## **Advice for users**

AUTOSAR Specification Documents may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the Specification Documents for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such Specification Documents, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

## 1 Introduction and functional overview

This document specifies the AUTOSAR standard types header file. It contains all types that are used across several modules of the basic software and that are platform and compiler independent.

It is strongly recommended that those standard types files are unique within the AUTOSAR community to guarantee unique types and to avoid types changes when changing from supplier A to B.

## 2 Acronyms and abbreviations

Acronyms and abbreviations that have a local scope are not contained in the AUTOSAR glossary. These must appear in a local glossary.

| <b>Acronym:</b> | <b>Description:</b>   |
|-----------------|---|
| API             | Application Programming Interface   |
| OSEK/VDX        | Offene Systeme und deren Schnittstellen für die Elektronik im Kraftfahrzeug |

| <b>Abreviation:</b> | <b>Description:</b> |
|---------------------|---------------------|
| STD                 | Standard            |

## 4 Constraints and assumptions

### 4.1 Limitations

No limitations.

### 4.2 Applicability to car domains

Many symbols defined in this specification (like OK, NOT\_OK, ON, OFF) are already defined and used within legacy software. These conflicts ('redefinition of existing symbol') are expected, but neglected, because of the following reasons:

1. AUTOSAR has to maintain network compatibility with legacy ECUs, but no software architecture compatibility with legacy software (decision acknowledged by AUTOSAR Steering Committee, december 2004)
2. Many types are defined and used exactly in the same way that legacy software does. Legacy software can keep on using the symbols, only the definitions have to be removed and taken from this file instead.

## 5 Software Architecture

### 5.1 Dependencies to other modules

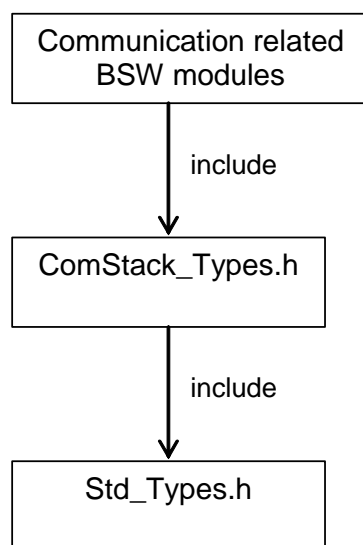

The standard types header file defines standard types based on the platform types header file (Platform\_Types.h).

### 5.2 File structure

The include structure differ between BSW modules which are part of the COM-stack and other modules. BSW modules which is considered part of the COM stack shall include the ComStack\_Types.h other modules shall include Std\_Types.h

#### 5.2.1 Communication related BSW modules

**STD016:** : The include file structure shall be as follows:

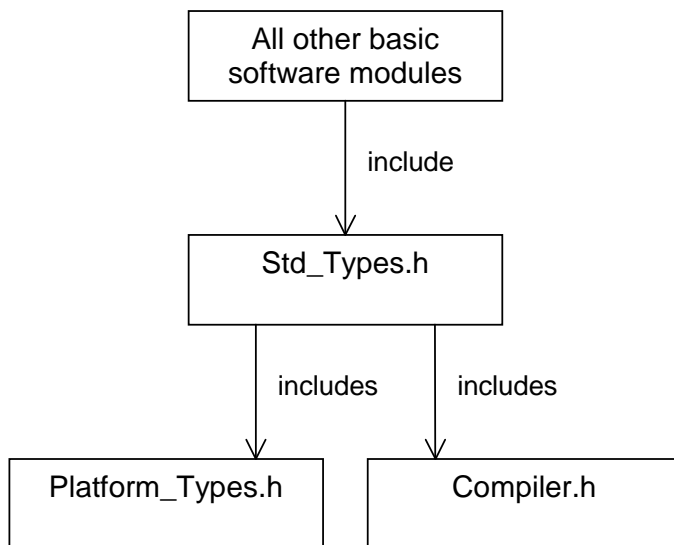

- ComStack\_Types.h shall include Std\_Types.h
- Communication related basic software modules shall include ComStack\_Types.h

## 5.2.2 Non Communication related BSW modules

**STD001:** The include file structure shall be as follows:

- Std\_Types.h shall include Platform\_Types.h
- Std\_Types.h shall include Compiler.h
- All other basic software modules shall include Std\_Types.h

## 6 Requirements traceability

Document: General Requirements on Basic Software Modules

| <b>Requirement</b>  | <b>Satisfied by</b>  |
|---|--|
| [BSW00300] Module naming convention [approved]                                    | Not applicable<br>(this is only a header file specification) |
| [BSW00301] Limit imported information [approved]                                  | Not applicable<br>(this is only a header file specification) |
| [BSW00302] Limit exported information [approved]                                  | Not applicable<br>(this is only a header file specification) |
| [BSW00304] AUTOSAR integer data types [approved]                                  | Not applicable<br>(this is only a header file specification) |
| [BSW00305] Self-defined data types naming convention [approved]                   | Not applicable<br>(this is only a header file specification) |
| [BSW00306] Avoid direct use of compiler and platform specific keywords [approved] | Not applicable<br>(this is only a header file specification) |
| [BSW00307] Global variables naming convention [approved]                          | Not applicable<br>(this is only a header file specification) |
| [BSW00308] Definition of global data [approved]                                   | Not applicable<br>(this is only a header file specification) |
| [BSW00309] Global data with read-only constraint [approved]                       | Not applicable<br>(this is only a header file specification) |
| [BSW00310] API naming convention [approved]                                       | Not applicable<br>(this is only a header file specification) |
| [BSW00312] Shared code shall be reentrant [approved]                              | Not applicable<br>(this is only a header file specification) |
| [BSW00314] Separation of interrupt frames and service routines [approved]         | Not applicable<br>(this is only a header file specification) |
| [BSW00318] Format of module version numbers [approved]                            | <a href="#">STD002</a>                                       |
| [BSW00321] Enumeration of module version numbers [approved]                       | Not applicable<br>(this is only a header file specification) |
| [BSW00324] Do not use HIS I/O Library [approved]                                  | Not applicable<br>(this is only a header file specification) |
| [BSW00325] Runtime of interrupt service routines [approved]                       | Not applicable<br>(this is only a header file specification) |
| [BSW00326] Transition from ISRs to OS tasks [approved]                            | Not applicable<br>(this is only a header file specification) |
| [BSW00327] Error values naming convention [approved]                              | Not applicable<br>(this is only a header file specification) |
| [BSW00328] Avoid duplication of code [approved]                                   | Not applicable<br>(this is only a header file specification) |
| [BSW00329] Avoidance of generic interfaces [approved]                             | Not applicable<br>(this is only a header file specification) |
| [BSW00330] Usage of macros / inline functions instead of functions [approved]     | Not applicable<br>(this is only a header file specification) |
| [BSW00331] Separation of error and status values [approved]                       | Not applicable<br>(this is only a header file specification) |
| [BSW00333] Documentation of callback function context [approved]                  | Not applicable<br>(this is only a header file specification) |
| [BSW00334] Provision of XML file [approved]                                       | Not applicable<br>(this is only a header file specification) |
| [BSW00335] Status values naming convention [approved]                             | Not applicable<br>(this is only a header file specification) |
| [BSW00341] Microcontroller compatibility documentation [approved]                 | Not applicable<br>(this is only a header file specification) |
| [BSW00342] Usage of source code and object  | Not applicable   |

|   |  |
|---|--|
| code [approved]   | (this is only a header file specification)                   |
| [BSW00343] Specification and configuration of time [approved]                         | Not applicable<br>(this is only a header file specification) |
| [BSW00341] Microcontroller compatibility documentation [approved]                     | Not applicable<br>(this is only a header file specification) |
| [BSW00346] Basic set of module files [approved]                                       | Not applicable<br>(this is only a header file specification) |
| [BSW00347] Naming separation of different instances of BSW drivers [approved]         | Not applicable<br>(this is only a header file specification) |
| [BSW00350] Development error detection keyword [approved]                             | Not applicable<br>(this is only a header file specification) |

|--|---|
|  | (this is only a header file specification)  |
| [BSW00338] Detection and Reporting of development errors   | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00369] Do not return development error codes via API   | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00339] Reporting of production relevant error status   | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00348] Standard type header                            | <a href="#">STD001</a> , <a href="#">STD003</a>   |
| [BSW00357] Standard API return type                        | <a href="#">STD005</a> , <a href="#">STD006</a> , <a href="#">STD011</a>                      |
| [BSW00421] Reporting of production relevant error events   | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00422] Debouncing of production relevant error status  | Not applicable<br>(not related to this specification)   |
| [BSW00420] Production relevant error event rate detection  | Not applicable<br>(not related to this specification)   |
| [BSW00417] Reporting of Error Events by Non-Basic Software | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00323] API parameter checking                          | Not applicable<br>(this is only a header file specification)                                  |
| [BSW004] Version check                                     | Check has to be done by a specific tool. Version numbers provided by <a href="#">STD015</a> . |
| [BSW00409] Header files for production code error IDs      | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00385] List possible error notifications               | Not applicable<br>(this is only a header file specification)                                  |
| [BSW00386] Configuration for detecting an error            | Not applicable<br>(this is only a header file specification)                                  |

## 7 Functional specification

### 7.1 General issues

**STD003:**The file name of the standard types header file shall be 'Std\_Types.h'.

**STD004:** It is not allowed to add any project or supplier specific extension to this file. Any extension invalidates the AUTOSAR conformity.

**STD014:** The standard types header file shall be protected against multiple inclusion:

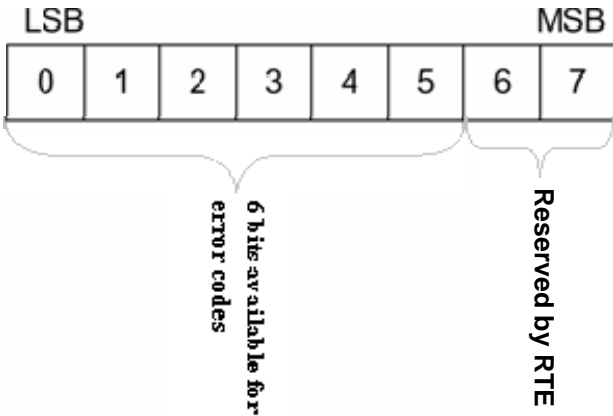

```
#ifndef STD_TYPES_H
#define STD_TYPES_H
..
/*
 * Contents of file
 */
..
#endif /* STD_TYPES_H */
```

## 8 API specification

### 8.1 Type definitions

#### 8.1.1 Std\_ReturnType

|                     |   |                                   |
|---------------------|---|-----------------------------------|
| <b>Type:</b>        | uint8   |                                   |
| <b>Range:</b>       | E_OK  | see 8.2.1, <a href="#">STD006</a> |
|                     | E_NOT_OK  | see 8.2.1, <a href="#">STD006</a> |
|                     | 0x02-0x3F   | Available to user specific errors |
| <b>Description:</b> | <p><b>STD005:</b> This type can be used as standard API return type which is shared between the RTE and the BSW modules. It shall be defined as follows:</p> <pre>typedef uint8 Std_ReturnType;</pre> <p><b>STD011:</b>, The <code>Std_ReturnType</code> shall normally be used with value <code>E_OK</code> or <code>E_NOT_OK</code>. If those return values are not sufficient user specific values can be defined by using the 6 least specific bits.</p> <p>Layout of the <code>Std_ReturnType</code> shall be as stated in the RTE specification. Bit 7 and Bit 8 are reserved and defined by the RTE specification.</p> <div style="text-align: center;">  </div> |                                   |

#### 8.1.2 Std\_VersionInfoType

|              |  |
|--------------|--|
| <b>Type:</b> | <pre>typedef struct {     uint16 vendorID;     uint16 moduleID;     uint8 instanceID;     uint8 sw_major_version;     uint8 sw_minor_version;     uint8 sw_patch_version; } Std_VersionInfoType;</pre> |
|--------------|--|

|                     |   |    |
|---------------------|---|----|
| <b>Range:</b>       | --  | -- |
|                     | --  | -- |
| <b>Description:</b> | <b>STD015</b> : This type shall be used to request the version of a BSW module using the <Module name>_GetVersionInfo() function. |    |

## 8.2 Symbol definitions

### 8.2.1 E\_OK, E\_NOT\_OK

|                      |  |      |
|----------------------|--|------|
| <b>Symbol/Value:</b> | E_OK   | 0x00 |
| <b>Symbol/Value:</b> | E_NOT_OK   | 0x01 |
| <b>Description:</b>  | <b>STD006:</b> Because E_OK is already defined within OSEK, the symbol E_OK has to be shared. To avoid name clashes and redefinition problems, the symbols have to be defined in the following way (approved within implementation): <pre>                 #ifndef STATUSTYPEDEFINED                 #define STATUSTYPEDEFINED                 #define E_OK    0x00                  typedef unsigned char StatusType; /* OSEK compliance */                 #endif                  #define E_NOT_OK  0x01                 </pre> |      |

### 8.2.2 STD\_HIGH, STD\_LOW

|                      |   |      |
|----------------------|---|------|
| <b>Symbol/Value:</b> | STD_HIGH  | 0x01 |
| <b>Symbol/Value:</b> | STD_LOW   | 0x00 |
| <b>Description:</b>  | <b>STD007:</b> The symbols STD_HIGH and STD_LOW shall be defined as follows: <pre>                 #define STD_HIGH  0x01    /* Physical state 5V or 3.3V */                 #define STD_LOW  0x00    /* Physical state 0V          */                 </pre> |      |

### 8.2.3 STD\_ACTIVE, STD\_IDLE

|                      |  |      |
|----------------------|--|------|
| <b>Symbol/Value:</b> | STD_ACTIVE   | 0x01 |
| <b>Symbol/Value:</b> | STD_IDLE   | 0x00 |
| <b>Description:</b>  | <b>STD013:</b> The symbols STD_ACTIVE and STD_IDLE shall be defined as follows: <pre>                 #define STD_ACTIVE  0x01    /* Logical state active */                 #define STD_IDLE  0x00    /* Logical state idle   */                 </pre> |      |

### 8.2.4 STD\_ON, STD\_OFF

|                      |   |      |
|----------------------|---|------|
| <b>Symbol/Value:</b> | STD_ON  | 0x01 |
| <b>Symbol/Value:</b> | STD_OFF   | 0x00 |
| <b>Description:</b>  | <b>STD010:</b> The symbols <code>STD_ON</code> and <code>STD_OFF</code> shall be defined as follows:<br><code>#define STD_ON 0x01</code><br><code>#define STD_OFF 0x00</code> |      |

### 8.3 Function definitions

Not applicable.

## 9 Sequence diagrams

Not applicable.

## 10 Configuration specification

### 10.1 Published parameters

**STD002:** The following table specifies parameters that shall be published within the platform types header file and also in the module's description file.

The standard common published information like

vendorId (STD\_TYPES\_VENDOR\_ID),  
moduleId (STD\_TYPES\_MODULE\_ID),  
arMajorVersion (STD\_TYPES\_AR\_MAJOR\_VERSION),  
arMinorVersion (STD\_TYPES\_AR\_MINOR\_VERSION),  
arPatchVersion (STD\_TYPES\_AR\_PATCH\_VERSION),  
swMajorVersion (STD\_TYPES\_SW\_MAJOR\_VERSION),  
swMinorVersion (STD\_TYPES\_SW\_MINOR\_VERSION),  
swPatchVersion (STD\_TYPES\_SW\_PATCH\_VERSION),  
vendorApiInfix (STD\_TYPES\_VENDOR\_API\_INFIX)

is provided in the BSW Module Description Template (see [4] Figure 4.1 and Figure 7.1).

Additional published parameters are listed below if applicable for this module.
