## Advice to users of AUTOSAR Specification Documents:

AUTOSAR Specification Documents may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the Specification Documents for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such Specification Documents, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

## 1 Introduction and Functional Overview

This specification specifies the functionality, API and configuration of the AUTOSAR Basic Software module RAM Test.

The RAM Test is a test of the physical health of the RAM cells. It is not intended to test the contents of the RAM. RAM used for registers is also tested.

There are several RAM Test algorithms available. These RAM Test algorithms are chosen based upon the IEC 61508 specification. The different RAM Test algorithms are divided into 3 groups of diagnostic coverage rates:

- Group 1 (Low): Diagnostic coverage rate = <60%
- Group 2 (Medium): Diagnostic coverage rate = 60% – 90%
- Group 3 (High): Diagnostic coverage rate = 90% – ≤99%.

An ECU safety analysis must be performed to determine which RAM Test diagnostic coverage rate (Low, Medium or High) is required. Appropriate RAM Test algorithms are then selected at compile time. At run time, the application software may choose between the compiled algorithms.

The RAM Test main function may be called asynchronously by the user or may be called in a cyclic manner by an OS task or other cyclic calling method. The user may start and stop the test, and get status reports. Development errors are reported the Development Error Tracer (DET) and production errors are reported to the Diagnostic Event Manager (DEM).

The RamTst module consists of a MainFunction(), some configuration and status API's (Application Programming Interface), and several configuration containers.

<b>TEST FUNCTION API's</b>	<b>DEFINITION</b>
INIT	Prepare resources for testing as necessary. Initialize MainFunction() as necessary. Proceed to "test stopped" state after initialization is complete.
DEINIT	Reset all used registers to reset values, and release all used resources.
ALLOW	Permit the MainFunction() to perform testing at its next scheduled call.
STOP	Prohibit the MainFunction() from performing tests at its next scheduled call. When STOP is called, testing stops after the current atomic sequence. Test status is retained, but test parameters (block number, loop count, etc.) are discarded. ALLOW must be called after STOP to permit the MainFunction() to test when called by the scheduler.
SUSPEND	Temporarily prohibit the MainFunction() from performing tests at its next scheduled call. When SUSPEND is called, testing stops after the current atomic sequence. Test status and test parameters are retained.
RESUME	Permits the Mainfunction() to continue testing at the point where it was suspended, at its next scheduled call. Testing continues according to the saved test parameters.
RUN FULL TEST	Test the entire RAM space without interruption. STOP must be called prior to calling this API.
RUN PARTIAL TEST	Test the portion of the RAM defined by the API. STOP or SUSPEND must be called prior to calling this API.

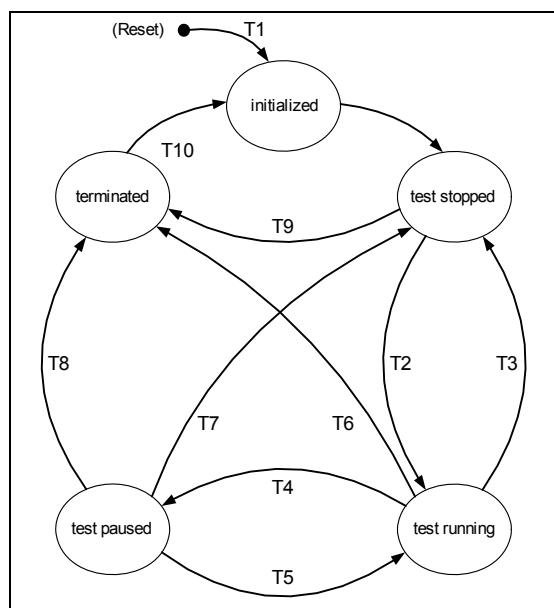

<b>TEST PARAMETER AND FEEDBACK API's</b>
VERSION_INFO
GET_EXECUTION_STATUS

GET_TEST_ALGORITHM
GET_NUMBER_OF_TESTED_CELLS
CHANGE_TEST_ALGORITHM
CHANGE_NUMBER_OF_TESTED_CELLS
CHANGE_MAX_NUMBER_OF_TESTED_CELLS
SELECT_TEST_BLOCK

MainFunction() is the actual testing function of RamTst. MainFunction() may be run in background or foreground mode.

- In background mode, MainFunction() is called periodically by a scheduler, and is interruptible. One complete test consists of testing with one algorithm over the memory space defined by the algorithm configuration. This complete test is split up over many scheduled tasks.

- In foreground mode, MainFunction() is called once, and is not interruptible. It tests with one algorithm over the memory space defined by the algorithm configuration.

The state chart below shows the various states of MainFunction() (not of RamTst). While MainFunction() is running non-interrupted in the foreground, it is in “test running” state. While MainFunction() is running as a background task and is maintaining test and test result status, it is also in the “test running” state. It does not reach “test stopped” state until a full test is completed over the memory space defined in the current algorithm.

Event	Event Trigger
T1	API: INIT
T2	API: RUN_FULL_TEST API: RUN_PARTIAL_TEST API: ALLOW (or start by scheduler)
T3	API: STOP (or test completely finished)
T4	API: SUSPEND (or end of RUN_PARTIAL_TEST) (or error during test)
T5	API: RESUME API: RUN_PARTIAL_TEST
T6	API: DEINIT
T7	API: STOP
T8	API: DEINIT
T9	API: DEINIT
T10	API: INIT

Note: The state “test running” does not necessarily mean that testing is continuously being performed. For foreground testing, it does mean that MainFunction() is actively testing. For background testing, it only means that MainFunction() is permitted to test a small portion of the RAM when it is called periodically by the scheduler.

All API's and configuration variables are fully defined elsewhere within this document.

The following table shows what API's are allowed to be called in each State. For any cell in the table where there is an “N”, there should be a corresponding DET error assigned (except that no DET errors are reported in the “Initialized” State).

API: Application Programming Interface

API's which cause a change of state in the state chart	API allowable in this State?				
	Initialized	Test Stopped	Test Running	Test Paused	Test Terminated
INIT	N	N	N	N	Y
RUN_FULL_TEST <sup>1</sup>	N	Y	N	N	N
RUN_PARTIAL_TEST <sup>2</sup>	N	Y	N	Y	N
SUSPEND <sup>3</sup>	N	N	Y	N	N
RESUME	N	N	N	Y	N
STOP	N	N	Y	Y	N
ALLOW <sup>4</sup>	N	Y	N	N	N

DEINIT	N	Y	N	Y	N
--------	---	---	---	---	---

API's which do not cause a change of state	API allowable in this State?				
	Initialized	Test Stopped	Test Running	Test Paused	Test Terminated
VERSION_INFO	N	Y	Y	Y	N
GET_EXECUTION_STATUS	N	Y	Y	Y	N
GET_TEST_RESULT	N	Y	Y	Y	N
GET_TEST_RESULT_PER_BLOCK	N	Y	Y	Y	N
GET_TEST_ALGORITHM	N	Y	Y	Y	N
GET_NUMBER_OF_TESTED_CELLS	N	Y	Y	Y	N
CHANGE_TEST_ALGORITHM <sup>5</sup>	N	Y	N	N	N
CHANGE_NUMBER_OF_TESTED_CELLS <sup>6</sup>	N	Y	N	Y	N
CHANGE_MAX_NUMBER_OF_TESTED_CELLS	N	Y	N	Y	N
SELECT_TEST_BLOCK <sup>5</sup>	N	Y	N	N	N

NOTES:

<sup>1</sup>RUN\_FULL\_TEST should run uninterrupted (except for watchdog servicing if necessary). It may be called only while MainFunction() is in "test stopped" state.

<sup>2</sup>RUN\_PARTIAL\_TEST should run uninterrupted. It may be called only while MainFunction() is in "test stopped" or "test paused" states.

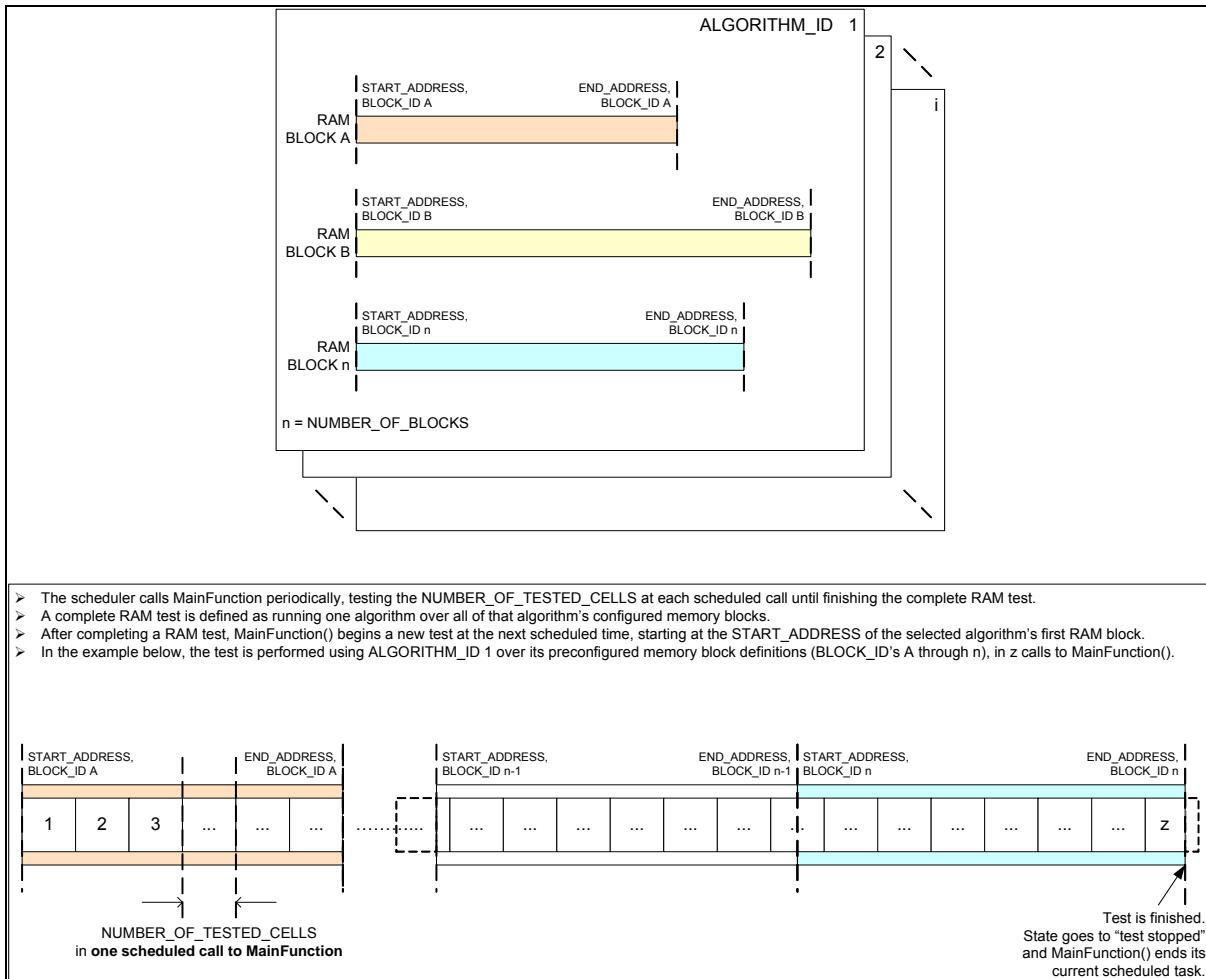

<sup>3</sup>SUSPEND causes a state change to "test paused" at the end of the current MainFunction() atomic sequence if MainFunction() is actively testing.

<sup>4</sup>ALLOW is called to permit the MainFunction() to test when called. ALLOW does not initiate any test itself.

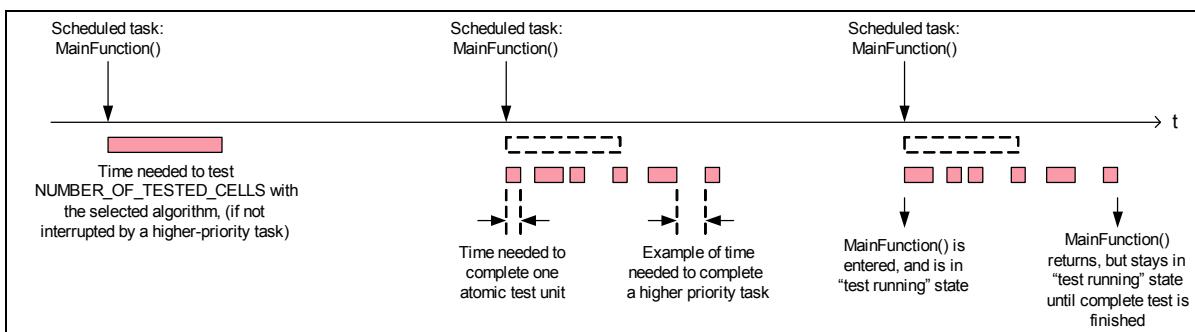

<sup>5</sup>STOP must first be called before changing configuration parameters CHANGE\_TEST\_ALGORITHM and SELECT\_TEST\_BLOCK.

<sup>6</sup>CHANGE\_NUMBER\_OF\_TESTED\_CELLS operates at the end of the current MainFunction() atomic sequence if MainFunction() is actively testing. For a foreground test, CHANGE\_NUMBER\_OF\_TESTED\_CELLS must be called before starting the test (RUN\_FULL\_TEST or RUN\_PARTIAL\_TEST).

The following figure shows how blocks are configured for an algorithm, and how MainFunction() then tests the memory cells for each block.

The following figure shows how MainFunction() is called by the scheduler, and how it can be interrupted between atomic pieces by higher priority tasks (when MainFunction() is run as a background task).

### NUMBER\_OF\_TESTED\_CELLS

The NUMBER\_OF\_TESTED\_CELLS default is set by configuration (pre-compile or link) in the RamTstAlgParams container and applies to every block defined within an algorithm, but can be different for each algorithm. NUMBER\_OF\_TESTED\_CELLS can be changed during runtime using the API

CHANGE\_NUMBER\_OF\_TESTED\_CELLS. This capability, for example, could be used to reduce the duration of the RAM test task before running some other high-bandwidth task in order to prevent task overruns. Such a situation could occur when unusual conditions in a vehicle cause a normally-dormant special algorithm to become active.

For background RAM testing, NUMBER\_OF\_TESTED\_CELLS is not allowed to exceed MAX\_NUMBER\_OF\_TESTED\_CELLS. For foreground RAM testing only, NUMBER\_OF\_TESTED\_CELLS is set equal to EXT\_NUMBER\_OF\_TESTED\_CELLS. Both circumstances are discussed below.

The absolute maximum size of NUMBER\_OF\_TESTED\_CELLS for a given algorithm is defined and documented by the implementer. This maximum should be equal to the sum of the block sizes as defined by the block descriptions in the algorithm. The integrator sets EXT\_NUMBER\_OF\_TESTED\_CELLS to this absolute maximum value (pre-compile or link) in the RamTstAlgParams container.

EXT\_NUMBER\_OF\_TESTED\_CELLS is not changeable during run time.

The integrator configures (pre-compile or link) the MAX\_NUMBER\_OF\_TESTED\_CELLS for each algorithm in the RamTstAlgParams container. The integrator must carefully select MAX\_NUMBER\_OF\_TESTED\_CELLS such that it puts an upper limit on the run time of MainFunction() in a background task according to the system needs for throughput, as calculated for the scheduler. In no case should MAX\_NUMBER\_OF\_TESTED\_CELLS be set to a value greater than the extended number of cells EXT\_NUMBER\_OF\_TESTED\_CELLS (the absolute maximum size defined by the implementer).

The minimum size of NUMBER\_OF\_TESTED\_CELLS, in terms of bytes, is defined and documented by the implementer. The minimum should be defined as one byte unless there is some physical reason for a larger minimum. The integrator configures (pre-compile or link) the MIN\_NUMBER\_OF\_TESTED\_CELLS to be greater than or equal to the minimum defined by the implementer. MIN\_NUMBER\_OF\_TESTED\_CELLS applies to the entire RAM test module, and not to individual algorithms. It is configured in the RamTstConfigParams container. MIN\_NUMBER\_OF\_TESTED\_CELLS is not changeable during run time.

Any time that CHANGE\_NUMBER\_OF\_TESTED\_CELLS is called, MainFunction() must verify that

$\text{MIN\_NUMBER\_OF\_TESTED\_CELLS} \leq \text{NUMBER\_OF\_TESTED\_CELLS} \leq \text{MAX\_NUMBER\_OF\_TESTED\_CELLS}$ .

Before the foreground tests RUN\_FULL\_TEST or RUN\_PARTIAL\_TEST, CHANGE\_NUMBER\_OF\_TESTED\_CELLS is used to set NUMBER\_OF\_TESTED\_CELLS = EXT\_NUMBER\_OF\_TESTED\_CELLS. This al-

lows these tests to run to completion without interruption. At the end of these tests, NUMBER\_OF\_TESTED\_CELLS is restored.

When MainFunction() reaches the end of a block, it should continue testing at the beginning of the next block until the NUMBER\_OF\_TESTED\_CELLS has been reached in that scheduled task. This is so that the foreground tests use the same MainFunction() as does the background task, because if the MainFunction() concluded its task at a block border then the foreground tests would never be able to run to completion.

When NUMBER\_OF\_TESTED\_CELLS has been reached, the scheduled task is finished.

No matter how many blocks or partial blocks are tested in one MainFunction() scheduled call, test status information must be maintained for each block separately.

### MainFunction()

MainFunction() is called with no parameters. The MainFunction() is the only means provided in the RamTst module for performing a RAM test.

A **background** test is performed by the scheduler periodically calling the MainFunction() to test a NUMBER\_OF\_TESTED\_CELLS of memory using the selected algorithm, until the entire defined area of RAM is tested. This MainFunction() can be interrupted at the end of each atomic sequence during a scheduled task.

A **foreground** test is generally performed uninterrupted by calling the appropriate API, which configures MainFunction() and then calls MainFunction().

#### MainFunction():

- Is made up of atomic pieces which are as small as practically possible. Generally, this means that a MIN\_NUMBER\_OF\_TESTED\_CELLS is completely tested during the atomic sequence.
- At the end of each atomic piece, the flags are checked to see if an OS task has changed any parameter of the state chart, and to respond to question-type API's.
- If NUMBER\_OF\_TESTED\_CELLS is changed, it is checked for validity.
  - If NUMBER\_OF\_TESTED\_CELLS > MAX\_NUMBER\_OF\_TESTED\_CELLS, **then** NUMBER\_OF\_TESTED\_CELLS is set equal to MAX\_NUMBER\_OF\_TESTED\_CELLS. This is a DET error.
  - If NUMBER\_OF\_TESTED\_CELLS < MIN\_NUMBER\_OF\_TESTED\_CELLS, **then** NUMBER\_OF\_TESTED\_CELLS is set equal to MIN\_NUMBER\_OF\_TESTED\_CELLS. This is a DET error.
- Knows inherently:
  - which algorithm it is using;
  - which memory blocks must be tested for this algorithm,
  - start and end addresses of each block;
  - number of cells to test at each call.
- Remembers:
  - which block it is in;
  - which address to start at in the next call;
  - status of the test;
  - overall test results;
  - test results for each block.
- When NUMBER\_OF\_TESTED\_CELLS is reached, MainFunction() ends testing for that scheduled task, and starts the next scheduled task at the next (saved) address.
- When the end of a block is reached during a scheduled task, MainFunction() continues testing at the beginning of the next block, and continues until NUMBER\_OF\_TESTED\_CELLS is reached. (Note: The atomic test sequence should be careful to take into account any issues regarding crossing into the next block.)
- When all blocks are fully tested, MainFunction() goes to "test stopped" state and issues a notification.

- If there is an error during testing, MainFunction() goes to “test paused” state and issues a notification.

### RUN FULL TEST, RUN PARTIAL TEST

“Full” and “Partial” refers to full or partial memory, and **not** the full or partial set of algorithms over the memory space. The test is performed over the specified memory area using only one algorithm. The desired algorithm is selected by calling the API CHANGE\_TEST\_ALGORITHM before calling the foreground test API.

**RUN\_FULL\_TEST API:**

The user calls RUN\_FULL\_TEST with no parameters. The test algorithm to run is chosen before calling this API. This test is normally used for a full RAM check at system startup or shutdown.

Sequence:

```
STOP  
CHANGE_TEST_ALGORITHM to ChosenAlgorithm  
RUN_FULL_TEST
```

**RUN\_FULL\_TEST function:**

- Save the value of NUMBER\_OF\_TESTED\_CELLS.
- Call CHANGE\_NUMBER\_OF\_TESTED\_CELLS, setting NUMBER\_OF\_TESTED\_CELLS equal to EXT\_NUMBER\_OF\_TESTED\_CELLS.
- Call MainFunction(). MainFunction() runs uninterrupted (except for watchdog service if necessary) over the memory space defined in the ChosenAlgorithm.
- After test finishes, restore NUMBER\_OF\_TESTED\_CELLS.

**MainFunction()**

- Executes with ChosenAlgorithm
- Tests all memory blocks defined in ChosenAlgorithm.

**RamTstAlgParams Container for ChosenAlgorithm**

- ALGORITHM\_ID = ChosenAlgorithm
- NUMBER\_OF\_TESTED\_CELLS (changed from previous) = EXT\_NUMBER\_OF\_TESTED\_CELLS.
- (other parameters are configured to a predefined value).

**RUN\_PARTIAL\_TEST API:**

The user calls RUN\_PARTIAL\_TEST with one parameter. The parameter passed is which block to run the test on. This test is used primarily to check a specified memory section immediately before using that memory. This capability is to enable a system safety concept.

Sequence:

```
STOP or SUSPEND  
CHANGE_TEST_ALGORITHM to ChosenAlgorithm  
RUN_PARTIAL_TEST (ChosenBlock)
```

**API function:**

- Save the value of NUMBER\_OF\_TESTED\_CELLS, and all test parameters if a test was currently allowed (current block under test, current test address, current status, etc.).
- Call SELECT\_TEST\_BLOCK to limit the test to the ChosenBlock.
- Call CHANGE\_NUMBER\_OF\_TESTED\_CELLS, to set NUMBER\_OF\_TESTED\_CELLS equal to EXT\_NUMBER\_OF\_TESTED\_CELLS.
- Call MainFunction(). MainFunction() runs in a non-interruptible form over the memory space defined in the ChosenAlgorithm.

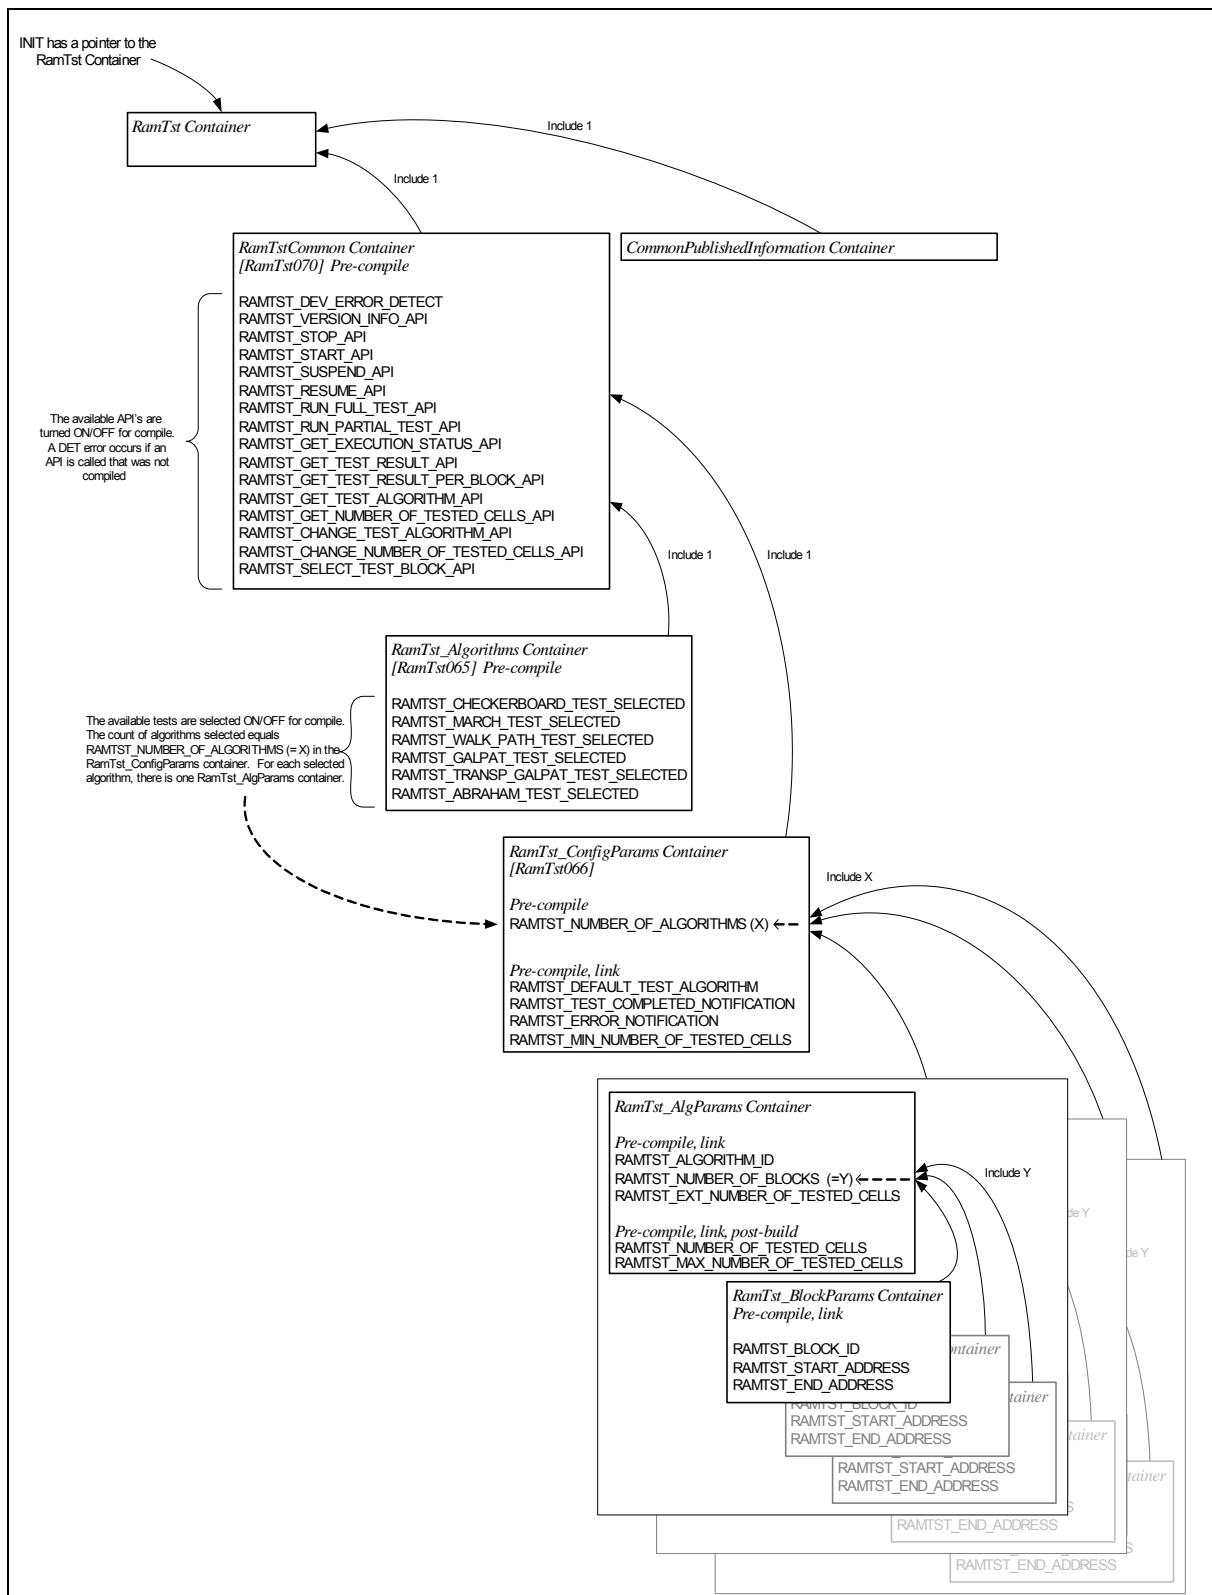

- After test finishes, restore NUMBER\_OF\_TESTED\_CELLS, and any other test parameters that changed when RUN\_PARTIAL\_TEST was called, in order to resume testing where it was paused (if a testing had been allowed prior to the RUN\_PARTIAL\_TEST call).

**MainFunction()**

- Executes with ChosenAlgorithm
- Tests only the memory block selected by the ChosenBlock.

**RamTstAlgParams Container for ChosenAlgorithm**

- ALGORITHM\_ID = ChosenAlgorithm
- NUMBER\_OF\_TESTED\_CELLS (changed from previous) = EXT\_NUMBER\_OF\_TESTED\_CELLS.
- NUMBER\_OF\_BLOCKS = 1.
- (other parameters are configured to a predefined value).

## 2 Acronyms and Abbreviations

<b>Abbreviation / Acronym:</b>	<b>Description:</b>
API	Application Programming Interface
DEM	Diagnostic Event Manager
DET	Development Error Tracer
DMA	Direct Memory Access
NMI	Non Maskable Interrupt
RAM	Random Access Memory

### Definitions

Note: These definition are copied from the AUTOSAR\_Glossary.doc

**Synchronous:** A communication is synchronous when the calling software entity is blocked until the called operation is evaluated. The calling software entity continues its operation by getting the result. Synchronous communication between distributed functional units has to be implemented as remote procedure call.

**Asynchronous:** Asynchronous communication does not block the sending software entity. The sending software entity continues its operation without getting a response from the communication partner(s). There could be an acknowledgement by the communication system about the sending of the information. A later response to the sending software entity is possible.

[11] CEI/IEC 61508-7:2000: Requirements for electrical/electronic/programmable electronic safety-related systems

## 4 Constraints and Assumptions

Note: To achieve IEC certification (SIL1, SIL2, SIL3), the software implementation must be according to the requirements of IEC61508-3.

### 4.1 Limitations

**RamTst002:** During RAM Test, no other software shall be allowed to modify the RAM area under test. The RAM Test shall be implemented in small atomic pieces in order to accomplish this.

The rationale behind this requirement is the incapability of the RAM test module to ensure data consistency (e.g. during an NMI, or during a DMA transfer).

**RamTst082:** The implementer shall provide integration hints for each algorithm, e.g. “do not use in parallel with a DMA”.

### 4.2 Applicability to car domains

No restrictions.

## 5 Dependencies to Other Modules

The RAM Test is an algorithm which tests the RAM by testing contiguous sets of cells until the entire desired memory space is tested. Each cell set is tested by calling the RAM Test main function.

The set of available algorithms for the RAM Test must be selected at pre-compile time. The software responsible for monitoring the RAM state of health must switch between the compile-time configured algorithms, according to the results of the ECU safety analysis.

The definition of the number of blocks to be tested and the start/end addresses of the blocks must be selected at pre-compile or link time.

The size of the cell set to be tested is set as a default at pre-compile or link time based upon the needs of the scheduler. The size of the cell set may be changed during runtime to accommodate a change in the schedule. One cell set is equal to the NUMBER\_OF\_TESTED\_CELLS, described later in this document.

If the user calls a RAM Test API to test all or part of the RAM immediately (in the foreground), then the user is responsible to mask interrupts as desired while the main RAM Test function is running.

For cyclic calling of the main function, the ECU State Manager or the BSW scheduler must schedule the RAM Test main function.

In development mode the Error-hook function of module DET will be called.

### 5.1 File structure

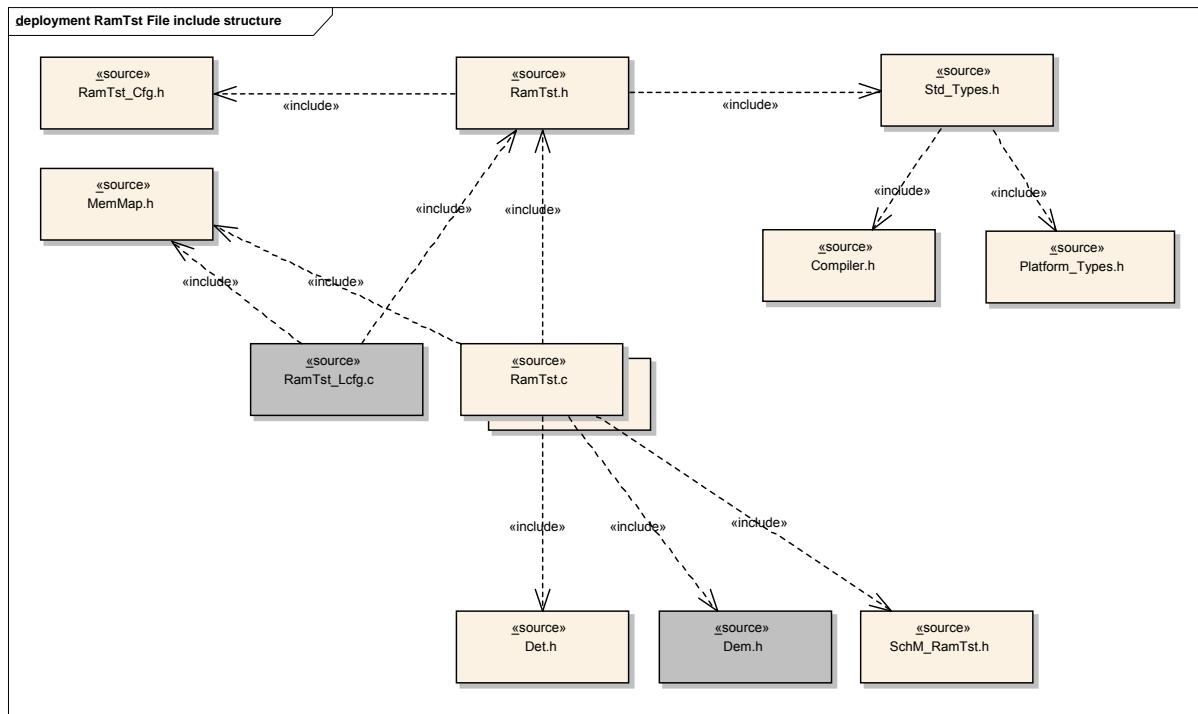

#### 5.1.1 Code file structure

**RamTst086:** The code file structure for the RAM Test module shall not be defined within this specification completely. At this point, it shall be pointed out that the code-file structure shall include the following files named:

- RamTst\_Lcfg.c – for link time configurable parameters

#### 5.1.2 Header file structure

**RamTst003:** The include structure for the source code of the RAM Test module shall be as follows:

**RamTst072:** The module shall include the `Dem.h` file. By this inclusion, the APIs to report errors as well as the required Event Id symbols are included. This specification defines the name of the Event Id symbols which are provided by XML to the DEM configuration tool. The DEM configuration tool assigns ECU dependent values to the Event Id symbols and publishes the symbols in `Dem_IntErrId.h`.

**RamTst087:** References to c-configuration parameter (link time) shall be placed into the `RamTst_Cfg.h` file.

## 6 Requirements Traceability

Document: AUTOSAR requirements on Basic Software, general [3]

<b>Requirement</b>	<b>Satisfied by</b>
<b>Functional Requirements</b>	
[BSW101] Initialization interface	<a href="#">RamTst007</a> , <a href="#">RamTst099</a>
[BSW004] Version check	<a href="#">RamTst080</a>
[BSW159] Tool-based configuration	Both static and runtime configuration parameters are located outside the source code of the module. This is the prerequisite for automatic configuration.
[BSW167] Static configuration checking	
[BSW168] Diagnostic interface of SW components	Not applicable (not a SW-Component)
[BSW00323] API parameter checking	<a href="#">RamTst033</a> , <a href="#">RamTst037</a> , <a href="#">RamTst039</a> , <a href="#">RamTst040</a> , <a href="#">RamTst068</a> , <a href="#">RamTst095</a> , <a href="#">RamTst115</a>
[BSW00336] Shutdown interface	Not applicable (this module does not need such a function)
[BSW00337] Classification of errors	<a href="#">RamTst067</a>
[BSW00338] Detection and reporting of development errors	<a href="#">RamTst067</a> , <a href="#">RamTst068</a> , <a href="#">RamTst069</a> , <a href="#">RamTst070</a> , <a href="#">RamTst084</a> , <a href="#">RamTst097</a> , <a href="#">RamTst116</a>
[BSW00339] Reporting of production relevant error status	<a href="#">RamTst073</a> , <a href="#">RamTst067</a> , <a href="#">RamTst076</a> , <a href="#">RamTst071</a> , <a href="#">RamTst111</a>
[BSW00344] Reference to link-time configuration	<a href="#">RamTst025</a> , <a href="#">RamTst026</a> , <a href="#">RamTst027</a> , <a href="#">RamTst066</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00345] Pre-compile-time configuration	<a href="#">RamTst065</a> , <a href="#">RamTts058</a> , <a href="#">RamTst066</a> , <a href="#">RamTst068</a> , <a href="#">RamTst070</a> , <a href="#">RamTst079</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00369] Do not return development error codes via API	<a href="#">RamTst033</a> , <a href="#">RamTst037</a> , <a href="#">RamTst039</a> , <a href="#">RamTst040</a> , <a href="#">RamTst089</a> , <a href="#">RamTst095</a>
[BSW00375] Notification of wake-up reason	Not applicable (wakeup are not supported by this module)
[BSW00380] Separate C-files for configuration parameters	<a href="#">RamTst086</a>
[BSW00381] Separate configuration header file for pre-compile time parameters	
[BSW00383] List dependencies of configuration files	Not applicable (there are no dependencies to other configuration files)
[BSW00384] List dependencies to other modules	<a href="#">RamTst072</a>
[BSW00385] List possible error notifications	<a href="#">RamTst067</a>
[BSW00386] Configuration for detecting an error	Not applicable (no configuration for error detection)
[BSW00387] Specify the configuration class of callback function	This version supports only pointer at link time.
[BSW00388] Introduce containers	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00389] Containers shall have names	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00390] Parameter content shall be unique within the module	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00391] Parameter shall have unique names	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a> Prefix "RamTst" added to each parameter
[BSW00392] Parameters shall have a type	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00393] Parameters shall have a range	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> ,

[BSW00394] Specify the scope of the parameters	<a href="#">RamTst090</a> , <a href="#">RamTst091</a> <a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a> “Local” marked as Module (template and SRS General are inconsistent)
[BSW00395] List the required parameters (per parameter)	All parameter in section 10.2 <a href="#">Containers and configuration parameters</a> are required.
[BSW00396] Configuration classes	See section 10.2.1 <a href="#">Variants</a>
[BSW00397] Pre-compile-time parameters	<a href="#">RamTst065</a> , <a href="#">RamTst066</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00398] Link-time parameters	<a href="#">RamTst066</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a>
[BSW00399] Loadable post-build time parameters	Not applicable (post build time configuration is not supported)
[BSW00400] Selectable post-build time parameters	Not applicable (post build time configuration is not supported)
[BSW00402] Published information	<a href="#">RamTst080</a> , <a href="#">RamTst081</a> , <a href="#">RamTst118</a>
[BSW00404] Reference to post build time configuration	Not applicable (post build time configuration is not supported)
[BSW00405] Reference to multiple configuration sets	Not applicable (post build time is not supported)
[BSW00406] Check module initialization	<a href="#">RamTst006</a> , <a href="#">RamTst012</a> , <a href="#">RamTst013</a>
[BSW00407] Function to read out published parameters	<a href="#">RamTst078</a> , <a href="#">RamTst079</a> , <a href="#">RamTst109</a>
[BSW00409] Header files for production code error IDs	
[BSW00412] Separate H-file for configuration parameters	<a href="#">RamTst087</a>
[BSW00416] Sequence of Initialization	Not applicable (this is a general software integration requirement)
[BSW00417] Reporting of error events by non-basic software	Not applicable (this is a basic software module)
[BSW00419] Separate C-files for pre-compile time configuration parameters	
[BSW00422] Debouncing of production relevant error status	Not applicable (it makes no sense to debounce a Ram error)
[BSW00423] Usage of SW-C template to describe BSW modules with AUTOSAR interfaces	Not applicable (this module has no connection to the RTE)
[BSW00424] BSW main processing function task allocation	Not applicable (the scheduling of a BSW is not part of this SWS)
[BSW00425] Trigger conditions for schedulable objects	Not applicable (requirement for the implementer)
[BSW00426] Exclusive areas in BSW modules	Not applicable (requirement for the implementer)
[BSW00427] ISR description for BSW modules	Not applicable (this module has no interrupt service routines)
[BSW00428] Execution order dependencies of main processing functions	Not applicable (requirement for the implementer and integrator)
[BSW00429] Restricted BSW OS functionality access	Not applicable (this module does not use OS services)
[BSW00431] The BSW Scheduler module implements task bodies	Not applicable (this is a special requirement for the BSW scheduler)
[BSW00432] Modules should have separate main processing functions for read/receive and write/transmit data path	Not applicable (this module does not have send/receive functionality)
[BSW00433] Calling of main processing functions	<i>New API to be defined to support this requirement.</i>
[BSW00434] The Schedule Module shall provide an API for exclusive areas	Not applicable (this is a special requirement for the BSW)

	scheduler)
[BSW00437] No-init area in RAM	Not applicable (this is a requirement on the memory manager)
[BSW00438] Post-build configuration data structure	Not applicable (post build time configuration is not supported)
<b><i>Non-functional Requirements</i></b>	
[BSW003] Version identification	<a href="#">RamTst080</a> , <a href="#">RamTst117</a>
[BSW005] No hard coded horizontal interfaces within MCAL	Not applicable (this is a requirement on architecture)
[BSW006] Platform independency	Not applicable (requirement for the implementer)
[BSW007] HIS MISRA C	Common AUTOSAR non-functional requirement for the implementer.
[BSW009] Module User Documentation	Not applicable (requirement for the implementer)
[BSW010] Memory resource documentation	Not applicable (requirement for the implementer)
[BSW158] Separation of configuration from implementation	<a href="#">RamTst086</a>
[BSW160] Human-readable configuration data	Common AUTOSAR non-functional requirement for the implementer.
[BSW161] Microcontroller abstraction	Not applicable (this is a requirement on architecture)
[BSW162] ECU layout abstraction	Not applicable (this is a requirement on architecture)
[BSW164] Implementation of interrupt service routines	Not applicable (this module has no interrupt service routines)
[BSW170] Data for reconfiguration of AUTOSAR SW-Components	Not applicable (not a SW-Component)
[BSW171] Configurability of optional functionality	<a href="#">RamTst065</a>
[BSW172] Compatibility and documentation of scheduling strategy	Not applicable (requirement for the implementer)
[BSW00300] Module naming convention	Common AUTOSAR non-functional requirement for the implementer.
[BSW00301] Limit imported information	Not applicable (requirement for the implementer)
[BSW00302] Limit exported information	Not applicable (requirement for the implementer)
[BSW00304] AUTOSAR integer data types	See section 8.1 <a href="#">Imported types</a>
[BSW00305] Self-defined data types naming convention	See section 8.2 <a href="#">Type definitions</a>
[BSW00306] Avoid direct use of compiler and platform specific keywords	Not applicable (requirement for the implementer)
[BSW00307] Global variables naming convention	Common AUTOSAR non functional requirement for the implementer.
[BSW00308] Definition of global data	Not applicable (requirement for the implementer)
[BSW00309] Global data with read-only constraint	Not applicable (requirement for the implementer)
[BSW00310] API naming convention	See chapter 8 <a href="#">API specification</a>
[BSW00312] Shared code shall be reentrant	Not applicable (requirement for the implementer)
[BSW00314] Separation of interrupt frames and service routines	Not applicable (this module has no interrupt service routines)
[BSW00318] Format of module version numbers	<a href="#">RamTst080</a>
[BSW00321] Enumeration of module version numbers	Not applicable (requirement for the implementer)
[BSW00325] Runtime of interrupt service routines	Not applicable

	(this module has no interrupt service routines)
[BSW00326] Transition from ISRs to OS tasks	Not applicable (this module has no interrupt service routines)
[BSW00327] Error values naming convention	See section 7.2 <a href="#">Error classification</a>
[BSW00328] Avoid duplication of code	Not applicable (requirement for the implementer)
[BSW00329] Avoidance of generic interfaces	See chapter 8 <a href="#">API specification</a>
[BSW00330] Usage of macros / inline functions instead of functions	<a href="#">RamTst117</a>
[BSW00331] Separation of error and status values	<a href="#">RamTst102</a> , <a href="#">RamTst103</a> 8.2.1 <a href="#">RamTst_ExecutionStatusType</a> and 8.2.2 <a href="#">RamTst_TestResultType</a>
[BSW00333] Documentation of callback function context	Not applicable (requirement for the implementer)
[BSW00334] Provision of XML file	Not applicable (requirement for the implementer)
[BSW00335] Status values naming convention	See section 8.2 <a href="#">Type definitions</a>
[BSW00341] Microcontroller compatibility documentation	Not applicable (requirement for the implementer)
[BSW00342] Usage of source code and object code	Common AUTOSAR non-functional requirement for the implementer.
[BSW00343] Specification and configuration of time	Common AUTOSAR non-functional requirement for the implementer.
[BSW00346] Basic set of module files	<a href="#">RamTst086</a> , <a href="#">RamTst003</a>
[BSW00347] Naming separation of different instances of BSW drivers	Common AUTOSAR non-functional requirement for the implementer and integrator.
[BSW00348] Standard type header	See chapter 8.1 <a href="#">Imported types</a>
[BSW00350] Development error detection keyword	<a href="#">RamTst068</a> , <a href="#">RamTst070</a>
[BSW00353] Platform specific type header	Not applicable (requirement for the implementer)
[BSW00355] Do not redefine AUTOSAR integer data types	See section 8.2 <a href="#">Type definitions</a>
[BSW00357] Standard API return type	<a href="#">RamTst074</a> See section 8.1 <a href="#">Imported types</a>
[BSW00358] Return type of init() functions	<a href="#">RamTst099</a> See section 8.3.1 <a href="#">RamTst_Init</a>
[BSW00359] Return type of callback functions	See section 8.6.3 <a href="#">Configurable interfaces</a>
[BSW00360] Parameters of callback functions	See section 8.6.3 <a href="#">Configurable interfaces</a>
[BSW00361] Compiler specific language extension header	Not applicable (requirement for the implementer)
[BSW00370] Separation of callback interface from API	Not applicable (the notification functions will be handled via a function pointer in the configuration init structure)
[BSW00371] Do not pass function pointers via API	Not applicable (requirement for the implementer)
[BSW00373] Main processing function naming convention	<a href="#">RamTst110</a> See section 8.5.1 <a href="#">RamTst_MainFunction</a>
[BSW00374] Module vendor identification	Not applicable (requirement for the implementer)
[BSW00376] Return type and parameters of main processing functions	<a href="#">RamTst110</a> See section 8.5.1 <a href="#">RamTst_MainFunction</a>
[BSW00377] Module specific API return types	See sections 8.1 <a href="#">Imported types</a> and 8.2 <a href="#">Type definitions</a>
[BSW00378] AUTOSAR boolean type	Not applicable (requirement for the implementer)
[BSW00379] Module identification	Not applicable

	(requirement for the implementer)
[BSW00401] Documentation of multiple instances of configuration parameters	Not applicable (requirement for the implementer)
[BSW00408] Configuration parameter naming convention	See section 10.2 <a href="#">Containers and configuration parameters</a>
[BSW00410] Compiler switches shall have defined values	See section 10.2 <a href="#">Containers and configuration parameters</a>
[BSW00411] Get version info keyword	<a href="#">RamTst070</a> , <a href="#">RamTst079</a>
[BSW00413] Accessing instances of BSW modules	Not applicable (instances makes no sense for this module)
[BSW00414] Parameter of init function	<a href="#">RamTst093</a> See section 8.3.1 <a href="#">RamTst_Init</a>
[BSW00415] User dependent include files	<a href="#">RamTst003</a>
[BSW00435] Module header file structure for the basic software scheduler	<a href="#">RamTst003</a>
[BSW00436] Module header file structure for the basic software memory mapping	<a href="#">RamTst003</a>

Document: AUTOSAR requirements on Basic Software, cluster SPAL, General Requirements [4]

<b>Requirement</b>	<b>Satisfied by</b>
<b>General Requirements</b>	
[BSW157] Notification mechanisms of drivers and handlers	<a href="#">RamTst042</a> , <a href="#">RamTst043</a> , <a href="#">RamTst044</a> , <a href="#">RamTst045</a> , <a href="#">RamTst046</a> , <a href="#">RamTst066</a>
[BSW12056] Configuration of notification mechanisms	<a href="#">RamTst042</a> , <a href="#">RamTst043</a> , <a href="#">RamTst044</a> , <a href="#">RamTst045</a> , <a href="#">RamTst046</a> , <a href="#">RamTst066</a>
[BSW12057] Driver module initialization	<a href="#">RamTst007</a> , <a href="#">RamTst025</a> , <a href="#">RamTst026</a> , <a href="#">RamTst027</a> , <a href="#">RamTst066</a>
[BSW12063] Raw value mode	Not applicable (this module does not provide physical signals)
[BSW12064] Change of operation mode during running operation	Not applicable (only one operation mode available)
[BSW12067] Setting of wake-up conditions	Not applicable (this module has no wakeup sources)
[BSW12068] MCAL initialization sequence	Not applicable (this is a requirement for the implementer)
[BSW12069] Wake-up notification of ECU State Manager	Not applicable (this module has no wakeup sources)
[BSW12075] Use of application buffers	Not applicable (no use of a buffering mechanism)
[BSW12125] Initialization of hardware resources	Not applicable (this module accesses only RAM, so no hardware resource initialization is necessary)
[BSW12129] Resetting of interrupt flags	Not applicable (there is no interrupt service routine in this module)
[BSW12163] Driver module deinitialization	<i>New API to be defined to support this requirement.</i>
[BSW12169] Control of operation mode	<i>To be defined.</i>
[BSW12263] Object code compatible configuration concept	<a href="#">RamTst025</a> , <a href="#">RamTst026</a> , <a href="#">RamTst027</a> , <a href="#">RamTst066</a>
[BSW12267] Configuration of wake-up sources	Not applicable (this module has no wakeup sources)
[BSW12448] Behavior after development error detection	<a href="#">RamTst033</a> , <a href="#">RamTst037</a> , <a href="#">RamTst039</a> , <a href="#">RamTst040</a> , <a href="#">RamTst084</a> , <a href="#">RamTst095</a>
[BSW12461] Responsibility for register initialization	Not applicable (this module uses no registers)

[BSW12462] Provide settings for register initialization	Not applicable (this module uses no registers)
[BSW12463] Combine and forward settings for register initialization	Not applicable (this module uses no registers)
<b>Non-Functional Requirements</b>	
[BSW12077] Non-blocking implementation	<a href="#">RamTst081</a> Not applicable (requirement for the implementer)
[BSW12078] Runtime and memory efficiency	Not applicable (requirement for the implementer)
[BSW12092] Access to drivers	Not applicable (requirement for the implementer)
[BSW12264] Specification of configuration items	See chapter 10.2 <a href="#">Containers and configuration parameters</a>
[BSW12265] Configuration data shall be kept constant	Not applicable (requirement for the implementer)

Document: AUTOSAR Requirements on Basic Software, Cluster SPAL, RAM Test [3]

<b>Requirement</b>	<b>Satisfied by</b>
[BSW13800] Number of tested cells shall be changeable at runtime	<a href="#">RamTst026</a> , <a href="#">RamTst036</a> , <a href="#">RamTst107</a>
[BSW13801] Test cell size shall be configurable at pre-compile time	<a href="#">RamTst049</a> , <a href="#">RamTst090</a>
[BSW13802] Multiple RAM areas shall be configurable at post build/ link time	<a href="#">RamTst026</a> , <a href="#">RamTst091</a>
[BSW13803] A subset of available RAM Test algorithms shall be selectable at pre-compile time	<a href="#">RamTst026</a> , <a href="#">RamTst027</a> , <a href="#">RamTst063</a> , <a href="#">RamTst065</a> , <a href="#">RamTst083</a> , <a href="#">RamTst084</a> , <a href="#">RamTst085</a> , <a href="#">RamTst097</a> , <a href="#">RamTst105</a>
[BSW13804] A subset of the pre-compile time selected RAM Test algorithms shall be selectable at runtime	<a href="#">RamTst021</a> , <a href="#">RamTst083</a> , <a href="#">RamTst105</a> , <a href="#">RamTst106</a>
[BSW13805] Checkerboard test algorithm shall be available	<a href="#">RamTst050</a> See sections 8.2.3 RamTst_AlgorithmType and section 10.2 Containers and Configuration Parameters
[BSW13806] Walk path test algorithm shall be available	<a href="#">RamTst052</a> See sections 8.2.3 RamTst_AlgorithmType and section 10.2 Containers and Configuration Parameters
[BSW13807] March test algorithm shall be available	<a href="#">RamTst051</a> See sections 8.2.3 RamTst_AlgorithmType and section 10.2 Containers and Configuration Parameters
[BSW13808] Galpat test algorithm shall be available	<a href="#">RamTst053</a> See sections 8.2.3 RamTst_AlgorithmType and section 10.2 Containers and Configuration Parameters
[BSW13809] RAM Test execution management	<a href="#">RamTst008</a> , <a href="#">RamTst026</a> , <a href="#">RamTst059</a> , <a href="#">RamTst070</a> , <a href="#">RamTst090</a> , <a href="#">RamTst091</a> , <a href="#">RamTst107</a> , <a href="#">RamTst108</a>
[BSW13810] Current status of RAM Test execution per block shall be available through a get status interface	<a href="#">RamTst010</a> , <a href="#">RamTst011</a> , <a href="#">RamTst019</a> , <a href="#">RamTst024</a> , <a href="#">RamTst038</a> , <a href="#">RamTst104</a>
[BSW13811] Non-destructive RAM Test	<a href="#">RamTst060</a> , <a href="#">RamTst061</a>
[BSW13812] Destructive RAM Test	<a href="#">RamTst061</a>
[BSW13813] Abraham test algorithm shall be	<a href="#">RamTst055</a>

available	See sections 8.2.3 RamTst_AlgorithmType and section 10.2 Containers and Configuration Parameters
[BSW13816] Effects of instruction / data queue shall be taken into account	<a href="#">RamTst062</a>
[BSW13818] Transparent Galpat test algorithm shall be available	<a href="#">RamTst054</a> See sections 8.2.3 RamTst_AlgorithmType and section 10.2 Containers and Configuration Parameters
[BSW13820] RAM Test execution status shall be provided by a notification mechanism	<a href="#">RamTst042</a> , <a href="#">RamTst043</a> , <a href="#">RamTst044</a> , <a href="#">RamTst045</a> , <a href="#">RamTst046</a> , <a href="#">RamTst113</a> , <a href="#">RamTst114</a>
[BSW13821] The RAM Test Module shall be designed to fulfill SIL3 Requirements	<a href="#">RamTst050</a> , <a href="#">RamTst051</a> , <a href="#">RamTst052</a> , <a href="#">RamTst053</a> , <a href="#">RamTst054</a> , <a href="#">RamTst055</a>

Implementation requirements originating within this SWS document.

<b>Requirement</b>
<a href="#">RamTst002</a>
<a href="#">RamTst005</a> , <a href="#">RamTst082</a>
<a href="#">RamTst009</a>
<a href="#">RamTst014</a>
<a href="#">RamTst018</a>
<a href="#">RamTst047</a>
<a href="#">RamTst082</a>
<a href="#">RamTst094</a>
<a href="#">RamTst096</a> (should be a general requirement?)
<a href="#">RamTst100</a> (should be an SRS requirement)
<a href="#">RamTst101</a> (should be an SRS requirement)

## 7 Functional Specification

### 7.1 Requirements

**RamTst005:** The RAM Test module shall provide the RAM test as an asynchronous service.

**RamTst063:** The configuration process for the RAM Test module shall allow the selection of a subset of different RAM Test algorithms during pre-compile time.

This subset is to be chosen from the different RAM Test algorithms as specified in [RamTst050](#), [RamTst051](#), [RamTst052](#), [RamTst053](#), [RamTst054](#), [RamTst055](#).

**RamTst060:** If non-destructive RAM Test is chosen, the RAM Test module shall save the RAM area to be tested before the module modifies it. The RAM Test module shall execute the complete procedure (saving, changing, restoring) without interruption.

**RamTst061:** For both the destructive and non-destructive options, the RAM Test module shall ensure that the test algorithm does not overwrite the RAM Test internal variables.

**RamTst062:** After writing to a cell and before reading back, the RAM Test module shall provide the possibility to inject instruction(s) forcing the controller to clear its CPU internal cache.

**RamTst050:** The RAM Test module shall provide a checkerboard test algorithm as stated in [11], A.5.1.

**RamTst051:** The RAM Test module shall provide a March test algorithm as stated in [11], A.5.1.

**RamTst052:** The RAM Test module shall provide a WalkPath test algorithm as stated in [11], A.5.2.

**RamTst053:** The RAM Test module shall provide a Galpat test algorithm as stated in [11], A.5.3.

**RamTst054:** The RAM Test module shall provide a Transparent Galpat test algorithm as stated in, [11], A.5.3.

**RamTst055:** The RAM Test module shall provide an Abraham test algorithm as stated in [11], A.5.4.

## 7.2 Error classification

**RamTst073:** Values for production code Event Ids are assigned externally by the configuration of the DEM. They are published in the file `Dem_IntErrId.h` and included via `Dem.h`.

**RamTst074:** Development error values are of type uint8.

**RamTst067:** The following errors and exceptions shall be detectable by the RAM Test depending on its build version (development/production mode):

Type or error	Relevance	Related error code	Value [hex]	Requirement
Failure within RAM Test execution status	Development	RAMTST_E_STATUS_FAILURE	0x01	<a href="#">RamTst033</a> , <a href="#">RamTst037</a> , <a href="#">RamTst095</a> , <a href="#">RamTst097</a>
API parameter out of specified range	Development	RAMTST_E_OUT_OF_RANGE	0x02	<a href="#">RamTst039</a> , <a href="#">RamTst040</a> , <a href="#">RamTst084</a>
API service used without module initialization	Development	RAMTST_E_UNINIT	0x03	<a href="#">RamTst089</a>
RAM Failure	Production	RAMTST_E_RAM_FAILURE	Assigned by DEM	<a href="#">RamTst011</a>

## 7.3 Error detection

**RamTst068:** The detection of development errors is configurable (ON / OFF) at pre-compile time. The switch `RamTstDevErrorDetect` (see chapter 10) shall activate or deactivate the detection of all development errors.

**RamTst115:** If the `RamTstDevErrorDetect` switch is enabled, API parameter checking is enabled. The detailed description of the detected errors can be found in section 7.2 and chapter 8.

**RamTst076:** The detection of production code errors cannot be switched off.

**RamTst089:** The function `RamTst_Init` shall be called first before calling any other RAM test functions. If this sequence is not respected, the error code `RAMTST_E_UNINIT` shall be reported to the Development Error Tracer (if development error detection is enabled).

## 7.4 Error notification

**RamTst069:** Additional errors that are detected because of specific implementation and/or specific hardware properties shall be added in the RAM Test device specific implementation specification. The classification and enumeration shall be compatible to the errors listed above in [RamTst067](#).

**RamTst071:** Production errors shall be reported to Diagnostic Event Manager (DEM) via the Dem\_ReportErrorStatus API.

**RamTst116:** Detected development errors shall be reported to the Det\_ReportError service of the Development Error Tracer (DET) if the pre-processor switch RamTstDevErrorDetect is set (see chapter 10).

## 8 API Specification

### 8.1 Imported types

This chapter lists data type definitions for the included variables and constants.

**RamTst098:**

<b>Header file</b>	<b>Imported Type</b>
Dem_Types.h	Dem_EventIdType
Std_Types.h	Std_VersionInfoType

### 8.2 Type definitions

#### 8.2.1 RamTst\_ExecutionStatusType

<b>Name:</b>	RamTst_ExecutionStatusType	
<b>Type:</b>	Enumeration	
<b>Range:</b>	RAMTST_EXECUTION_UNINIT	The RAM Test is not initialized or not usable.
	RAMTST_EXECUTION_INIT	The RAM Test is initialized and ready to be started.
	RAMTST_EXECUTION_RUNNING	The RAM Test is currently running.
	RAMTST_EXECUTION_STOPPED	The RAM Test is stopped.
	RAMTST_EXECUTION_SUSPENDED	The RAM Test is waiting to be resumed.
	RAMTST_EXECUTION_ALLOWED	The RAM Test is allowed to continue (ALLOW or RESUME was called).
	RAMTST_EXECUTION_STATE_UNDEFINED	State used for manufacturer's white box testing.
<b>Description:</b>	This is a status value returned by the API service RamTst_GetExecutionStatus().	

**RamTst006:** For the type RamTst\_ExecutionStatusType, the enumeration value RAMTST\_EXECUTION\_UNINIT shall be the default value after a reset. This enumeration value shall have the numeric value 0.

#### 8.2.2 RamTst\_TestResultType

<b>Name:</b>	RamTst_TestResultType	
<b>Type:</b>	Enumeration	
<b>Range:</b>	RAMTST_RESULT_NOT_TESTED	The RAM Test is not executed.
	RAMTST_RESULT_OK	The RAM Test has been tested with OK result
	RAMTST_RESULT_NOT_OK	The RAM Test has been tested with NOT-OK result.
	RAMTST_RESULT_UNDEFINED	The RAM Test is currently running.
<b>Description:</b>	This is a status value returned by the API service RamTst_GetTestResult().	

**RamTst012:** For the type RamTst\_TestResultType, the enumeration value RAMTST\_RESULT\_NOT\_TESTED shall be the default value after a reset. This enumeration value shall have the numeric value 0.

### 8.2.3 RamTst\_AlgorithmType

<b>Name:</b>	RamTst_AlgorithmType	
<b>Type:</b>	Enumeration	
<b>Range:</b>	RAMTST_ALGORITHM_UNDEFINED	Undefined algorithm (uninitialized value)
	RAMTST_CHECKERBOARD_TEST	Checkerboard test algorithm
	RAMTST_MARCH_TEST	March test algorithm
	RAMTST_WALK_PATH_TEST	Walk path test algorithm
	RAMTST_GALPAT_TEST	Galpat test algorithm
	RAMTST_TRANSP_GALPAT_TEST	Transparent Galpat test algorithm
	RAMTST_ABRAHAM_TEST	Abraham test algorithm
<b>Description:</b>	This is a value returned by the API service RamTst_GetTestAlgorithm().	

**RamTst013:** For the type RamTst\_AlgorithmType, the enumeration value RAMTST\_ALGORITHM\_UNDEFINED shall be the default value after reset. This enumeration value shall have the numeric value 0.

**RamTst058:** The type RamTst\_AlgorithmType shall contain only the enumerations of the algorithms selected at pre-compile time.

### 8.2.4 RamTst\_ConfigType

<b>Name:</b>	RamTst_ConfigType	
<b>Type:</b>	Structure	
<b>Range:</b>	Implementation specific.	
<b>Description:</b>	This type of the external data structure shall contain the initialization data for the RAM Test	

**RamTst025:** The type RamTst\_ConfigType shall denote the external data structure which contains the configuration data for the RAM Test module.

**RamTst026:** Within the configuration data for the RAM Test module, there shall be an algorithm specific configuration container for each test algorithm that was pre-compile selected to be available to the user, as listed in the RamTst\_Algorithm type. The test algorithm configuration container is defined in RamTstAlgParams.

**RamTst027:** Within the configuration data for the RAM Test module, each test algorithm listed in the RamTst\_Algorithm type and defined in a RamTstAlgParams container as required in [RamTst026](#) shall also have memory block configuration containers. The memory block configuration container is defined in RamTstBlockParams. The number of memory block configuration containers is defined by the integrator according to the RAM test strategy.

## 8.2.5 RamTst\_NumberOfTestedCellsType

<b>Name:</b>	RamTst_NumberOfTestedCellsType
<b>Type:</b>	uint8,uint16,uint32
<b>Range:</b>	1 .. 2 <sup>n-1</sup> --
<b>Description:</b>	Data type of number of tested RAM cells

## 8.3 Function definitions

This is a list of functions provided for upper layer modules.

### 8.3.1 RamTst\_Init

**RamTst099:**

<b>Service name:</b>	RamTst_Init
<b>Syntax:</b>	void RamTst_Init( )
<b>Service ID[hex]:</b>	0x00
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service for RAM Test initialization.

Note: See also [RamTst093: in 10.2.1 Variants](#).

**RamTst007:** The function RamTst\_Init shall initialize all RAM Test relevant registers and global variables and change the execution status to RAMTST\_EXECUTION\_INIT. The test is initialized to use the default test algorithm as configured by its RamTstAlgParams container.

**RamTst096:** The RamTest\_Init function shall be called only once after a reset, unless a RamTst\_Deinit call is made before calling RamTst\_Init again.

Note: The RAM test starts at the first call of RamTst\_MainFunction.

The function RamTst\_Init requires the configuration container ["RamTstConfigParams"](#).

### 8.3.2 RamTst\_Deinit

**RamTst146:**

<b>Service name:</b>	RamTst_Delnit
<b>Syntax:</b>	void RamTst_DeInit() )
<b>Service ID[hex]:</b>	0x0c
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service for RAM Test deinitialization.

**RamTst147:** The function RamTst\_DeInit shall deinitialize all RAM Test relevant registers and global variables that were initialized by RamTst\_Init.

If the RAM Test is in the “terminated” state after a RamTst\_Delnit call, a call to any RamTst Module function may result in unknown software behavior.

### 8.3.3 RamTst\_Stop

**RamTst100:**

<b>Service name:</b>	RamTst_Stop
<b>Syntax:</b>	void RamTst_Stop() )
<b>Service ID[hex]:</b>	0x02
<b>Sync/Async:</b>	Asynchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service for stopping the RAM Test.

**RamTst014:** When the RamTst\_Stop function is called, RamTst\_MainFunction shall finish the current atomic sequence it is running, then go to the STOPPED state and change the execution status to RAMTST\_EXECUTION\_STOPPED. Test status is retained, but test parameters and loop data are not. The test algorithm is set to the default test algorithm.

**RamTst148:** After a RamTst\_Stop call, RamTst\_MainFunction shall not begin testing again when called by the scheduler until after a RamTst\_Allow call.

**RamTst033:** If the DET is enabled and the execution status of the RAM Test is not RAMTST\_EXECUTION\_RUNNING or RAMTST\_EXECUTION\_PAUSED, the function RamTst\_Stop shall report the error value RAMTST\_E\_STATUS\_FAILURE to the DET, and then immediately return from the function.

The function RamTst\_Stop requires the configuration parameter RamTstStopApi within the container "[RamTstCommon](#)".

### 8.3.4 RamTst\_Allow

#### RamTst149:

<b>Service name:</b>	RamTst_Allow
<b>Syntax:</b>	void RamTst_Allow( )
<b>Service ID[hex]:</b>	0x03
<b>Sync/Async:</b>	Asynchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service for continuing the RAM Test after calling 'RamTst_Stop'.

The function RamTst\_Allow requires the configuration parameter RAMTST\_STOP\_ALLOW within the container "[RamTstCommon](#)".

### 8.3.5 RamTst\_Suspend

#### RamTst150:

<b>Service name:</b>	RamTst_Suspend
<b>Syntax:</b>	void RamTst_Suspend( )
<b>Service ID[hex]:</b>	0x0d
<b>Sync/Async:</b>	Asynchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service for suspending current operation of the RAM Test, until RESUME is called.

The function RamTst\_Suspend requires the configuration parameter RAMTST\_SUSPEND\_API within the container "[RamTstCommon](#)".

### 8.3.6 RamTst\_Resume

#### RamTst101:

<b>Service name:</b>	RamTst_Resume
<b>Syntax:</b>	void RamTst_Resume( )
<b>Service ID[hex]:</b>	0x0e
<b>Sync/Async:</b>	Asynchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service for continuing the RAM Test at the point it was suspended.

**RamTst018:** The function `RamTst_Resume` shall change the execution status to `RAMTST_EXECUTION_RESUME` when commanded to continue.

**RamTst037:** If DET is enabled and the execution status of the RAM Test module is not `RAMTST_EXECUTION_STOPPED`, the RAM Test module shall report the error value `RAMTST_E_STATUS_FAILURE` to the DET, and then immediately return from the function.

The function `RamTst_Resume` requires the configuration parameter `RAMTST_RESUME_API` within the container ["RamTstCommon"](#).

### 8.3.7 RamTst\_GetExecutionStatus

#### RamTst102:

<b>Service name:</b>	RamTst_GetExecutionStatus	
<b>Syntax:</b>	RamTst_ExecutionStatusType RamTst_GetExecutionStatus( )	
<b>Service ID[hex]:</b>	0x04	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	None	
<b>Parameters (in-out):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	RamTst_ExecutionStatusType	See type definition
<b>Description:</b>	Service returns the current RAM Test execution status.	

**RamTst019:** The function `RamTst_GetExecutionStatus` shall return the current RAM Test execution status.

The function `RamTst_GetExecutionStatus` requires the configuration parameter `RamTstGetExecutionStatusApi` within the container "[RamTstCommon](#)".

### 8.3.8 RamTst\_GetTestResult

**RamTst103:**

<b>Service name:</b>	RamTst_GetTestResult	
<b>Syntax:</b>	<code>RamTst_TestResultType RamTst_GetTestResult()</code>	
<b>Service ID[hex]:</b>	0x05	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	None	
<b>Parameters (in-out):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	<code>RamTst_TestResultType</code>	See type definition
<b>Description:</b>	Service returns the current RAM Test result.	

**RamTst024:** The function `RamTst_GetTestResult` shall return the current RAM test result.

The function `RamTst_GetTestResult` requires the configuration parameter `RamTstGetTestResultApi` within the container "[RamTstCommon](#)".

### 8.3.9 RamTst\_GetTestResultPerBlock

**RamTst104:**

<b>Service name:</b>	RamTst_GetTestResultPerBlock	
<b>Syntax:</b>	<code>RamTst_TestResultType RamTst_GetTestResultPerBlock( RamTst_NumberOfBlocksType BlockID )</code>	
<b>Service ID[hex]:</b>	0x06	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	BlockID	Number of blocks
<b>Parameters (in-out):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	<code>RamTst_TestResultType</code>	See type definition
<b>Description:</b>	Service returns the current RAM Test result for the specified block.	

**RamTst038:** The function `RamTst_GetTestResultPerBlock` shall return the current RAM test result for the specified block.

**RamTst039:** If DET is enabled and the BlockID is out of range, the function `RamTst_GetTestResultPerBlock` shall report the error value

RAMTST\_E\_OUT\_OF\_RANGE to the DET and return the test result value RAMTST\_RESULT\_STATE\_UNDEFINED.

The function RamTst\_GetTestResultPerBlock requires the configuration parameter RamTstGetTestResultPerBlockApi within the container "[RamTstCommon](#)".

### 8.3.10 RamTst\_GetVersionInfo

**RamTst109:**

<b>Service name:</b>	RamTst_GetVersionInfo
<b>Syntax:</b>	void RamTst_GetVersionInfo( Std_VersionInfoType* versioninfo )
<b>Service ID[hex]:</b>	0x0a
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	versioninfo Pointer to the location / address where to store the version information of this module.
<b>Return value:</b>	None
<b>Description:</b>	Service returns the version information of this module.

**RamTst078:** The function RamTst\_GetVersionInfo shall return the version information of this module. The version information includes:

- Module Id
- Vendor Id
- Vendor specific version numbers (BSW00407).

**RamTst079:** The function RamTst\_GetVersionInfo shall be configurable at pre-compile time (On/Off) by the configuration parameter RamTstVersionInfoApi in the container "[RamTstCommon](#)".

**RamTst117:** If source code for caller and callee of RamTst\_GetVersionInfo is available, the RAM test module should realize RamTst\_GetVersionInfo as a macro, defined in the module's header file.

### 8.3.11 RamTst\_GetTestAlgorithm

**RamTst106:**

<b>Service name:</b>	RamTst_GetTestAlgorithm
<b>Syntax:</b>	RamTst_AlgorithmType RamTst_GetTestAlgorithm( )
<b>Service ID[hex]:</b>	0x07
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant

<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	RamTst_AlgorithmType   See type definition
<b>Description:</b>	Service returns the current RAM Test algorithm ID.

**RamTst021:** The function RamTst\_GetTestAlgorithm shall return the current RAM Test algorithm ID.

The function RamTst\_GetTestAlgorithm requires the configuration parameter RamTstGetTestAlgorithmApi within the container "[RamTstCommon](#)".

### 8.3.12 RamTst\_GetNumberOfTestedCells

**RamTst108:**

<b>Service name:</b>	RamTst_GetNumberOfTestedCells
<b>Syntax:</b>	RamTst_NumberOfTestedCellsType RamTst_GetNumberOfTestedCells() )
<b>Service ID[hex]:</b>	0x09
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	RamTst_NumberOfTestedCellsType Number of currently tested cells of RAM Test will be returned.
<b>Description:</b>	Service returns the current number of tested cells per cycle.

**RamTst034:** The function RamTst\_GetNumberofTestedCells shall read the current number of tested cells per cycle.

The function RamTst\_GetNumberofTestedCells requires the configuration parameter RamTstGetNumberOfTestedCellsApi in the container "[RamTstCommon](#)".

### 8.3.13 RamTst\_ChangeTestAlgorithm

**RamTst105:**

<b>Service name:</b>	RamTst_ChangeTestAlgorithm
<b>Syntax:</b>	void RamTst_ChangeTestAlgorithm( RamTst_AlgorithmType NewTestAlgorithm )
<b>Service ID[hex]:</b>	0x0b
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	NewTestAlgorithm   See type definition RamTst_AlgorithmType

<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Service changes the used TestAlgorithm.

**RamTst083:** The function `RamTst_ChangeTestAlgorithm` shall change the test algorithm used by the RAM Test module to the new test algorithm given as parameter.

The test algorithm is initialized by the `RamTst_Init` function with the configuration parameter `DefaultTestAlgorithm`.

**RamTst085:** The function `RamTst_ChangeTestAlgorithm` shall re-initialize all RAM Test relevant registers and global variables with the values for the “NewTestAlgorithm”.

**RamTst084:** If DET is enabled and the parameter “NewTestAlgorithm” is out of range, the function `RamTst_ChangeTestAlgorithm` shall report the error value `RAMTST_E_OUT_OF_RANGE` to the DET, leaving the current `TestAlgorithm` unchanged.

**RamTst097:** If DET is enabled and the execution status of the RAM Test module is not `RAMTST_EXECUTION_STOPPED`, the function `RamTst_ChangeTestAlgorithm` shall report the error value `RAMTST_E_STATUS_FAILURE` to the DET, then immediately return from the function.

**RamTst094:** The function `RamTst_ChangeTestAlgorithm` shall not change the test result status (of type `RamTst_TestResultType`). The function shall leave the result of the previous test valid.

The function `RamTst_ChangeTestAlgorithm` requires configuration of the default value in `RamTst_ConfigType`:

- Container: `RamTstConfigParams`
- Parameter: `DefaultTestAlgorithm`

The function `RamTst_ChangeTestAlgorithm` also requires the configuration parameter `RamTstChangeTestAlgorithmApi` within the container [“RamTstCommon”](#).

### 8.3.14 RamTst\_ChangeNumberOfTestedCells

**RamTst107:**

<b>Service name:</b>	<code>RamTst_ChangeNumberOfTestedCells</code>
<b>Syntax:</b>	<pre>void RamTst_ChangeNumberOfTestedCells(     RamTst_NumberOfTestedCellsType NewNumberOfTestedCells</pre>

	)	
<b>Service ID[hex]:</b>	0x08	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Non Reentrant	
<b>Parameters (in):</b>	NewNumberOfTestedCells	See type definition
<b>Parameters (in-out):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	None	
<b>Description:</b>	Service changes the current number of tested cells.	

**RamTst036:** The function RamTst\_ChangeNumberOfTestedCells shall change the current number of tested cells.

**RamTst040:** If DET is enabled and the parameter NewNumberOfTestedCells is out of range (range: min= MinNumberOfTestedCells / max = MaxNumberOfTestedCells as defined by the integrator), the function RamTst\_ChangeNumberOfTestedCells shall report the error value RAMTST\_E\_OUT\_OF\_RANGE to the DET. The function shall leave the number of tested cells unchanged.

**RamTst095:** If the execution status of the RAM Test module is not in the status RAMTST\_EXECUTION\_STOPPED, the function RamTst\_ChangeNumberOfTestedCells shall not change the current number of tested cells but shall report the error value RAMTST\_E\_STATUS\_FAILURE to the DET.

The function RamTst\_ChangeNumberOfTestedCells requires configuration of the start value in RamTst\_ConfigType:

- Container: RamTstAlgParams
- Parameter: NumberOfTestedCells

The function RamTst\_ChangeNumberOfTestedCells also requires the configuration parameter RamTstChangeNumOfTestedCellsApi in the container "[RamTstCommon](#)".

### 8.3.15 RamTst\_ChangeMaxNumberOfTestedCells

**RamTst151:**

<b>Service name:</b>	RamTst_ChangeMaxNumberOfTestedCells	
<b>Syntax:</b>	<pre>void RamTst_ChangeMaxNumberOfTestedCells(     RamTst_NumberOfTestedCellsType NewNumberOfTestedCells )</pre>	
<b>Service ID[hex]:</b>	0x08	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Non Reentrant	
<b>Parameters (in):</b>	NewNumberOfTestedCells	See type definition
<b>Parameters (in-out):</b>	None	
<b>Parameters (out):</b>	None	

<b>Return value:</b>	None
<b>Description:</b>	Service changes the current maximum number of tested cells.

## 8.4 Callback notifications

Since the RAM Test is a driver module, it does not provide any callback functions for lower layer modules.

## 8.5 Scheduled functions

The Basic Software Scheduler calls these functions directly. The following functions shall have no return value and no parameter. All functions shall be non-reentrant.

Terms and definitions:

**Fixed cyclic:** Fixed cyclic means that one cycle time is defined at configuration and shall not be changed because functionality is requiring that fixed timing (e.g. filters).

**Variable cyclic:** Variable cyclic means that the cycle times are defined at configuration but might be mode dependent and therefore vary during runtime.

**On pre-condition:** On pre-condition means that no cycle time can be defined. The function is called when the conditions are fulfilled. Alternatively, the function may be called cyclically, however the cycle time is assigned dynamically during runtime by other modules.

### 8.5.1 RamTst\_MainFunction

**RamTst110:**

<b>Service name:</b>	RamTst_MainFunction
<b>Syntax:</b>	void RamTst_MainFunction( )
<b>Service ID[hex]:</b>	0x01
<b>Timing:</b>	VARIABLE_CYCLIC_OR_ON_PRECONDITION
<b>Description:</b>	Service for executing the RAM Test.

**RamTst008:** The function RamTst\_MainFunction shall test the defined RAM blocks, starting with the first RAM block in the RamTstConfigParams.

**RamTst009:** The function RamTst\_MainFunction shall set the RAM Test execution status from RAMTST\_EXECUTION\_INIT or RAMTST\_EXECUTION\_ALLOW to RAMTST\_EXECUTION\_RUNNING when calling the function the first time after initialization or after calling RamTst\_Stop.

**RamTst010:** The function RamTst\_MainFunction shall set the RAM Test result status of every block to RAMTST\_RESULT\_OK or RAMTST\_RESULT\_NOT\_OK depending on the result of the test.

**RamTst011:** The function RamTst\_MainFunction shall set the overall result status to RAMTST\_RESULT\_OK if all blocks are tested with result status RAMTST\_RESULT\_OK. If at least one block test result is RAMTST\_RESULT\_NOT\_OK, then the function shall set the overall test result status to RAMTST\_RESULT\_NOT\_OK regardless whether all blocks are already tested or not and report the production error RAMTST\_E\_RAM\_FAILURE to the DEM.

**RamTst047:** After the function RamTst\_MainFunction has completed testing all RAM blocks, the next call of the function RamTst\_MainFunction shall restart the test from the beginning.

**RamTst059:** The function RamTst\_MainFunction shall test the defined number of RAM cells within one call. The defined number is specified by the function RamTst\_ChangeNumberOfTestedCells or by initialization.

For pre-conditions on the function RamTst\_MainFunction, see requirement [RamTst002](#)

## 8.6 Expected Interfaces

In this chapter, all interfaces required from other modules are listed.

### 8.6.1 Mandatory Interfaces

This chapter defines all interfaces which are required to fulfill the core functionality of the module.

**RamTst111:**

<i>API function</i>	<i>Description</i>
Dem_ReportErrorStatus	Reports errors to the DEM.

### 8.6.2 Optional Interfaces

This chapter defines all interfaces, which are required to fulfill an optional functionality of the module.

**RamTst112:**

<i>API function</i>	<i>Description</i>
Det_ReportError	Service to report development errors.

### 8.6.3 Configurable interfaces

In this chapter, all interfaces are listed where the target function could be configured. The target function is usually a callback function.

#### Terms and definitions:

**Reentrant:** interface is expected to be reentrant

**Don't care:** reentrancy of interface not relevant for this module (in general, it is in this case not reentrant).

**RamTst042:** The callback notifications shall be configurable as function pointers within the initialization data structure (RamTst\_ConfigType).

**RamTst043:** The callback notifications shall have no parameters and no return value.

**RamTst044:** If a callback notification is configured as null pointer, the RAM Test module shall not execute the callback.

#### 8.6.3.1 RamTst Test Completed Notification

**RamTst113:**

<b>Service name:</b>	RamTst_Test_Completed_Notification
<b>Syntax:</b>	void RamTst_Test_Completed_Notification() )
<b>Sync/Async:</b>	--
<b>Reentrancy:</b>	Don't care
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	The function RamTst_TestCompleted shall be called every time when all RAM blocks had been tested.

**RamTst045:** The RAM Test module shall call the callback notification RamTst\_TestCompleted every time when it has tested all RAM blocks.

The callback notification RamTst\_TestCompleted requires configuration of the parameter RAMTST\_TEST\_COMPLETED\_NOTIFICATION within the container "["RamTstConfigParams"](#)".

#### 8.6.3.2 RamTst Error Notification

**RamTst114:**

<b>Service name:</b>	RamTst_Error_Notification
<b>Syntax:</b>	void RamTst_Error_Notification( )
<b>Sync/Async:</b>	--
<b>Reentrancy:</b>	Don't care
<b>Parameters (in):</b>	None
<b>Parameters (in-out):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	The function RamTst_Error shall be called every time when a RAM failure has been detected by the selected algorithm.

**RamTst046:** The RAM test module shall call the callback notification RamTst\_Error every time when the selected test algorithm has detected a RAM failure.

The callback notification RamTst\_TestCompleted requires configuration of the parameter RamTstTestErrorNotification within the container ["RamTstConfigParams"](#).

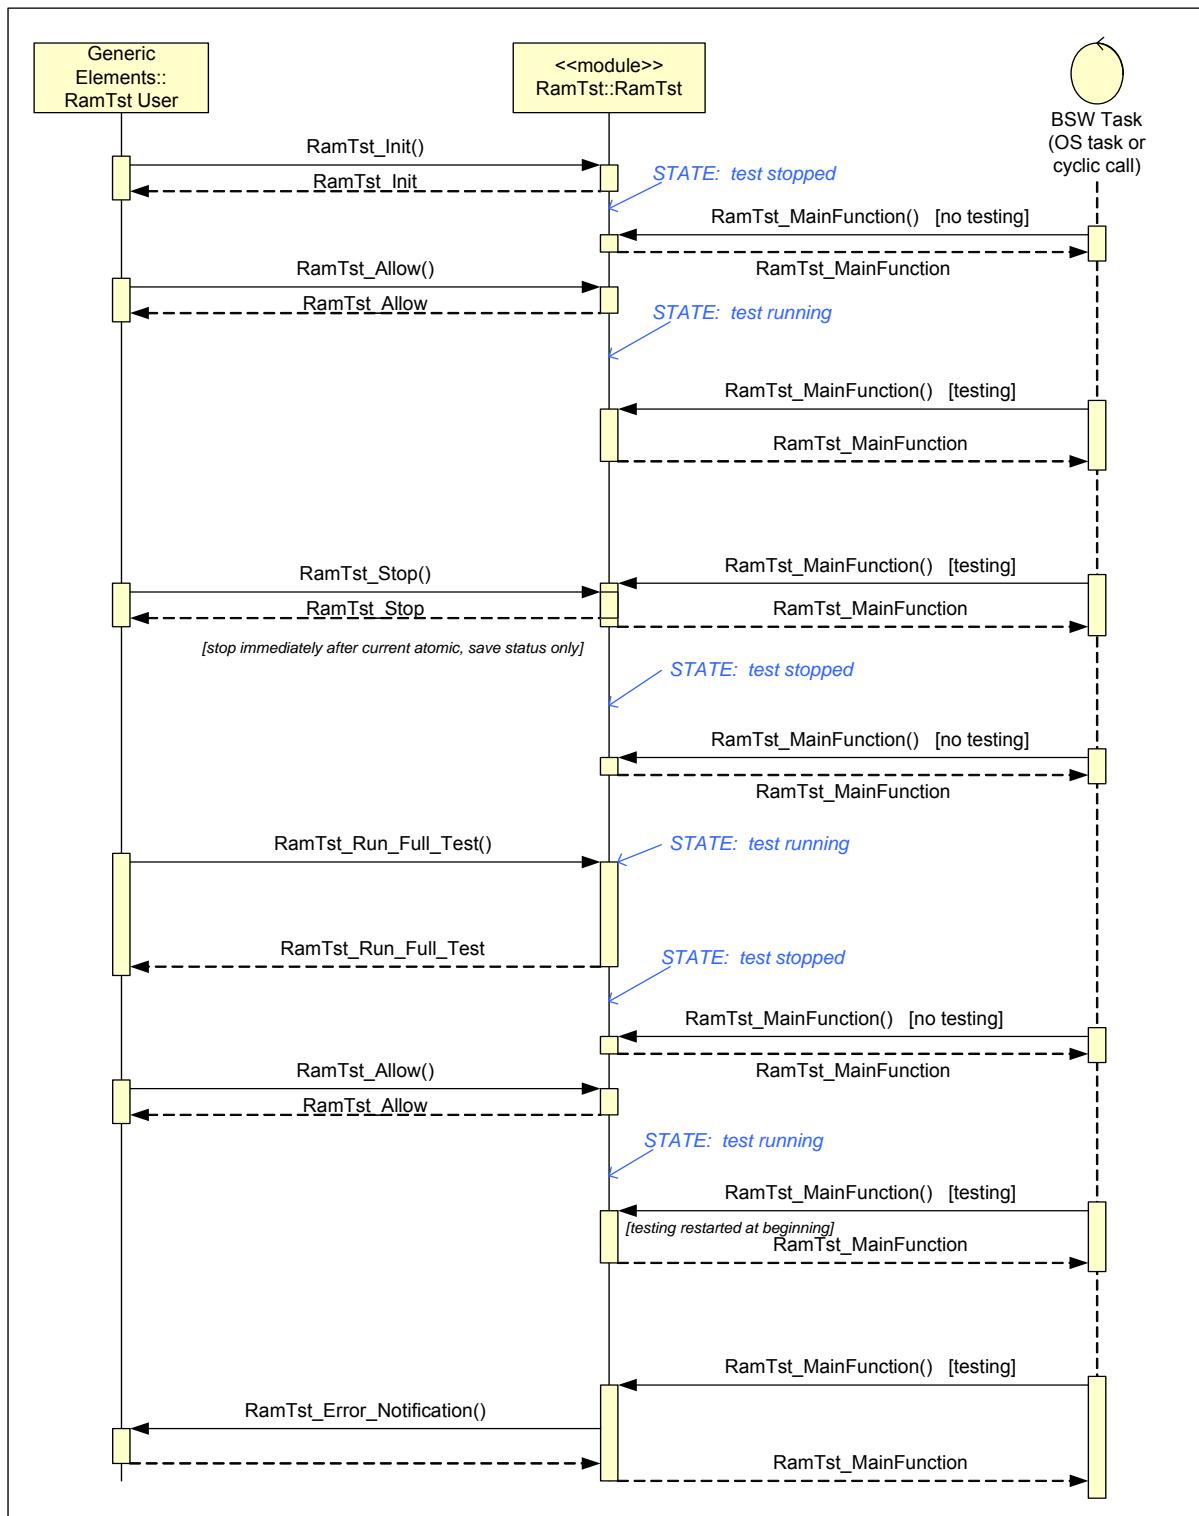

## 9 Sequence Diagrams

### 9.1 RamTst\_MainFunction (Example)

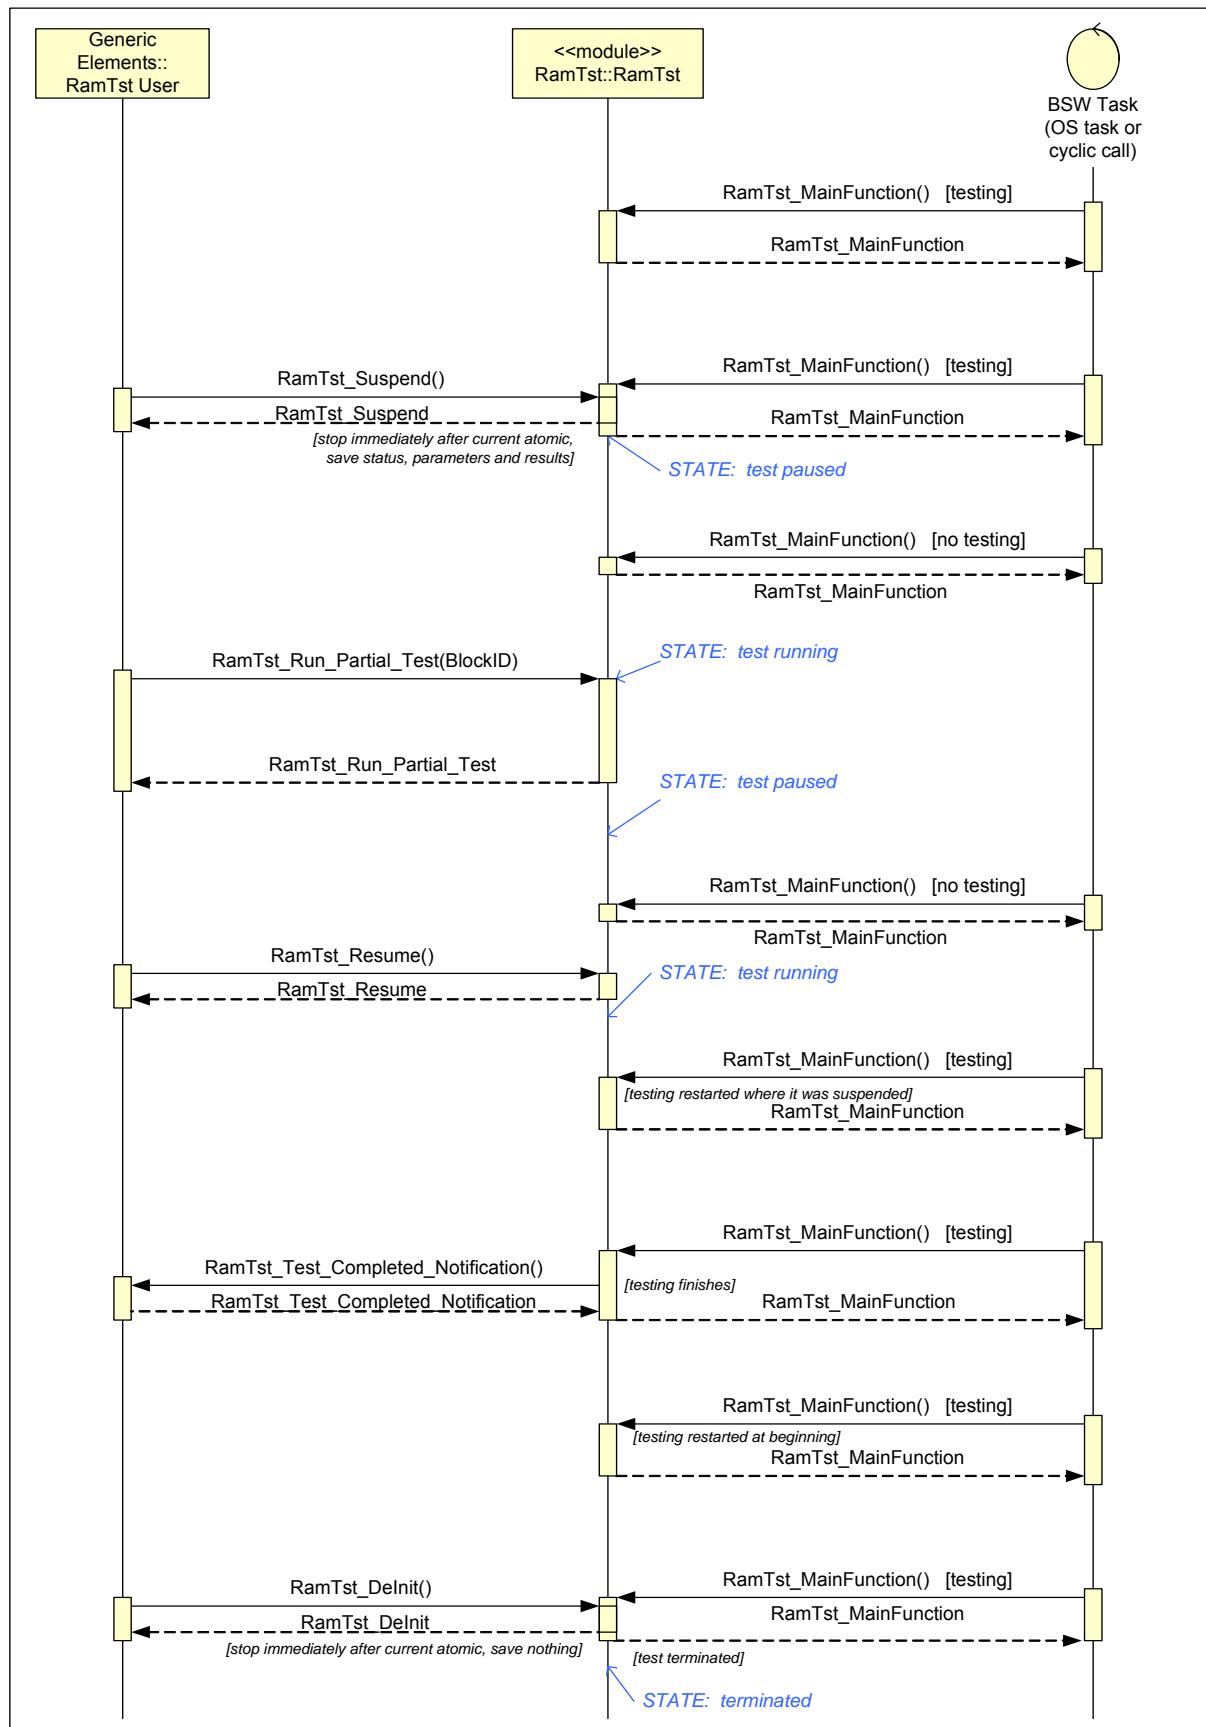

The following example sequence shows the initializaton of the RAM Test module, a foreground Run Full Test request, error notification, and the cyclic call background testing.

A cyclic background task called by a scheduler consists of several small atomic sequences in succession. At the end of each atomic sequence, the command variables are checked to see if any command has been received, and corresponding actions are taken.

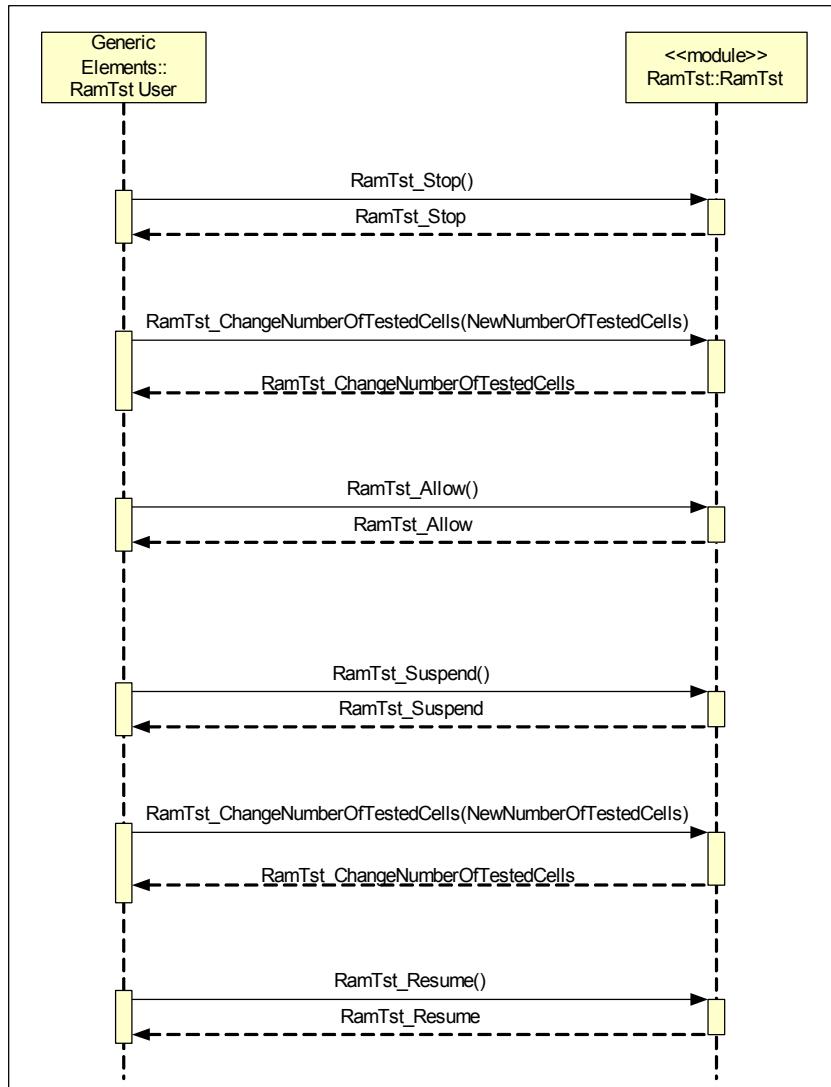

The stop request is handled following the currently running atomic sequence of the main routine, or at the next cyclic call of the main routine if it is not currently running. The allow request is handled at the next cyclic call of the main routine.

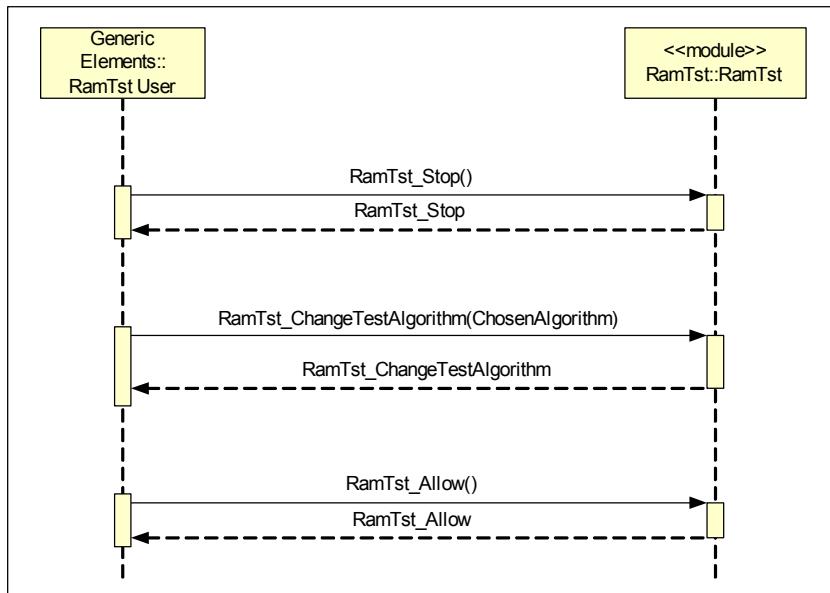

The next example shows the Suspend and Resume commands, a foreground Run Partial Test request, a Test Completed notification, and Delnit command.

## 10 Configuration Specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification, Chapter 10.1 describes fundamentals. It also specifies a template (table) that shall be used for the parameter specification. It is intended to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module RAM Test.

Chapter 10.3 specifies published information of the module RAM Test.

### 10.1 How to read this chapter

In addition to this section, it is highly recommended to read the documents:

- AUTOSAR Layered Software Architecture [2]
- AUTOSAR ECU Configuration Specification [5]
  - o This document describes the AUTOSAR configuration methodology and the AUTOSAR configuration metamodel in detail.

The following is only a short survey of the topic and it will not replace the ECU Configuration Specification document.

#### 10.1.1 Configuration and configuration parameters

Configuration parameters define the variability of the generic part(s) of an implementation of a module. This means that only generic or configurable module implementation can be adapted to the environment (software/hardware) in use during system and/or ECU configuration.

The configuration of parameters can be achieved at different times during the software process: before compile time, before link time or after build time. In the following, the term “configuration class” (of a parameter) shall be used in order to refer to a specific configuration point in time.

#### 10.1.2 Containers

Containers structure the set of configuration parameters. This means:

- *all* configuration parameters are kept in containers.
- (sub-) containers can reference (sub-) containers. It is possible to assign a multiplicity to these references. The multiplicity then defines the possible number of instances of the contained parameters.

#### 10.1.3 Specification template for configuration parameters

The following tables consist of three sections:

- the general section
- the configuration parameter section
- the section of included/referenced containers

Pre-compile time

- specifies whether the configuration parameter shall be of configuration class *Pre-compile time* or not

<b>Label</b>	<b>Description</b>
x	The configuration parameter shall be of configuration class <i>Pre-compile time</i> .
--	The configuration parameter shall never be of configuration class <i>Pre-compile time</i> .

Link time

- specifies whether the configuration parameter shall be of configuration class *Link time* or not

<b>Label</b>	<b>Description</b>
x	The configuration parameter shall be of configuration class <i>Link time</i> .
--	The configuration parameter shall never be of configuration class <i>Link time</i> .

Post Build

- specifies whether the configuration parameter shall be of configuration class *Post Build* or not

<b>Label</b>	<b>Description</b>
x	The configuration parameter shall be of configuration class <i>Post Build</i> and no specific implementation is required.
L	<i>Loadable</i> - the configuration parameter shall be of configuration class <i>Post Build</i> and only one configuration parameter set resides in the ECU.
M	<i>Multiple</i> - the configuration parameter shall be of configuration class <i>Post Build</i> and is selected out of a set of multiple parameters by passing a dedicated to the init function of the module.
--	The configuration parameter shall never be of configuration class <i>Post Build</i> .

## 10.2 Containers and Configuration Parameters

The following sections summarize the containers of RAM Test configuration parameters. The detailed descriptions of the configuration parameters are described in Chapter 8 API Specification.

### 10.2.1 Variants

Variant PC: This variant is limited to pre-compile configuration parameters only.  
The configuration parameters are fixed before compilation starts.  
The configuration of the SW element is done at the source code level.  
The intention of this variant is to optimize the parameter configuration for a source code delivery. See BSW00397.

Variant LT: This variant is limited to link time-configuration parameters only.  
The configuration parameters are fixed after compiling and before linking (locating).  
The configuration of the SW element is done at the object code level.  
The intention of this variant is to optimize the parameter configuration for an object code delivery. See BSW00398.

**RamTst093:** The initialization function of this module shall always have a “void” as parameter. This means that, in contradiction to BSW00414 only one interface for initialization shall be implemented and it shall not depend on the modules configuration which interface the calling software module shall use.

### 10.2.2 RamTst

<b>Module Name</b>	RamTst
<b>Module Description</b>	Configuration of the RamTst module.

<b>Included Containers</b>		
<b>Container Name</b>	<b>Multiplicity</b>	<b>Scope / Dependency</b>
RamTstCommon	1	This container holds a list of all available functions in the RamTst module. Each function is turned ON or OFF before compiling so that only the desired test algorithms are in the compiled code.

### 10.2.3 RamTstCommon

<b>SWS Item</b>	RamTst070 :
<b>Container Name</b>	RamTstCommon{RamTst_Common}
<b>Description</b>	This container holds a list of all available functions in the RamTst module. Each function is turned ON or OFF before compiling so that only the desired test algorithms are in the compiled code.
<b>Configuration Parameters</b>	

<b>SWS Item</b>	<b>RamTst120 :</b>		
<b>Name</b>	RamTstAllowApi {RAMTST_ALLOW_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_Allow".		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	--		
<b>Name</b>	RamTstChangeMaxNumOfTestedCellsApi {RAMTST_CHANGE_MAX_NUMBER_OF_TESTED_CELLS_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_ChangeMaxNumberOfTestedCells".		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst118 :</b>		
<b>Name</b>	RamTstChangeNumOfTestedCellsApi {RAMTST_CHANGE_NUMBER_OF_TESTED_CELLS_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_ChangeNumberOfTestedCells"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst119 :</b>		
<b>Name</b>	RamTstChangeTestAlgorithmApi {RAMTST_CHANGE_TEST_ALGORITHM_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_ChangeTestAlgorithm"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst121 :</b>		
<b>Name</b>	RamTstDevErrorDetect {RAMTST_DEV_ERROR_DETECT}		
<b>Description</b>	Preprocessor switch to select the development error tracer (DET) ON or OFF		

<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst122 :</b>		
<b>Name</b>	RamTstGetExecutionStatusApi {RAMTST_GET_EXECUTION_STATUS_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_GetExecutionStatus"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst123 :</b>		
<b>Name</b>	RamTstGetNumberOfTestedCellsApi {RAMTST_GET_NUMBER_OF_TESTED_CELLS_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_GetNumberOfTestedCells"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst124 :</b>		
<b>Name</b>	RamTstGetTestAlgorithmApi {RAMTST_GET_TEST_ALGORITHM_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_GetTestAlgorithm"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst125 :</b>		
<b>Name</b>	RamTstGetTestResultApi {RAMTST_GET_TEST_RESULT_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_GetTestResult"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	

	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst126 :</b>		
<b>Name</b>	RamTstGetTestResultPerBlockApi {RAMTST_GET_TEST_RESULT_PER_BLOCK_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_GetTestResultPerBlock"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst128 :</b>		
<b>Name</b>	RamTstGetVersionInfoApi {RAMTST_GET_VERSION_INFO_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_GetVersionInfo"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	--		
<b>Name</b>	RamTstResumeApi {RAMTST_RESUME_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_Resume".		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst127 :</b>		
<b>Name</b>	RamTstStopApi {RAMTST_STOP_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_Stop"		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	--		
<b>Name</b>	RamTstSuspendApi {RAMTST_SUSPEND_API}		
<b>Description</b>	Preprocessor switch to disable / enable the function "RamTst_Suspend".		
<b>Multiplicity</b>	1		

<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>Included Containers</b>			
<b>Container Name</b>	<b>Multiplicity</b>	<b>Scope / Dependency</b>	
RamTstAlgorithms	1	This container holds all of the available test algorithms for the specific microcontroller. Each test algorithm is selected ON or OFF before compiling so that only the desired test algorithms are in the compiled code.	
RamTstConfigParams	1	This container specifies configuration parameters which are set at pre-compile or link time. The multiplicity of the included container depends on the pre-compile configuration in the container "RamTst_Algorithms".	

## 10.2.4 RamTstAlgorithms

<b>SWS Item</b>	RamTst065 :		
<b>Container Name</b>	RamTstAlgorithms{RamTst_Algorithms}		
<b>Description</b>	This container holds all of the available test algorithms for the specific microcontroller. Each test algorithm is selected ON or OFF before compiling so that only the desired test algorithms are in the compiled code.		
<b>Configuration Parameters</b>			

<b>SWS Item</b>	RamTst129 :		
<b>Name</b>	RamTstAbrahamTestSelected {RAMTST_ABRAHAM_TEST_SELECTED}		
<b>Description</b>	Preprocessor switch to select the Abraham Test ON or OFF		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	RamTst130 :		
<b>Name</b>	RamTstCheckerboardTestSelected {RAMTST_CHECKERBOARD_TEST_SELECTED}		
<b>Description</b>	Preprocessor switch to select the Checkerboard Test ON or OFF		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	RamTst132 :		
<b>Name</b>	RamTstGalpatTestSelected {RAMTST_GALPAT_TEST_SELECTED}		
<b>Description</b>	Preprocessor switch to select the Galpat Test ON or OFF		

<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst133 :</b>		
<b>Name</b>	RamTstMarchTestSelected {RAMTST_MARCH_TEST_SELECTED}		
<b>Description</b>	Preprocessor switch to select the March Test ON or OFF		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst134 :</b>		
<b>Name</b>	RamTstTranspGalpatTestSelected {RAMTST_TRANSP_GALPAT_TEST_SELECTED}		
<b>Description</b>	Preprocessor switch to select the Transparent Galpat Test ON or OFF		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst135 :</b>		
<b>Name</b>	RamTstWalkPathTestSelected {RAMTST_WALK_PATH_TEST_SELECTED}		
<b>Description</b>	Preprocessor switch to select the Walking Path Test ON or OFF		
<b>Multiplicity</b>	1		
<b>Type</b>	BooleanParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

#### No Included Containers

### 10.2.5 RamTstConfigParams

<b>SWS Item</b>	<b>RamTst066 :</b>		
<b>Container Name</b>	RamTstConfigParams{RamTst_ConfigParams}		
<b>Description</b>	This container specifies configuration parameters which are set at pre-compile or link time. The multiplicity of the included container depends on the pre-compile configuration in the container "RamTst_Algorithms".		

**Configuration Parameters**

<b>SWS Item</b>	<b>RamTst136 :</b>		
<b>Name</b>	RamTstDefaultTestAlgorithm {RAMTST_DEFAULT_TEST_ALGORITHM}		
<b>Description</b>	This is the default algorithm after the "RamTst_Init(..)" function. This is the initial value for a RAM variable which could be changed by the function "RamTst_ChangeTestAlgorithm"		
<b>Multiplicity</b>	1		
<b>Type</b>	EnumerationParamDef		
<b>Range</b>	RAMTST_ABRAHAM_TEST	--	
	RAMTST_CHECKERBOARD_TEST	--	
	RAMTST_GALPAT_TEST	--	
	RAMTST_MARCH_TEST	--	
	RAMTST_MOD_HAMMINGCODE_TEST	--	
	RAMTST_TRANS_P_GALPAT_TEST	--	
	RAMTST_WALK_PATH_TEST	--	
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	--		
<b>Name</b>	RamTstMinNumberOfTestedCells {RAMTST_MIN_NUMBER_OF_TESTED_CELLS}		
<b>Description</b>	Minimum number of tested cells, as defined by implementer.		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst137 :</b>		
<b>Name</b>	RamTstNumberOfAlgorithms {RAMTST_NUMBER_OF_ALGORITHMS}		
<b>Description</b>	Number of configured algorithms in the container "RamTst_Algorithms" calculationFormula = count of the container RamTst_AlgParams		
<b>Multiplicity</b>	1		
<b>Type</b>	DerivedIntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module dependency: "RamTstNumberOfAlgorithms" is derived by the count of "RamTstAlgParams" which is part of the same subContainer and has a multiplicity of 1 to *.		

<b>SWS Item</b>	<b>RamTst138 :</b>		
<b>Name</b>	RamTstTestCompletedNotification {RAMTST_TEST_COMPLETED_NOTIFICATION}		
<b>Description</b>	This function will be called after finishing the RAM test without an error.		
<b>Multiplicity</b>	1		

<b>Type</b>	FunctionNameDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPIL
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	RamTst139 :		
<b>Name</b>	RamTstTestErrorNotification {RAMTST_TEST_ERROR_NOTIFICATION}		
<b>Description</b>	This function will be called if an error occurs during the RAM test.		
<b>Multiplicity</b>	1		
<b>Type</b>	FunctionNameDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPIL
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>Included Containers</b>			
<b>Container Name</b>	<b>Multiplicity</b>	<b>Scope / Dependency</b>	
RamTstAlgParams	1..*	This container holds parameters for configuring an algorithm. Each algorithm selected in the RamTst_Algorithms container has a corresponding RamTstAlgParams container. The multiplicity of the included container depends on the number of separate blocks of RAM which are defined for the particular algorithm.	

## 10.2.6 RamTstAlgParams

<b>SWS Item</b>	RamTst090 :		
<b>Container Name</b>	RamTstAlgParams{RamTst_AlgParams}		
<b>Description</b>	This container holds parameters for configuring an algorithm. Each algorithm selected in the RamTst_Algorithms container has a corresponding RamTstAlgParams container. The multiplicity of the included container depends on the number of separate blocks of RAM which are defined for the particular algorithm.		
<b>Configuration Parameters</b>			

<b>SWS Item</b>	RamTst140 :		
<b>Name</b>	RamTstAlgorithmId {RAMTST_ALGORITHM_ID}		
<b>Description</b>	This is the algorithm ID		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPIL
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	--
<b>Name</b>	RamTstExtNumberOfTestedCells {RAMTST_EXT_NUMBER_OF_TESTED_CELLS}
<b>Description</b>	This is the absolute maximum value for the number of cells that NUM-

	BER_OF_TESTED_CELLS and MAX_NUMBER_OF_TESTED_CELLS can be.		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	--		
<b>Name</b>	RamTstMaxNumberOfTestedCells {RAMTST_MAX_NUMBER_OF_TESTED_CELLS}		
<b>Description</b>	This is the initial value for a RAM variable, which can be changed by the function "RamTst_ChangeMaxNumberOfTestedCells".		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	<b>RamTst141 :</b>		
<b>Name</b>	RamTstNumberOfBlocks {RAMTST_NUMBER_OF_BLOCKS}		
<b>Description</b>	Number of RAM blocks configured using the container "RamTst_BlockParams" calculationFormula = Count of enabled RamTstBlockParams for this algorithm ID.		
<b>Multiplicity</b>	1		
<b>Type</b>	DerivedIntegerParamDef		
<b>Default value</b>	--		
<b>calculationFormula</b>	count of enabled ramtstblockparams for this algorithm id.		
<b>calculationLanguage</b>	informal		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module dependency: "RamTstNumberOfBlocks" is derived by the count of the number of "RamTstBlockParams" containers which are part of the same subcontainer and have a multiplicity of 1 to *.		

<b>SWS Item</b>	<b>RamTst142 :</b>		
<b>Name</b>	RamTstNumberOfTestedCells {RAMTST_NUMBER_OF_TESTED_CELLS}		
<b>Description</b>	This is the initial value for a RAM variable, which can be changed by the function "RamTst_ChangeNumberOfTestedCells"		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPILE

	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

#### Included Containers

<b>Container Name</b>	<b>Multiplicity</b>	<b>Scope / Dependency</b>
RamTstBlockParams	1..*	This container holds the description for one block of RAM. For each RAM block to be tested by a given algorithm, there is one container which describes the block. Multiple instances of this container are included in RamTst_AlgParams for each algorithm selected in RamTst_Algorithms.

### 10.2.7 RamTstBlockParams

<b>SWS Item</b>	RamTst091 :		
<b>Container Name</b>	RamTstBlockParams{RamTst_BlockParams}		
<b>Description</b>	This container holds the description for one block of RAM. For each RAM block to be tested by a given algorithm, there is one container which describes the block. Multiple instances of this container are included in RamTst_AlgParams for each algorithm selected in RamTst_Algorithms.		
<b>Configuration Parameters</b>			

<b>SWS Item</b>	RamTst143 :		
<b>Name</b>	RamTstBlockId {RAMTST_BLOCK_ID}		
<b>Description</b>	ID of the RAM block		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPIL
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	RamTst144 :		
<b>Name</b>	RamTstEndAddress {RAMTST_END_ADDRESS}		
<b>Description</b>	End Address of the RAM block		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPIL
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

<b>SWS Item</b>	RamTst145 :		
<b>Name</b>	RamTstStartAddress {RAMTST_START_ADDRESS}		
<b>Description</b>	Start Address of the RAM block		
<b>Multiplicity</b>	1		
<b>Type</b>	IntegerParamDef		
<b>Default value</b>	--		
<b>ConfigurationClass</b>	<b>Pre-compile time</b>	X	VARIANT-PRE-COMPIL
	<b>Link time</b>	X	VARIANT-LINK-TIME
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: Module		

#### No Included Containers

**RamTst080:** The integration of incompatible files shall be avoided. At a minimum, the implementation shall include a version check of the header files.

For included header files:

- RAMTST\_AR\_MAJOR\_VERSION
- RAMTST\_AR\_MINOR\_VERSION

shall be identical.

For the module internal c and h files:

- RAMTST\_SW\_MAJOR\_VERSION
- RAMTST\_SW\_MINOR\_VERSION
- RAMTST\_AR\_MAJOR\_VERSION
- RAMTST\_AR\_MINOR\_VERSION
- RAMTST\_AR\_PATCH\_VERSION

shall be identical.

**RamTst081:** The implementer shall provide measured or calculated runtime information in the documentation of the module for each algorithm implementation. The information is to be presented as shown in the following table, specifying whether the parameters are measured or calculated..

Microcontroller	Frequency	RamCellSize [bit]:	No of cells/cycle	Average Runtime	Interrupt lock time	Internal used RAM
--	--	--	--	--	--	--

## 10.3 Published Information

The standard common published information like

vendorId (<Module>\_VENDOR\_ID),  
moduleId (<Module>\_MODULE\_ID),  
arMajorVersion (<Module>\_AR\_MAJOR\_VERSION),  
arMinorVersion (<Module>\_AR\_MINOR\_VERSION),  
arPatchVersion (<Module>\_AR\_PATCH\_VERSION),  
swMajorVersion (<Module>\_SW\_MAJOR\_VERSION),  
swMinorVersion (<Module>\_SW\_MINOR\_VERSION),  
swPatchVersion (<Module>\_SW\_PATCH\_VERSION),  
vendorApiInfix (<Module>\_VENDOR\_API\_INFIX)

is provided in the BSW Module Description Template (see [6] Figure 4.1 and Figure 7.1).

Additional published parameters are listed below if applicable for this module.

## 11 Changes to Version 1.0.0

### 11.1 Deleted SWS Items

SWS Item	Rationale
RamTst056	Bug 12583: Modified Hamming Code test removed
RamTst064	Bug 14103: contradiction removed
RamTst004	Bug 14242: File include structure, the internal file structure "Algo" is up to the implementer

### 11.2 Changed SWS Items

SWS Item	Rationale
<a href="#">RamTst002</a>	Bug 12356: The term "RAM area" specified more in detail
<a href="#">RamTst008</a>	Bug 12356: The term "RAM area" specified more in detail
<a href="#">RamTst045</a>	Bug 12356: The term "RAM area" specified more in detail
<a href="#">RamTst047</a>	Bug 12356: The term "RAM area" specified more in detail
<a href="#">RamTst060</a>	Bug 12356: The term "RAM area" specified more in detail
<a href="#">RamTst088</a>	Bug 13718: description extended, to make the usage more clear.
<a href="#">RamTst049</a>	Bug 14234: "RamTst_DataType" moved in the configuration area.
<a href="#">RamTst040</a>	Bug 15763: (Range: min = 1 / max = up to the implementer)
<a href="#">RamTst071</a>	Bug 12960: Dem_ReportErrorEvent changed to Dem_ReportErrorStatus
<a href="#">RamTst003</a>	Bug 14242 & 15974: File include structure updated (MemMap.h and SchM_<modul>.h) added

### 11.3 Added SWS Items

SWS Item	Rationale
<a href="#">RamTst094</a>	Bug 15155: behavior of RamTst_GetTestResult
<a href="#">RamTst095</a>	Bug 15763: behavior of the RamTst_ChangeTestAlgorithm() function, in case of a wrong sequence call order described more in detail.

## 12 Changes during SWS Improvements by Technical Office

### 12.1 Deleted SWS Items

SWS Item	Rationale
RamTst088	SWS Improvement: Requirement not ID necessary, already covered by other requirements

### 12.2 Changed SWS Items

Many requirements have been changed to improve understandability without changing the technical contents.

### 12.3 Added SWS Items

SWS Item	Rationale
<a href="#">RamTst096</a>	SWS Improvement: Requirement had no ID
<a href="#">RamTst098</a>	UML Model linking of imported types
<a href="#">RamTst099</a>	UML Model linking of RamTst_Init
<a href="#">RamTst100</a>	UML Model linking of RamTst_Stop
<a href="#">RamTst101</a>	UML Model linking of RamTst_Continue
<a href="#">RamTst102</a>	UML Model linking of RamTst_GetExecutionStatus
<a href="#">RamTst103</a>	UML Model linking of RamTst_GetTestResult
<a href="#">RamTst104</a>	UML Model linking of RamTst_GetTestResultPerBlock
<a href="#">RamTst105</a>	UML Model linking of RamTst_ChangeTestAlgorithm
<a href="#">RamTst106</a>	UML Model linking of RamTst_GetTestAlgorithm
<a href="#">RamTst107</a>	UML Model linking of RamTst_ChangeNumberOfTestedCells
<a href="#">RamTst108</a>	UML Model linking of RamTst_GetNumberOfTestedCells
<a href="#">RamTst109</a>	UML Model linking of RamTst_GetVersionInfo
<a href="#">RamTst110</a>	UML Model linking of RamTst_MainFunction
<a href="#">RamTst111</a>	UML Model linking of mandatory interface
<a href="#">RamTst112</a>	UML Model linking of optional interface
<a href="#">RamTst113</a>	UML Model linking of RamTst_Test_Completed_Notification
<a href="#">RamTst114</a>	UML Model linking of RamTst_Error_Notification
<a href="#">RamTst115</a>	Standard requirement for error detection
<a href="#">RamTst116</a>	Standard requirement for DET error notification
<a href="#">RamTst117</a>	Hint RamTst_GetVersionInfo

## 13 Changes to Version 1.1.2

### 13.1 Deleted SWS Items

<b>SWS Item</b>	<b>Rationale</b>
RamTst001	Missing from document before Technical Office review.
RamTst015	Missing from document before Technical Office review.
RamTst016	Missing from document before Technical Office review.
RamTst017	Missing from document before Technical Office review.
RamTst020	Missing from document before Technical Office review.
RamTst022	Missing from document before Technical Office review.
RamTst023	Missing from document before Technical Office review.
RamTst028	Missing from document before Technical Office review.
RamTst029	Missing from document before Technical Office review.
RamTst030	Missing from document before Technical Office review.
RamTst031	Missing from document before Technical Office review.
RamTst032	Missing from document before Technical Office review.
RamTst035	Missing from document before Technical Office review.
RamTst041	Missing from document before Technical Office review.
RamTst048	Missing from document before Technical Office review.
RamTst057	Missing from document before Technical Office review.
RamTst075	Missing from document before Technical Office review.
RamTst077	Missing from document before Technical Office review.
RamTst092	Missing from document before Technical Office review.

### 13.2 Changed SWS Items

<b>SWS Item</b>	<b>Rationale</b>

### 13.3 Added SWS Items

<b>SWS Item</b>	<b>Rationale</b>
<a href="#">RamTst118</a>	

## 14 Changes to Version 1.1.5

### 14.1 Deleted SWS Items

None

### 14.2 Changed SWS Items

None

### 14.3 Added SWS Items

SWS Item	Rationale
<a href="#">RamTst146</a>	UML Model linking of RamTst_DelInit
<a href="#">RamTst147</a>	Requirement on RamTst_DelInit
<a href="#">RamTst148</a>	Requirement on RamTst_Stop
<a href="#">RamTst149</a>	Requirement on RamTst_Allow
<a href="#">RamTst150</a>	Requirement on RamTst_Suspend
<a href="#">RamTst151</a>	Requirement on RamTst_ChangeMaxNumberOfTestedCells
