.]

[SWS_WEthTrcv_10053] [If development error detection is enabled: The function shall check the parameter ParamIds for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

[SWS_WEthTrcv_10054] [If development error detection is enabled: The function shall check the parameter ParamValues for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

8.3.9 WEthTrcv_GetVersionInfo

[SWS_WEthTrcv_00082] Definition of API function WEthTrcv_GetVersionInfo [

| | | |
|---------------------------|---|------------------------------------|
| Service Name | WEthTrcv_GetVersionInfo | |
| Syntax | <pre>void WEthTrcv_GetVersionInfo (Std_VersionInfoType* VersionInfoPtr)</pre> | |
| Service ID [hex] | 0x0b | |
| Sync/Async | Synchronous | |
| Reentrancy | Non Reentrant | |
| Parameters (in) | None | |
| Parameters (inout) | None | |
| Parameters (out) | VersionInfoPtr | Version information of this module |
| Return value | None | |
| Description | Returns the version information of this module | |
| Available via | WEthTrcv.h | |

]

[SWS_WEthTrcv_00093] [If development error detection is enabled: The function shall check the parameter VersionInfoPtr for being valid. If the check fails, the function shall raise the development error WETHTRCV_E_PARAM_POINTER.]

8.4 Callback notifications

The Wireless Ethernet Transceiver Driver does not provide any callback functions.

8.5 Scheduled functions

These functions are directly called by Basic Software Scheduler. The following functions shall have no return value and no parameter. All functions shall be non reentrant.

8.5.1 WEthTrcv_MainFunction

[SWS_WEthTrcv_00106] Definition of scheduled function WEthTrcv_MainFunction [

| | |
|-------------------------|---|
| Service Name | WEthTrcv_MainFunction |
| Syntax | void WEthTrcv_MainFunction (void) |
| Service ID [hex] | 0x0c |
| Description | Used for polling state changes. Calls EthIf_TrcvModeIndication when the transceiver mode changed. |
| Available via | SchM_WEthTrcv.h |

]

8.6 Expected interfaces

In this chapter all external interfaces required from other modules are listed.

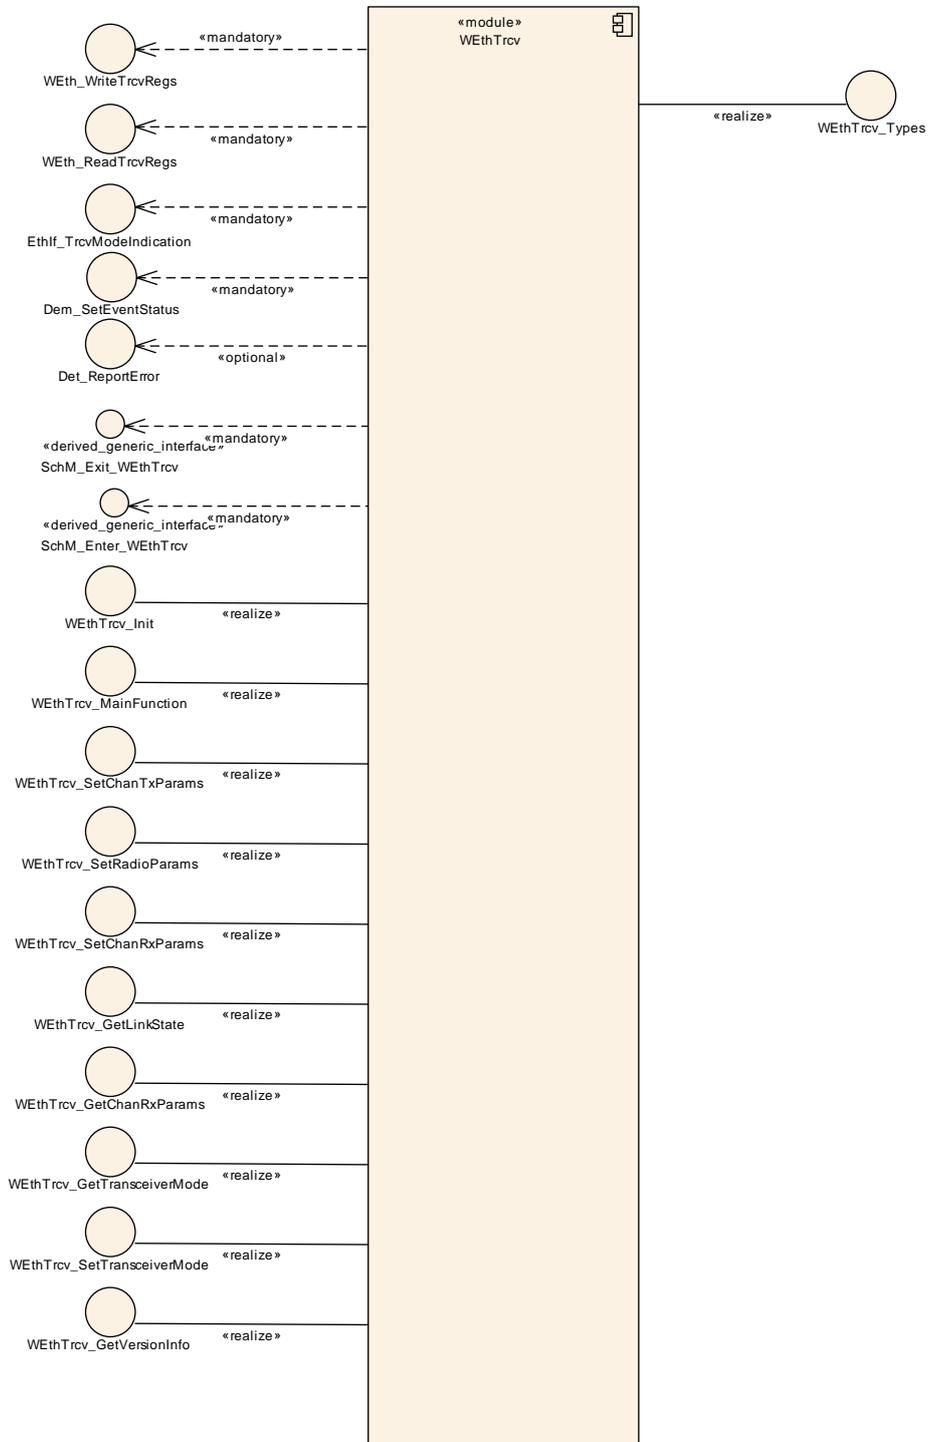

Figure 8.2: Expected external interfaces

8.6.1 Mandatory interfaces

Note: This section defines all interfaces, which are required to fulfill the core functionality of the module.

[SWS_WEthTrcv_00085] Definition of mandatory interfaces required by module WEthTrcv [

| API Function | Header File | Description |
|--------------------------|--------------|--|
| Dem_SetEventStatus | Dem.h | Called by SW-Cs or BSW modules to report monitor status information to the Dem. BSW modules calling Dem_SetEventStatus can safely ignore the return value. This API will be available only if ((Dem/Dem ConfigSet/DemEventParameter/DemEvent ReportingType) == STANDARD_REPORTING) |
| EthIf_TrcvModeIndication | EthIf.h | Called asynchronously when a mode change has been read out. If the function is triggered by previous call of EthTrcv_SetTransceiverMode it can directly be called within the trigger function. |
| SchM_Enter_WEthTrcv | SchM_<Mip>.h | Invokes the SchM_Enter function to enter a module local exclusive area. |
| SchM_Exit_WEthTrcv | SchM_<Mip>.h | Invokes the SchM_Exit function to exit an exclusive area. |
| WEth_ReadTrcvRegs | WEth.h | Reads a transceiver register |
| WEth_WriteTrcvRegs | WEth.h | Configures a transceivers registers or triggers a function offered by the receiver |

]

8.6.2 Optional interfaces

This section defines all interfaces, which are required to fulfill an optional functionality of the module.

[SWS_WEthTrcv_00120] Definition of optional interfaces requested by module WEthTrcv [

| API Function | Header File | Description |
|-----------------|-------------|---------------------------------------|
| Det_ReportError | Det.h | Service to report development errors. |

]

8.6.3 Configurable interfaces

The Wireless Ethernet Transceiver Driver does not use configurable interfaces.

8.7 Service Interfaces

The Wireless Ethernet Transceiver Driver does not provide any Service Interface.

9 Sequence diagrams

The Wireless Ethernet Transceiver driver will interact with Ethernet Interface in the same way as the Ethernet Transceiver driver, see sequence diagrams in [8, SWS Ethernet Interface]. Note: There is no Link State Change event in Wireless Ethernet Transceiver driver.

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module Wireless Ethernet Transceiver Driver.

Chapter 10.3 specifies published information of the module Wireless Ethernet Transceiver Driver.

10.1 How to read this chapter

For details refer to the chapter 10.1 “Introduction to configuration specification” in SWS_BSWGeneral.

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapter 7 and Chapter 8.

[SWS_WEthTrcv_00094] [The Wireless Ethernet Transceiver Driver module shall reject configurations with partition mappings, which are not supported by the implementation.]

10.2.1 WEthTrcv

[ECUC_WEthTrcv_10023] Definition of EcucModuleDef WEthTrcv [

| | |
|-----------------------------------|--|
| Module Name | WEthTrcv |
| Description | Configuration of Ethernet Transceiver Driver module |
| Post-Build Variant Support | true |
| Supported Config Variants | VARIANT-LINK-TIME, VARIANT-POST-BUILD, VARIANT-PRE-COMPILE |

| Included Containers | | |
|--|--------------|---|
| Container Name | Multiplicity | Scope / Dependency |
| WEthTrcvAntennaConfigSet | 1 | This container contains the antenna configurations. |
| WEthTrcvConfigSet | 1 | This container contains the configuration parameters and sub containers of the AUTOSAR WEthTrcv module. |
| WEthTrcvGeneral | 1 | General configuration of Wireless Ethernet Transceiver Driver module |
| WEthTrcvRadioConfigSet | 1..* | This container contains the radio configurations. |

」
