Disclaimer

This specification and the material contained in it, as released by AUTOSAR is for the purpose of information only. AUTOSAR and the companies that have contributed to it shall not be liable for any use of the specification.

The material contained in this specification is protected by copyright and other types of Intellectual Property Rights. The commercial exploitation of the material contained in this specification requires a license to such Intellectual Property Rights.

This specification may be utilized or reproduced without any modification, in any form or by any means, for informational purposes only.

For any other purpose, no part of the specification may be utilized or reproduced, in any form or by any means, without permission in writing from the publisher.

The AUTOSAR specifications have been developed for automotive applications only. They have neither been developed, nor tested for non-automotive applications.

The word AUTOSAR and the AUTOSAR logo are registered trademarks.

Advice for users

AUTOSAR Specification Documents may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the Specification Documents for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such Specification Documents, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

1 Introduction and functional overview

This document specifies the AUTOSAR platform types header file. It contains all platform dependent types and symbols. Those types must be abstracted in order to become platform and compiler independent.

It is required that all platform types files are unique within the AUTOSAR community to guarantee unique types per platform and to avoid type changes when moving a software module from platform A to B.

2 Acronyms and abbreviations

Acronyms and abbreviations that have a local scope are not contained in the AUTOSAR glossary. These must appear in a local glossary.

Acronym:	Description:
Rollover	The following example sequence is called 'rollover':
mechanism	 An unsigned char has the value of 255
	It is incremented by 1
	The result is 0
SDU	Service Data Unit (payload)

Abbreviation:	Description:
int	Integer

4 Constraints and assumptions

4.1 Limitations

No limitations.

4.2 Applicability to car domains

No restrictions.

4.3 Applicability to safety related environments

The AUTOSAR boolean type may be used if the correct usage (see <u>PLATFORM027</u>) is proven by a formal code review or a static analysis by a validated static analysis tool.

The optimized AUTOSAR integer data types (*_least) may be used if the correct usage (see <u>PLATFORM005</u>) is proven by a formal code review or a static analysis by a validated static analysis tool.

5 Dependencies to other modules

None.

5.1 File structure

5.1.1 Code file structure

None

5.1.2 Header file structure

Two header file structures are applicable. One is depending on communication related basic software modules and the second is depending on non-communication related basic software modules.

5.1.2.1 Communication related basic software modules

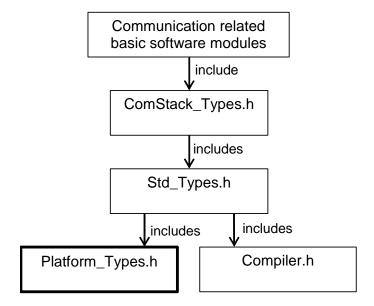

Figure 1: Include File Structure for communication related basic software modules

- <user>_Types.h shall include ComStack_Types.h and <user> is a communication related basic software module (e.g. Com, PduR, Can...)
- ComStack Types.h shall include Std Types.h
- Std Types.h shall include Platform Types.h
- Std Types.h shall include Compiler.h

5.1.3 Non-communication related basic software modules

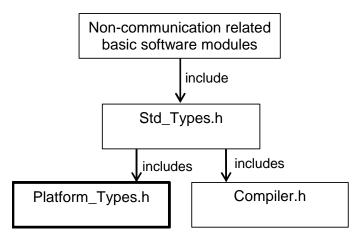

Figure 2: Include File Structure for non-communication related basic software modules

- <user>_Types.h shall include ComStack_Types.h and user is a noncommunication related basic software module(e.g. Mcu, WdgM ...)
- Std Types.h shall include Platform Types.h
- Std Types.h shall include Compiler.h

6.1 Linkage items for requirements management

This chapter contents several items which are only used in the requirement management tool. The items are necessary to build up the linkage between requirements, specification, etc. (e.g. for impact and coverage analyses).

Not applicable

For release versions, this chapter has to be removed.

7 Functional specification

7.1 General issues

PLATFORM001: For each platform an own platform types header file has to be provided.

PLATFORM031: If a specific compiler (not listed in this specification) requires a different mapping of ANSI C types to the AUTOSAR standard integer types, an own platform types header file for this compiler has to be provided.

PLATFORM003: The file name of the platform types header file shall be for all platforms 'Platform Types.h'.

PLATFORM002: It is not allowed to add any extension to this file. Any extension invalidates the AUTOSAR conformity.

7.2 CPU Type

PLATFORM044: For each platform the register width of the CPU used shall be indicated by defining CPU TYPE.

PLATFORM045: According to the register width of the CPU used, CPU_TYPE shall be assigned to one of the symbols CPU TYPE 8, CPU TYPE 16 or CPU TYPE 32.

7.3 Endianess

The pattern for bit, byte and word ordering in native types, such as integers, is called endianess.

PLATFORM043: For each platform the appropriate bit order on register level shall be indicated in the platform types header file using the symbol CPU BIT ORDER.

PLATFORM046: For each platform the appropriate byte order on memory level shall be indicated in the platform types header file using the symbol CPU BYTE ORDER.

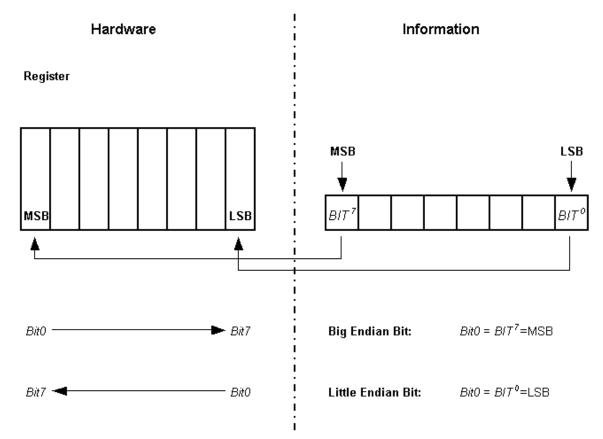

7.3.1 Bit Ordering (Register)

PLATFORM048: In case of big endian bit ordering CPU_BIT_ORDER shall be assigned to MSB FIRST in the platform types header file.

PLATFORM049: In case of little endian bit ordering CPU_BIT_ORDER shall be assigned to LSB FIRST in the platform types header file.

Illustrations:

Important Note:

The naming convention Bit0, Bit1, etc. and the bit's significance within a byte, word, etc. are different topics and shall not be mixed. The counting scheme of bits in Motorola μ C-architecture's (Big Endian Bit Order) starts with Bit0 indicating the Most Significant Bit, whereas all other μ C using Little Endian Bit Order assign Bit0 to be the Least Significant Bit!

The MSB in an accumulator is always stored as the left-most bit regardless of the CPU type. Hence, big and little endianess bit orders imply different bit-naming conventions.

7.3.2 Byte Ordering (Memory)

PLATFORM050: In case of big endian byte ordering CPU_BYTE_ORDER shall be assigned to HIGH BYTE FIRST in the platform types header file.

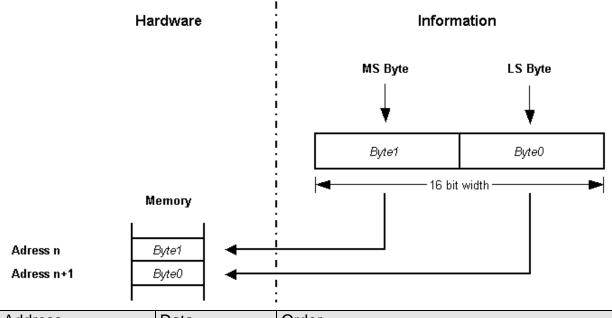

PLATFORM051: In case of little endian byte ordering CPU_BYTE_ORDER shall be assigned to LOW_BYTE_FIRST in the platform types header file.

Naming convention for illustration:

The Most Significant Byte within a 16 bit wide data is named Byte1. The Least Significant Byte within a 16 bit wide data is named Byte0.

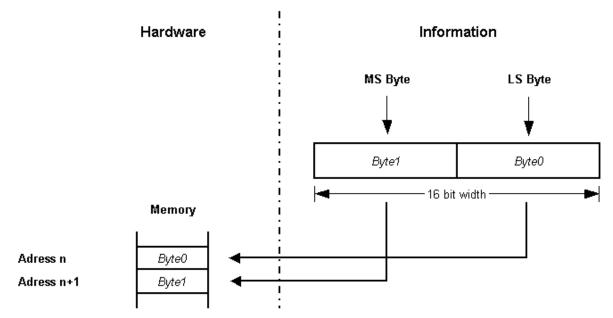

Big Endian (HIGH BYTE FIRST)

Address	Data	Order
n	Byte1	Most Significant Byte (HIGH_BYTE_FIRST)
n+1	Byte0	Least Significant Byte

Little Endian (LOW_BYTE_FIRST)

Address	Data	Order
n	Byte0	Least Significant Byte (LOW_BYTE_FIRST)
n+1	Byte1	Most Significant Byte

Important Note:

The naming convention Byte0 and Byte1 is not unique and may be different in the manufacturer's reference documentation for a particular μ C.

7.4 Optimized integer data types

PLATFORM005: The optimized AUTOSAR integer data types (*_least) shall have at least the size given by the type name, but the types shall be implemented in a way that the best performance on the specific platform is achieved. 'Best performance' is defined in this context as 'least processor cycles for variable access as possible'. Example: on a TC1796, uint8_least is mapped to unsigned int (32 bit) because access to this type requires less processor cycles than e.g. unsigned char (8 bit).

PLATFORM032: The optimized AUTOSAR integer data types (*_least) shall only be used with a local scope inside a module. They are not allowed to be used within the API of a module.

PLATFORM033: Operations on the optimized AUTOSAR integer data types (*_least) shall not expect a specific size of this type. The size specified by the name is guaranteed, but can be larger. It is not allowed to use rollover mechanisms during counting and shifting.

Examples of usage:

- Loop counters (e.g. maximum loop count = 124 → use uint8 least)
- Switch case arguments (e.g. maximum number of states = 17 → use uint8 least)

7.5 boolean data type

PLATFORM027: The standard AUTOSAR type boolean shall be implemented on basis of an eight bits long unsigned integer.

PLATFORM034: The standard AUTOSAR type boolean shall only be used in conjunction with the standard symbols TRUE and FALSE. For value assignments of variables of type boolean no arithmetic or logical operators $(+, ++, -, --, *, /, \setminus, <<, >>, !, ~)$ must be used. The only allowed form of assignment is

```
boolean var;
...
var = TRUE;
var = FALSE;
```

The only allowed forms of comparison are

```
boolean var;
...
if (var == TRUE)
if (var == FALSE)
if (var != TRUE)
if (var != FALSE)
```

8 API specification

8.1 Imported types

Not applicable.

8.2 Type definitions

Type definitions.PLATFORM061: Concerning the signed integer types, AUTOSAR supports for compiler and target implementation only 2 complement arithmetic. This directly impacts the chosen ranges for these types.

8.2.1 boolean

Name:	boolean		
Туре:	Unsigned Intege	r	
Range:	FALSE	-	
	TRUE	-	
Description:	the definitions TRUE usage. PLATFORM060: The type where pointers	s standard AUTOSAR type shall only be and FALSE. See PLATFORM027 for it boolean type shall always be mapped can be applied to to enable a passing of types of some HW platforms which a point to.	mplementation and I to a platform specific of parameters via API.

8.2.2 uint8

Name:	uint8		
Type:	Unsigned Intege	r	
Range:	8 bit		0255 0x000xFF
Description:	PLATFORM013: Thi	PLATFORM013: This standard AUTOSAR type shall be of 8 bit unsigned.	

8.2.3 uint16

Name:	uint16		
Туре:	Unsigned Intege	r	
Range:	16 bit		065535 0x00000xFFFF
Description:	PLATFORM014: Thi	PLATFORM014: This standard AUTOSAR type shall be of 16 bit unsigned.	

8.2.4 uint32

Name:	uint32
Type:	Unsigned Integer
1 9 60.	

Range:	32 bit		04294967295 0x000000000xFFFFFFF
Description:	PLATFORM015: Th	nis star	ndard AUTOSAR type shall be of 32 bit unsigned.

8.2.5 sint8

Name:	sint8	
Туре:	Signed Integer	
Range:	7 bit + 1 bit128+127 sign 0x800x7F	
Description:	PLATFORM016: This standard AUTOSAR type shall be 8 bit signed.	

8.2.6 sint16

Name:	sint16	
Туре:	Signed Integer	
Range:	15 bit + 1 bit32768+32767	
	sign	
Description:	PLATFORM017: This standard AUTOSAR type shall be 16 bit signed.	

8.2.7 sint32

Name:	sint32	
Type:	Signed Integer	
90.	31 bit + 1 bit2147483648 +2147483647 sign	
Description:	PLATFORM018: This standard AUTOSAR type shall be 32 bit signed.	

8.2.8 uint8_least

Name:	uint8_least
Type:	Unsigned Integer
Range:	At least 8 bit At least 0255
Description:	PLATFORM020: This optimized AUTOSAR type shall be at least of 8 bit unsigned.
	See PLATFORM005 for implementation and usage.

8.2.9 uint16_least

Name:	uint16_least	
Туре:	Unsigned Integer	
Range:	At least 16 bit At least 065535	
	PLATFORM021: This standard AUTOSAR type shall be at least 16 bit unsigned. See PLATFORM005 for implementation and usage.	

8.2.10 uint32_least

Name:	uint32_least
Type:	Unsigned Integer
Range:	At least 32 bit At least 04294967295
	PLATFORM022: This standard AUTOSAR type shall be at least 32 bit unsigned. See PLATFORM005 for implementation and usage.

8.2.11 sint8_least

Name:	sint8_least		
Type:	Signed Integer		
	At least 7 bit At least -128+127 + 1 bit sign		
	PLATFORM023: This standard AUTOSAR type shall be at least of 8 bit signed. See PLATFORM005 for implementation and usage.		

8.2.12 sint16_least

Name:	sint16_least			
Type:	Signed Integer			
	At least 15 bit + 1 bit sign	At least -32768+32767		
		L LAUTOCAR (L III) (L (AOLY)		
	PLATFORM024: This standard AUTOSAR type shall be at least of 16 bit signed.			
	See PLATFORM005 for imp	See PLATFORM005 for implementation and usage.		

8.2.13 sint32_least

Name:	sint32_least		
Type:	Signed Integer		
•	At least 31 bit At least -2147483648 +2147483647 + 1 bit sign		
	PLATFORM025: This standard AUTOSAR type shall be at least of 32 bit signed. See PLATFORM005 for implementation and usage.		

8.2.14 float32

Name:	float32		
Туре:	Float		
Range:	32 bit	-	
	PLATFORM041: This standard AUTOSAR type shall be mapped as a single precision (32-bit) floating-point number.		

8.2.15 float64

Name:	float64		
Type:	Double		
Range:	64 bit		
_	PLATFORM042: This standard AUTOSAR type shall be mapped as a double precision (64-bit) floating-point number.		

8.3 Symbol definitions

8.3.1 CPU_TYPE

Name:	CPU_TYPE		
Type:	Enumeration		
Range:	CPU_TYPE_8	Indicating a 8 bit processor	
	CPU_TYPE_16	Indicating a 16 bit processor	
	CPU_TYPE_32	Indicating a 32 bit processor	
Description:	This symbol shall be defined as #define having one of the values CPU_TYPE_8,		
	CPU_TYPE_16 or CPU_TYPE_32 according to the platform.		

8.3.2 CPU_BIT_ORDER

Name:	CPU_BIT_ORDER		
Type:	Enumeration		
Range:	MSB_FIRST	The most significant bit is the first bit of the bit field	
	LSB_FIRST	The least significant bit is the first bit of the bit field	
Description:		PLATFORM038: This symbol shall be defined as #define having one of the values	
	MSB_FIRST or LSB	MSB_FIRST or LSB_FIRST according to the platform.	

8.3.3 CPU_BYTE_ORDER

Name:	CPU_BYTE_ORDER	
Type:	Enumeration	
Range:	HIGH_BYTE_FIRST Within a uint16, the high byte is located before the low byte.	
	LOW_BYTE_FIRST Within uint16, the low byte is located before the high byte.	
	PLATFORM039: This symbol shall be defined as #define having one of the values	
	HIGH_BYTE_FIRST or LOW_BYTE_FIRST according to the platform.	

8.3.4 TRUE, FALSE

Name:	TRUE_FALSE		
Туре:	Enumeration		
Range:	TRUE		
	FALSE		
Description:	shall be avoided usin PLATFORM056: The #ifndef TRUE #define TRUE 1 #endif #ifndef FALSE #define FALSE 0 #endif PLATFORM055: The	case of in-built compiler support of the symbols, redefinition as a conditional check. e symbols TRUE and FALSE shall be defined as follows: esse symbols shall only be used in conjunction with the din Platform_Types.h.	ns

8.4 Function definitions

Not applicable.

8.5 Call-back notifications

Not applicable.

8.6 Scheduled functions

Not applicable.

8.7 Expected Interfaces

Not applicable.

9 Sequence diagrams

Not applicable.

10 Configuration specification

10.1 Published parameters

Published information contains data defined by the implementer of the SW module that does not change when the module is adapted (i.e. configured) to the actual HW/SW environment. It thus contains version and manufacturer information.

The standard common published information like

```
vendorld (PLATFORM_VENDOR_ID), moduleld (PLATFORM_MODULE_ID), arMajorVersion (PLATFORM_AR_MAJOR_VERSION), arMinorVersion (PLATFORM_AR_MINOR_VERSION), arPatchVersion (PLATFORM_AR_PATCH_VERSION), swMajorVersion (PLATFORM_SW_MAJOR_VERSION), swMinorVersion (PLATFORM_SW_MINOR_VERSION), swPatchVersion (PLATFORM_SW_PATCH_VERSION), vendorApiInfix (PLATFORM_VENDOR_API_INFIX)
```

is provided in the BSW Module Description Template (see [2] Figure 4.1 and Figure 7.1).

Additional published parameters are listed below if applicable for this module.

11 Annex

11.1 Type definitions – general

PLATFORM057: The platform type files for all platforms shall contain the following symbols:

```
#define CPU TYPE 8
                         8
#define CPU TYPE 16
                         16
#define CPU TYPE 32
                         32
#define MSB FIRST
#define LSB FIRST
#define HIGH BYTE FIRST
                         0
#define LOW BYTE FIRST
                         1
```

11.2 Type definitions - S12X

PLATFORM006: The platform types for Freescale S12X shall have the following mapping to the ANSI C types:

```
Types:
typedef unsigned char boolean;
typedef unsigned char typedef signed short typedef unsigned.
                                              sint8;
                                             uint8;
typedef signed long
                                              sint32;
typedef unsigned long
                                               uint32;
typedef signed char
typedef unsigned char
typedef signed short
typedef unsigned short
typedef unsigned short
typedef signed long
typedef unsigned long
sint8_least;
uint8_least;
sint8_least;
uint16_least;
typedef unsigned long
uint32_least;
typedef float
                                             float32;
typedef double
                                                float64;
```

11.3 Type definitions - ST10

PLATFORM007: The platform types for ST Microelectronics ST10 shall have the following mapping to the ANSI C types:

Symbols:

```
#define CPU TYPE
                           CPU TYPE 16
#define CPU BIT ORDER
                           LSB FIRST
#define CPU BYTE ORDER
                          LOW BYTE FIRST
Types:
typedef unsigned char
                          boolean;
typedef signed char
                          sint8;
typedef unsigned char
                          uint8;
typedef signed short
                          sint16;
typedef unsigned short
                          uint16;
typedef signed long
                          sint32;
typedef unsigned long
                          uint32;
typedef unsigned short
                          uint8 least;
typedef unsigned short
                           uint16 least;
typedef unsigned long
                          uint32 least;
typedef signed short
                          sint8 least;
typedef signed short
                          sint16 least;
typedef signed long
                          sint32 least;
typedef float
                           float32;
typedef double
                          float64;
```

11.4 Type definitions - ST30

PLATFORM008: The platform types for STMicroelectronics ST30 shall have the following mapping to the ANSI C types:

#define	CPU_TYPE CPU_BIT_ORDER CPU_BYTE_ORDER	CPU_TYPE_32 LSB_FIRST LOW_BYTE_FIRST	1
Types: typedef	unsigned char	boolean;	
typedef typedef typedef typedef typedef	signed char unsigned char signed short unsigned short signed long unsigned long	<pre>sint8; uint8; sint16; uint16; sint32; uint32;</pre>	
31 of 35		1	Do

```
typedef unsigned long
typedef unsigned long
typedef unsigned long
typedef unsigned long
typedef signed long
typedef float
typedef float
typedef float
float32;
typedef double
float64;
```

11.5 Type definitions – V850

PLATFORM009: The platform types for NEC V850 shall have the following mapping to the ANSI C types:

Symbols:

```
#define CPU_TYPE
#define CPU_BIT_ORDER
#define CPU_BYTE_ORDER

#define CPU_BYTE_ORDER

Types:

typedef unsigned char
typedef signed char
typedef signed short
typedef unsigned short
typedef unsigned long
typedef signed long
typedef float
typedef float
float32;
typedef float
float64;
```

11.6 Type definitions - MPC5554

PLATFORM010: The platform types for Freescale MPC5554 shall have the following mapping to the ANSI C types:

Symbols:

#define CPU_TYPE CPU_TYPE_32
#define CPU_BIT_ORDER MSB_FIRST

```
#define CPU BYTE ORDER HIGH BYTE FIRST
Types:
typedef unsigned char
                                        boolean;
typedef signed char
                                       sint8;
typedef unsigned char
                                      uint8;
typedef signed short
                                      sint16;
typedef unsigned short
                                      uint16;
typedef signed long
                                       sint32;
typedef unsigned long
                                       uint32;
typedef unsigned long
typedef unsigned long
typedef unsigned long
typedef unsigned long
typedef signed long
typedef signed long
typedef signed long
sint8_least;
typedef signed long
sint16_least;
sint32_least;
typedef float
                                       float32;
typedef double
                                       float64;
```

11.7 Type definitions – TC1796/TC1766

PLATFORM011: The platform types for Infineon TC1796/TC1766 shall have the following mapping to the ANSI C types:

```
#define CPU TYPE
                                 CPU TYPE 32
#define CPU BIT ORDER
                               LSB FIRST
#define CPU BYTE ORDER
                                LOW BYTE FIRST
Types:
typedef unsigned char
                                boolean;
typedef signed char
                                sint8;
typedef unsigned char
                                uint8;
typedef signed short
                                sint16;
                               uint16;
typedef unsigned short
typedef signed long
                                sint32;
typedef unsigned long
                                uint32;
typedef unsigned long
                                uint8 least;
                                uint16 least;
typedef unsigned long uint32_least;
typedef signed long sint8_least;
typedef signed long sint16_least;
typedef signed long sint32_least;
typedef float
                                 float32;
```

typedef double float64;

11.8 Type definitions – MB91F

PLATFORM019: The platform types for Fujitsu MB91F shall have the following mapping to the ANSI C types:

Symbols:

```
#define CPU_TYPE CPU_TYPE_3
#define CPU_BIT_ORDER LSB_FIRST
                                              CPU TYPE 32
#define CPU BYTE ORDER
                                            HIGH BYTE FIRST
Types:
typedef unsigned char boolean;
                                            sint8;
typedef signed char
typedef unsigned char uint8; typedef signed short sint16; typedef unsigned short uint16;
typedef signed long
                                            sint32;
typedef unsigned long
                                             uint32;
typedef unsigned long
typedef unsigned long
typedef unsigned long
typedef unsigned long
typedef signed long
typedef signed long
typedef signed long
typedef signed long
sint16_least;
typedef signed long
sint32_least;
typedef float
                                             float32;
typedef double
                                             float64;
```

11.9 Type definitions - M16C/M32C

PLATFORM058: The platform types for Renesas M16C and M32C shall have the following mapping to the ANSI C types:

```
typedef unsigned short
                             uint16;
typedef signed long
                                sint32;
typedef unsigned long
                                uint32;
                           uint8_least;
uint16_least;
uint32_least;
sint8_least;
sint16_least;
typedef unsigned short
typedef unsigned short
                                uint16 least;
typedef unsigned long
                                uint32 least;
typedef signed short
typedef signed short typedef signed long
                                sint16 least;
                                sint32 least;
typedef float
                                float32;
typedef double
                                float64;
```

11.10Type definitions – SHx

PLATFORM059: The platform types for Renesas SHx shall have the following mapping to the ANSI C types:

```
#define CPU TYPE
                                                                                                                                                             CPU TYPE 32
    #define CPU BIT ORDER
                                                                                                                                                       LSB FIRST
   #define CPU BYTE ORDER HIGH BYTE FIRST
   Types:
   typedef unsigned char
                                                                                                                                                           boolean;
   typedef signed char
                                                                                                                                                            sint8;
   typedef unsigned char
                                                                                                                                                       uint8;
   typedef signed short
                                                                                                                                                           sint16;
  typedef unsigned short
                                                                                                                                                    uint16;
   typedef signed int
                                                                                                                                                           sint32;
typedef unsigned long
typedef signed long
typedef unsigned long
typedef
   typedef unsigned int
                                                                                                                                                           uint32;
  typedef signed long
   typedef float
                                                                                                                                                          float32;
   typedef double
                                                                                                                                                           float64;
```
