## **Disclaimer**

This specification and the material contained in it, as released by AUTOSAR, is for the purpose of information only. AUTOSAR and the companies that have contributed to it shall not be liable for any use of the specification.

The material contained in this specification is protected by copyright and other types of Intellectual Property Rights. The commercial exploitation of the material contained in this specification requires a license to such Intellectual Property Rights.

This specification may be utilized or reproduced without any modification, in any form or by any means, for informational purposes only. For any other purpose, no part of the specification may be utilized or reproduced, in any form or by any means, without permission in writing from the publisher.

The AUTOSAR specifications have been developed for automotive applications only. They have neither been developed, nor tested for non-automotive applications.

The word AUTOSAR and the AUTOSAR logo are registered trademarks.

## **Advice for users**

AUTOSAR specifications may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the specifications for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such specifications, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

AUTOSAR\_ATR\_Requirements.pdf

### 3 Scope

The following test cases are used to verify the correct behavior of all the communication features which are dependent on the CAN bus.

Each test case documents for which releases of the AUTOSAR software specification it can be used:

- When test cases are known to be applicable for a release, this is mentioned in the “AUTOSAR Releases” field of the test case specifications. You can find a summary of the applicability of all test cases to the software specification releases in the “AUTOSAR\_TR\_ATSReleaseApplicability” document.
- When test cases are known to require adaptations (in their configuration requirements or test sequences), this is mentioned in the “Needed Adaptation to other Releases” field of the test case specifications.

## 4 RS\_BRF\_01592 - Data Transfer

### 4.1 General Test Objective and Approach

This Test Specification intends to cover the Data Transfer feature of the Com as described in the AUTOSAR Feature [RS\_BRF\_01592].

The tests use a test bench environment and Embedded Software Components that use the feature.

This test case document has been established to cover the following features:

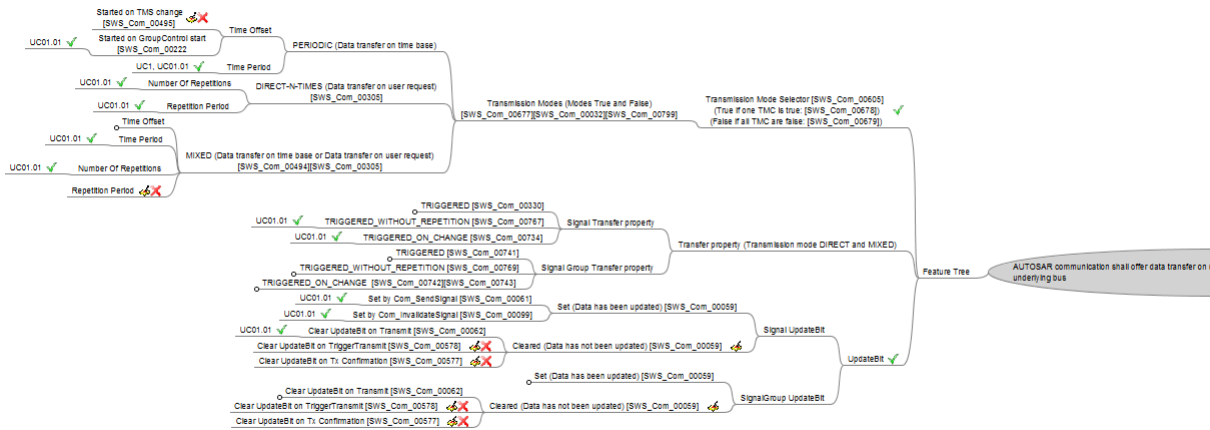

Fig A: Requirement on Data Transfer.

This specification gives the description of required tests environments (test bench, uses case, arxml files) and detailed tests cases for executing tests.

## 4.1.1 Test System

### 4.1.1.1 Overview on Architecture

In order to cover the required features / sub-features, the different uses cases are created.

#### 4.1.1.1.1 Use case 01.01: CAN Bus

For this use case, the aim is to test the data transfer on CAN bus, In this architecture, COM focus will be on signals with 1Byte, 2 Bytes and 4 Bytes:

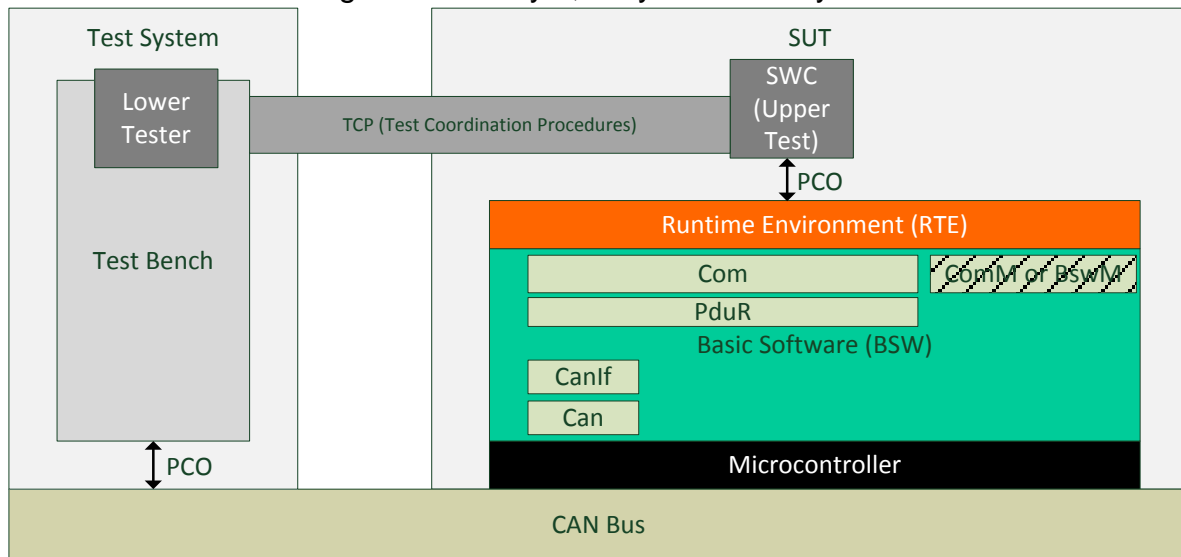

Fig B: Test System Architecture.

The test system architecture consists of Test Bench that executes only test sequencer and gives actions request through Test coordination Procedures to embedded SWC.

#### 4.1.1.2 Specific Requirements

Not Applicable.

#### 4.1.1.3 Test Coordination Requirements

Not Applicable.

## 4.1.2 Test Configuration

This section describes sets of requirements on configuration.

These sets are later referenced by test cases.

No configuration files are provided. They need to be developed when the test suite is implemented.

**4.1.2.1 Required ECU Extract of System Description Files**

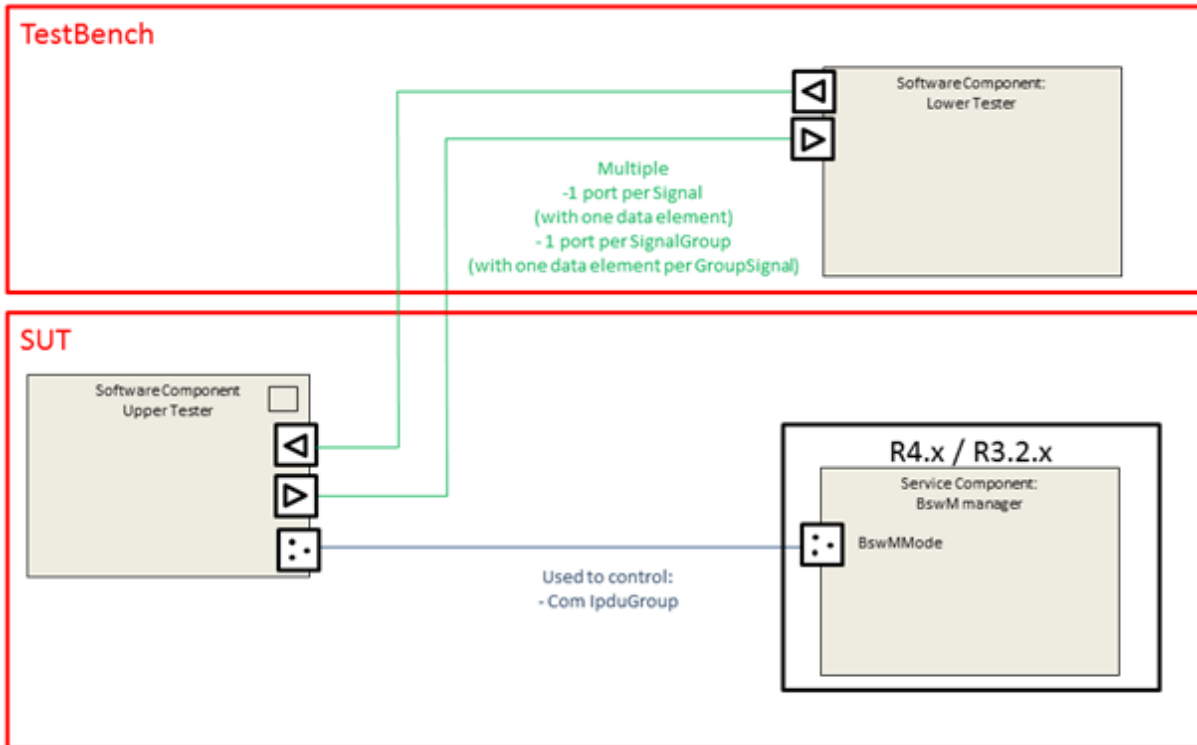

Fig C: SWC Overview.

A Mode-Switch Interface IF\_AT\_SwC\_ActionsBswM must be created. The SWC Upper Tester should trigger BSW action's and BswM read the state through BswMMode Port. BswM shall launch actions according to following table (check 4.3 Test Cases for details):

ModeDeclaration	BswM Actions
IPDU_ACTIVATED	OnEntry: -Start IpduGroup

For the Software Component point of view, for each test case, the communication interfaces are defined as follow:

Port name	Data element type	Dataelement	Mapping	Type
<TestCaseName>_<SignalName>	uint8	<SignalName>	<SignalName>	Signal
<TestCaseName>_<SignalGroupName>	Struct { uint8: GroupSignal1; ... uint8: GroupSignalx; }	GroupSignal	GroupSignal1-> <Signal1Name> GroupSignal2-> <Signal2Name> <PortName>-> <SignalGroupName>	Signal Group

Table 1:

Therefore ports and signals names change according to Test Case Name, but the building rule is the same.

#### 4.1.2.1.1 Use Case 01.01: CAN Bus

The communication database is depicted below:

ComIPduGroup	I-Pdu	SignalGroup	Signal	Tx ECU	Rx ECU
AT_208_IpduGroup	AT_208_Ipdu		AT_208_Sg1	SUT	TestBench
AT_209_IpduGroup	AT_209_Ipdu	AT_209_SgGr1	AT_209_GrSg1 AT_209_GrSg2	SUT	TestBench
AT_210_IpduGroup	AT_210_Ipdu		AT_210_Sg1 AT_210_Sg2	SUT	TestBench
AT_211_IpduGroup	AT_211_Ipdu	AT_211_SgGr1 AT_211_SgGr2	AT_211_GrSg1 AT_211_GrSg2 AT_211_GrSg3 AT_211_GrSg4 AT_211_GrSg5	SUT	TestBench
AT_213_IpduGroup	AT_213_Ipdu		AT_213_Sg1	SUT	TestBench
AT_214_IpduGroup	AT_214_Ipdu	AT_214_SgGr1	AT_214_GrSg1 AT_214_GrSg2	SUT	TestBench

Table 2:

#### 4.1.2.2 Required ECU Configuration Description Files

The section describes the common EcuC parameters between test cases that are required by the implementer of the test cases.

No specific configuration requirements for ECU Configuration files as they can be derived from EcuExtract.

#### 4.1.2.3 Required Software Component Description Files

The section describes the SWC-D that are required by the implementer of the test cases.

Refer to Fig C.

#### 4.1.2.4 Mandatory vs. Customizable Parts

Mandatory parameters are listed in Tests Cases (see 4.3 Test Cases).

Customizable parameters are (these values are test case independent):

- ComSignalType (ISignal.networkRepresentationProps.swBaseType), ComSignalLength (baseTypeSize) and ComBitSize (ISignal.length) => must be consistent to associated dataElement
- ComSignalInitValue (ISignal.initValue)
- PduLength (Pdu.length)
- ComBitPosition (ISignalToIPduMapping.startPosition) and ComUpdateBitPosition (ISignalToIPduMapping.updateIndicationBitPosition) values => the location of these elements in the pdu
- CAN frames identifiers

NOTE: ComSignalInitValue and ComSignalDataInvalidValue are specific to test implementer and signal type.

### 4.1.3 Test Case Design

Not Applicable.

### 4.2 Re-usable Test Steps

Not Applicable.

### 4.3 Test Cases

#### 4.3.1 [ATS\_COMCAN\_00208] Signal on Time Base frame (PERIODIC)

<b>Test Objective</b>	Signal on Time Base frame (PERIODIC)

<b>Requirements / Reference to Test Environment</b>			
<b>Configuration Parameters</b>	Example configuration: CanHandleType = BASIC CanIdValue = 0x2BC CanObjectType = RECEIVE CanIfRxPduDlc = 0x03 CanIfRxPduReadNotifyStatus = TRUE CanIfPublicReadRxPduDataApi = TRUE CanIfHrhSoftwareFilter = TRUE CanIfHrhRangeRxPduLowerCanId = 0x2BD CanIfHrhRangeRxPduUpperCanId = 0x2C6 CanIfRxPduUserRxIndicationUL = CAN_TP CanIfRxPduUserRxIndicationName = CanTp_RxIndication CanIfPrivateDlcCheck = TRUE ComFirstTimeout = 400 ms ComTimeout = 100 ms Com_CbkRxTOut = App_Rte_Com_CbkTOut_TC_003 ComNotification = Rte_COMCbk_RteRx_Byte_0.		
<b>Summary</b>	To verify the software filtering functionality for pass and fail of the received L-PDU when receive indication is given to CanIf. Then DLC and The target configured upper layer which is to be called providing receive indication service for the received L-PDU.		

	<p><b>Test Description:</b></p> <p>Using configuration parameters, the software filtering and DLC check shall be enabled.</p> <p>After this CanIds will be sent from the TESTER to check the software filter algorithm and DLC check shall be processed afterwards.</p> <p>As this is an indirect testing i.e. the Com notification will be given to the test manager software component about the reception.</p> <p>Also, for the software filter algorithm to fail it is only after the ComFirstTimeout the deadline monitoring will be starting and after ComTimeout the notification that the data has not been received will be given to test manager software component.</p>		
<b>Needed Adaptation to other Releases</b>	NA		
<b>Pre-conditions</b>	DUT shall be initialized. ComM module shall be in FULL communication		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[LT]	[SWC]	
	Transmit a frame within the range of DLC having Can-Id and Data (same number of bytes as mentioned in DLC) to the DUT from TESTER.	Com notification for the configured signal shall be invoked in Test SWC.	
<b>Step 2</b>	[SWC]	[SWC]	
	Request Rte_Read for the signal	Data shall be updated with the same content seen on the bus	
<b>Step 3</b>	[LT]	[SWC]	
	Transmit a frame outside the range of DLC having Can-Id with Data (less than the number specified in DLC) to the DUT from TESTER	Com notification for the configured signal shall not be invoked in Test SWC.	
<b>Post-conditions</b>			

#### 4.3.9 [ATS\_COMCAN\_00717] DLC Check not configured for the received L-PDU

<b>Test Objective</b>	DLC Check not configured for the received L-PDU		
<b>ID</b>	ATS_COMCAN_00717	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CAN and CANIF	<b>State</b>	reviewed
<b>Trace to</b>			

<b>Requirement on Acceptance Test Document</b>		
<b>Trace to SWS Item</b>	CANInterface: SWS_CANIF_00830	
<b>Requirements / Reference to Test Environment</b>		
<b>Configuration Parameters</b>	<p>Example configuration:</p> <p>CanHandleType = BASIC          CanIdType = STANDARD          CanIdValue = 0x100          CanObjectType = RECEIVE          CanFilterMask = CAN_FILTER_MASK_F          CanIfHrhSoftwareFilter = TRUE          CanIfHrhRangeRxPduLowerCanId = 0x100          CanIfHrhRangeRxPduRangeCanIdType = STANDARD          CanIfHrhRangeRxPduUpperCanId = 0x10A          CanIfRxPduReadNotifyStatus = TRUE          CanIfRxPduUserRxIndicationUL = PDUR          CanIfPrivateDlcCheck = FALSE          ComIPduCallout = App_CanIf_TC_003</p>	
<b>Summary</b>	<p>To check how CanIf behaves for a received L-PDU when DLC check is not configured for the received L-PDU.</p> <p><b>Test Description:</b></p> <p>Using Configuration Parameters, the software filtering shall be enabled and a received L-PDU with any DLC length is accepted when DLC check is not configured.</p>	
<b>Needed Adaptation to other Releases</b>	NA	
<b>Pre-conditions</b>	DUT shall be initialized. ComM module shall be in FULL communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>	<b>Pass Criteria</b>	
<b>Step 1</b>	<p>[LT]</p> <p>Transmit frame with DLC value which is greater than the configured DLC value</p>	<p>[SWC]</p> <p>Com notification for the configured signal shall be invoked in Test SWC.</p>
<b>Step 2</b>	<p>[SWC]</p> <p>Request Rte_Read for the signal</p>	<p>[SWC]</p> <p>Signal value shall be the same as sent on the bus</p>
<b>Post-conditions</b>		

#### 4.3.10 [ATS\_COMCAN\_00718] Transmission request with Tx cancellation disabled

<b>Test Objective</b>	Transmission request with Tx cancellation disabled
-----------------------	--

<b>ID</b>	ATS_COMCAN_00718	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CAN and CANIF	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANInterface: SWS_CANIF_00281 CANInterface: SWS_CANIF_00070 CANInterface: SWS_CANIF_00183 CANInterface: SWS_CANIF_00383 CANInterface: SWS_CANIF_00058 CANInterface: SWS_CANIF_00438 CANInterface: SWS_CANIF_00542 CANInterface: SWS_CANIF_00439		
<b>Requirements / Reference to Test Environment</b>			
<b>Configuration Parameters</b>	Example configuration: CanIfBufferSize = 0x01 CanIfBufferHthRef = 0x00 CanIfHthCanCtrlIdRef = 0x01 CanIfHthIdSymRef = 0x00 CanHandleType = BASIC CanObjectId = HTH0-0 CanObjectType = TRANSMIT CanIfPublicTxBuffering = TRUE CanIfCtrlDrvTxCancellation = FALSE CanIfPublicReadTxPduNotifyStatusApi = TRUE CanIfTxPduReadNotifyStatus = TRUE CanIfTxPduCanId = 0x708,0x709,0x710 CanIfTxPduCanIdType = STANDARD_CAN CanIfTxPduDlc = 0x03 CanIfTxPduType = STATIC CanIfTxPduUserTxConfirmationUL = PDUR CanIfTxPduUserTxConfirmationName = PduR_CanIfTxConfirmation CanIfTxPduBufferRef = Reference to [CanIfBufferCfg]		
<b>Summary</b>	<p>To check the behaviour of CanIf when test manager software component requests for the transmission of the higher and lower priority Can-Id, in case transmit cancellation is disabled and the upper layer (PduR) is configured for the transmit confirmation.</p> <p><b>Test Description:</b></p> <p>The test manager software component will request for the transmission of the higher and lower priority Can-Id and the frames will be observed on the bus. As this is an indirect testing for reading the transmitted data, the data observed on the bus will be checked for the most recent values.</p>		
<b>Needed Adaptation to other Releases</b>	NA		
<b>Pre-conditions</b>	DUT shall be initialized. ComM module shall be in FULL communication.		

Main Test Execution		
Test Steps		Pass Criteria
Step 1	[SWC] Requests Rte_Write for a signal with value	[SWC] Rte_Write shall return RTE_E_OK.
Step 2	[SWC] Now simultaneously send a signal that belongs to a higher priority CAN ID and trigger Rte_Write for a signal with some value	[LT] Frames shall be observed with the value of first signal. After a particular interval Frame with second signal will be seen.
Post-conditions		

#### 4.3.11 [ATS\_COMCAN\_00719] Transmission Request With Tx Cancellation Disabled And Having Upper Layer As CanTp

<b>Post-conditions</b>		

## 5 RS\_BRF\_01648 - Large Data Type

### 5.1 General Test Objective and Approach

This Test Specification intends to cover the communication transfer of data sizes larger than the maximum transmission unit of the underlying bus as described in the AUTOSAR Feature [RS\_BRF\_01648].

The tests use a test bench environment and Embedded Software Components that use the feature.

This test case document has been established to cover the following features:

**Fig D:** Requirement on Large Data Type.

This specification gives the description of required tests environments (test bench, uses case, arxml files) and detailed tests cases for executing tests.

## 5.1.1 Test System

### 5.1.1.1 Overview on Architecture

In order to cover the required features / sub-features, the different uses cases are created.

#### 5.1.1.1.1 Use case 02.01: CAN Bus

For this use case, the aim is to test the large data type transfer on CAN bus:

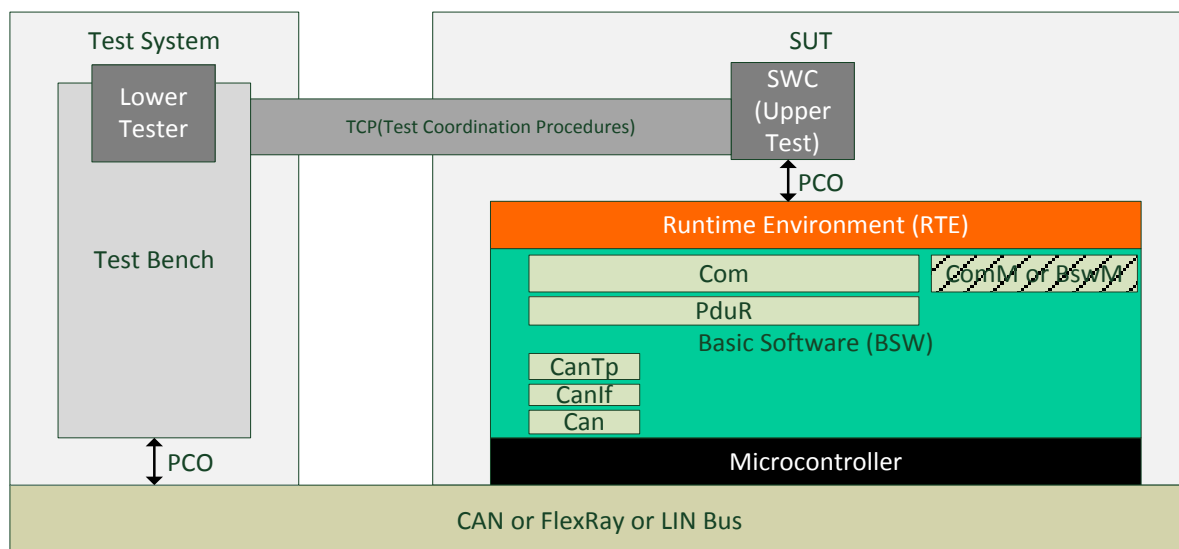

Fig E: Test System Architecture.

The test system architecture consists of Test Bench that executes only test sequencer and gives actions request through Test coordination Procedures to embedded SWC.

### 5.1.1.2 Specific Requirements

Not Applicable.

### 5.1.1.3 Test Coordination Requirements

Not Applicable.

## 5.1.2 Test Configuration

This section describes sets of requirements on configuration.

These sets are later referenced by test cases.

No configuration files are provided. They need to be developed when the test suite is implemented.

**5.1.2.1 Required ECU Extract of System Description Files**

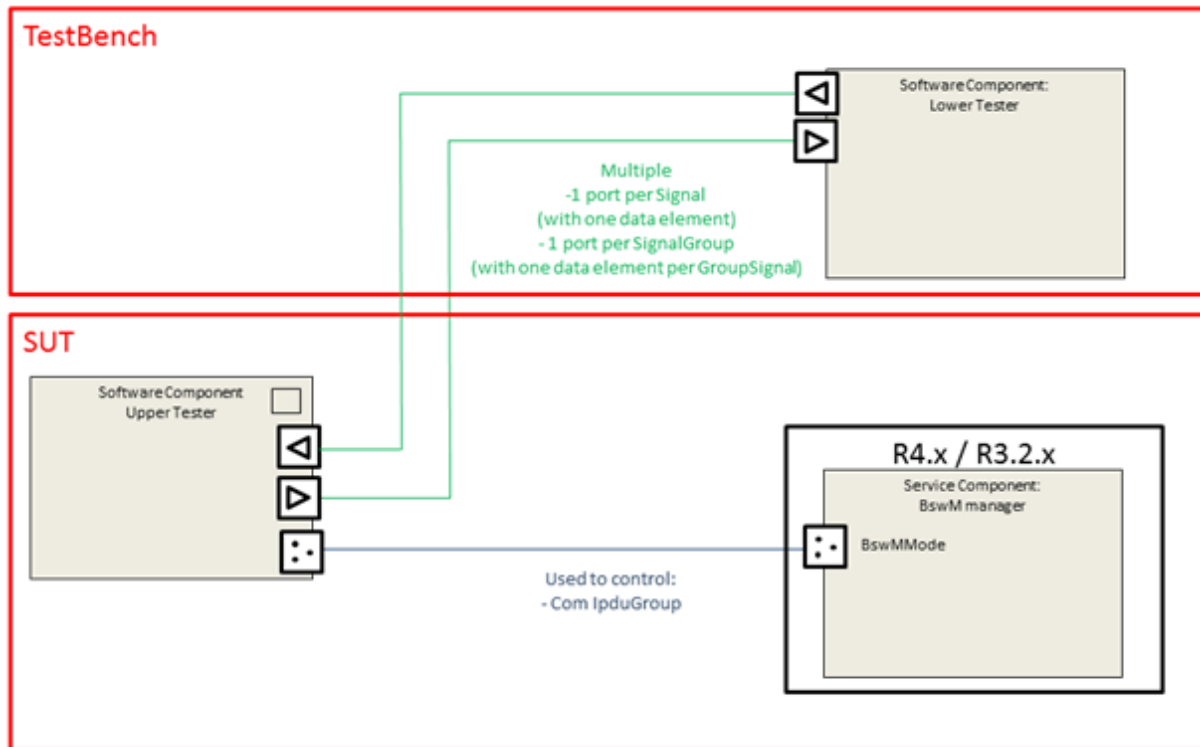

Fig F: SWC Overview on Large Data Type.

A Mode-Switch Interface IF\_AT\_SwC\_ActionsBswM must be created. The SWC Upper Tester is the owner of this state machine and BswM read the state through BswMMode Port. BswM shall launch actions according to following table (check 5.3 Test Cases for details):

ModeDeclaration	BswM Actions
IPDU_ACTIVATED	OnEntry: -Start IpduGroup

For the Software Component point of view, for each test case, the communication interfaces are defined as follow:

Port name	Data element type	Dataelement	Mapping	Type
<TestCaseName>_<signalname>	uint8	<signalname>	<Signalname>	Signal
<TestCaseName>_<signalgroupname>	Struct { uint8: groupsignal1; ... uint8: groupsignalx; }	Groupsignal	Groupsignal1-> <signal1name> Groupsignal2-> <signal2name> <PortName>-> <signalgroupname>	Signal Group

Table 3:

Therefore ports and signals names change according to Test Case number, but the building rule is the same.

#### 5.1.2.1.1 Use Case 02.01: CAN Bus

The communication database is depicted below:

IPduGroup	IPdu	SignalGroup	Signal	Tx ECU	Rx ECU
AT_239_IpduGroup	AT_239_Ipdu		AT_239_Sg1	SUT	TestBench
AT_276_IpduGroup	AT_276_Ipdu		AT_276_Sg1	TestBench	SUT

Table 4:

#### 5.1.2.2 Required ECU Configuration Description Files

The section describes the common EcuC parameters between test cases that are required by the implementer of the test cases.

No specific configuration requirements for ECU Configuration files as they can be derived from EcuExtract.

#### 5.1.2.3 Required Software Component Description Files

The section describes the SWC-D that are required by the implementer of the test cases.

Refer to Fig F.

#### 5.1.2.4 Mandatory vs. Customizable Parts

Mandatory parameters are listed in Tests Cases (see 5.3 Test Cases).

Customizable parameters are (these values are test case independent):

- ComSignalType (ISignal.networkRepresentationProps.swBaseType), ComSignalLength (baseTypeSize) and ComBitSize (ISignal.length) => must be consistent to associated dataElement
- ComSignalInitValue (ISignal.initValue)
- PduLength (Pdu.length)
- ComBitPosition (ISignalToIPduMapping.startPosition) values => the location of these elements in the pdu
- CAN frames identifiers

NOTE: ComSignalInitValue and ComSignalDataInvalidValue are specific to test implementer and signal type.

#### 5.1.3 Test Case Design

Not Applicable.

### 5.2 Re-usable Test Steps

Not Applicable.

## 5.3 Test Cases

### 5.3.1 [ATS\_COMCAN\_00239] Large Data TP transmission on CAN (>= 8 bytes)

<b>Test Objective</b>	Large Data TP transmission on CAN (>= 8 bytes)		
<b>ID</b>	ATS_COMCAN_00239	<b>AUTOSAR Releases</b>	4.0.3 4.1.1 4.2.1 4.2.2
<b>Affected Modules</b>	Com, PduR, CanTp, CanIf, Can	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00118		
<b>Trace to SWS Item</b>	COM: ECUC_Com_00761		
<b>Requirements / Reference to Test Environment</b>	Use Case UC02.01		
<b>Configuration Parameters</b>	<p>ComIpdu(SignalIpdu): AT_239_Ipdu1 (large I-PDU)</p> <ul style="list-style-type: none"> <li>- length = 9 (large, greater than a Single Frame)</li> <li>- ComIpduType = TP(TpConfig.TpConnection)</li> <li>- ComIpduDirection(CommConnectorPort.communicationDirection) = SEND</li> <li>- ComTxModeTrue</li> </ul> <p>(IPduTiming.TransmissionModeDeclaration.transmissionModeTrueTiming)</p> <ul style="list-style-type: none"> <li>-- DIRECT(EventControlledTiming)</li> <li>--- NumberOfRepetitions = 1</li> </ul> <p>ComSignal(ISignalToPduMapping): Sg1</p> <ul style="list-style-type: none"> <li>- dataElement with queued swImplPolicy</li> <li>- DataSendCompletedEvent mapped on signal transmission (ComNotification is configured)</li> <li>- ComTransferProperty (transferProperty) = TRIGGERED</li> </ul> <p>PduRRoutingPath:</p> <ul style="list-style-type: none"> <li>- Routing path for ComIpdu with PduRSrcBswModuleRef = BswMod_Com</li> <li>- PduRDestPdu with PduRDestBswModuleRef = BswMod_CanTP</li> </ul>		
<b>Summary</b>	<p>Aim:</p> <ul style="list-style-type: none"> <li>- Check that Application layer can initiate a TP transmission greater than or equal to 8 bytes on CAN bus</li> </ul>		
<b>Needed Adaptation to other Releases</b>	<p>Configuration: [n/a]</p> <p>Test Steps: [n/a]</p>	<p>Large data types and TP for regular COM is not possible in R3.x.</p> <p>This test case is not applicable for R3.x.</p>	
<b>Pre-conditions</b>	<p>Com stack is initialized</p> <p>AT_239_IpduGroup is running</p>		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[SWC]	[LT<CAN>]	
	Call Rte_Send() for Port AT_239_Sg1 with AT_239_Sg1_Value_1 (Send Signal	First Frame is received Frame length is 8 byte, FF_DL is 9	

	AT_239_Sg1 with AT_239_Sg1_Value_1 (this will initiate a TP transmission with 9 bytes))	bytes
<b>Step 2</b>	<b>[LT&lt;CAN&gt;]</b>  Send Flow Control Clear to Send (BlockSize = 0, STMin = 0). 3 bytes length if PADDING is not activated, 8 bytes otherwise.	<b>[LT&lt;CAN&gt;]</b>  One Consecutive Frame is received (4 bytes length if PADDING is not activated) AT_239_Sg1 value is AT_239_Sg1_Value_1
<b>Post-conditions</b>	Not Applicable	

### 5.3.2 [ATS\_COMCAN\_00276] Large Data TP reception on CAN (>= 8 bytes)

<b>Test Objective</b>	Large Data TP reception on CAN (>= 8 bytes)		
<b>ID</b>	ATS_COMCAN_00276	<b>AUTOSAR Releases</b>	4.0.3 4.1.1 4.2.1 4.2.2
<b>Affected Modules</b>	Com, PduR, CanTp, CanIf, Can	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00118		
<b>Trace to SWS Item</b>	COM: ECUC_Com_00761		
<b>Requirements / Reference to Test Environment</b>	Use Case UC02.01		
<b>Configuration Parameters</b>	ComIPdu(SignalIPdu): AT_276_Ipdu1 (large I-PDU) - length = 9 (large, greater than a Single Frame) - ComIPduType = TP(TpConfig.TpConnection) - ComIPduDirection(CommConnectorPort.communicationDirection) = RECEIVE  ComSignal(ISignalToPduMapping): Sg1 - dataElement with queued swImplPolicy - DataReceivedEvent mapped on signal reception (ComNotification is configured)  PduRRoutingPath: - Routing path for ComIPdu with PduRSrcBswModuleRef = BswMod_CanTP - PduRDestPdu with PduRDestBswModuleRef = BswMod_Com		
<b>Summary</b>	Aim: - Check that Application layer can receive a TP Data greater or equal than 8 bytes on CAN bus		
<b>Needed Adaptation to other Releases</b>	Configuration: [n/a]  Test Steps: [n/a]	Large data types and TP for regular COM is not possible in R3.x.  This test case is not applicable for R3.x.	
<b>Pre-conditions</b>	Com stack is initialized AT_276_IpduGroup is running		

Main Test Execution		
Test Steps		Pass Criteria
Step 1	<b>[LT&lt;CAN&gt;]</b>  Send Signal AT_276_Sg1 with AT_276_Sg1_Value_1 (this will initiate a TP transmission with 9 bytes)	<b>[LT&lt;CAN&gt;]</b>  First Frame is sent Frame length is 8 byte, FF_DL is 9 bytes
Step 2	<b>[LT&lt;CAN&gt;]</b>  Wait reception of Flow Control Clear to Send	<b>[LT&lt;CAN&gt;]</b>  Flow Control Clear to Send is received
Step 3	<b>[LT&lt;CAN&gt;]</b>  Send Consecutive Frame with last data bytes (4 bytes length if PADDING is not activated)	<b>[LT&lt;CAN&gt;]</b>  One Consecutive Frame is received (4 bytes length if PADDING is not activated)
Step 4	<b>[SWC]</b>  Wait DataReceivedEvent	<b>[SWC]</b>  DataReceivedEvent is activated
Step 5	<b>[SWC]</b>  Call Rte_Receive() for AT_276_Sg1	<b>[SWC]</b>  AT_276_Sg1 value is AT_276_Sg1_Value_1 Return Value of Rte_Receive is RTE_E_OK
Post-conditions	Not Applicable	

### 5.3.3 [ATS\_COMCAN\_00836] Transmission Of The Single Frames And Notification For Pdu Transfer Using Standard Addressing Format

Test Objective	Transmission Of The Single Frames And Notification For Pdu Transfer Using Standard Addressing Format		
ID	ATS_COMCAN_00836	AUTOSAR Releases	4.0.3 4.2.1 4.2.2
Affected Modules	CANTP	State	reviewed
Trace to Requirement on Acceptance Test Document			
Trace to SWS Item	CANTransportLayer: SWS_CanTp_00177 CANTransportLayer: SWS_CanTp_00231 CANTransportLayer: SWS_CanTp_00204		
Requirements / Reference to Test Environment	none		
Configuration Parameters	CanTpTxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNcs = - CanTpNbs = 0.1 sec		

	CanTpTxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF	
<b>Summary</b>	To transmit data having the data length less than or equals to 7 bytes from the test manager software component to the tester. As this is an indirect testing for the transmission confirmation. So the Com notification will be given to the test manager software component about the transmission of the signal.	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	[SWC]  Triggers Rte_Write for a signal with a value and SduId	[SWC]  Rte_Write Returns E_OK
<b>Step 2</b>	[LT]  Monitor the frame on the bus and validate the frame on tester	[LT]  Frames shall be observed with the value on bus by the DUT
<b>Step 3</b>	-	[SWC]  Transmission confirmation for the configured signal shall be invoked
<b>Post-conditions</b>	NONE	

### 5.3.4 [ATS\_COMCAN\_00837] Transmission Of The Single Frames And Notification For Pdu Transfer Using Extended Addressing Format

<b>Test Objective</b>	Transmission Of The Single Frames And Notification For Pdu Transfer Using Extended Addressing Format		
<b>ID</b>	ATS_COMCAN_00837	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00177 CANTransportLayer: SWS_CanTp_00231 CANTransportLayer: SWS_CanTp_00204		
<b>Requirements / Reference to Test Environment</b>	none		
<b>Configuration Parameters</b>	CanTpTxAddressingFormat = CanTpExtended Sample configuration: CanTpNTa = 0x34 CanTpNas = 0.1 sec CanTpNcs = - CanTpNbs = 0.1 sec		

	CanTpTxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF	
<b>Summary</b>	To transmit data having the data length less than or equals to 6 bytes from the test manager software component to the tester. As this is an indirect testing for the transmission confirmation. So the Com notification will be given to the test manager software component about the transmission of the signal.	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	[SWC] Trigger Rte_Write API for a signal	[SWC] E_OK shall be returned.
<b>Step 2</b>	[LT] Monitor the frame on the bus and validate the frame on tester	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 3</b>	-	[SWC] Transmission confirmation for the configured signal shall be invoked
<b>Post-conditions</b>	NONE	

### 5.3.5 [ATS\_COMCAN\_00838] Transmission Of The Multi-PDU Frames And Notification For Pdu Transfer Using Standard Addressing Format

<b>Test Objective</b>	Transmission Of The Multi-PDU Frames And Notification For Pdu Transfer Using Standard Addressing Format		
<b>ID</b>	ATS_COMCAN_00838	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00177 CANTransportLayer: SWS_CanTp_00232 CANTransportLayer: SWS_CanTp_00204		
<b>Requirements / Reference to Test Environment</b>	none		
<b>Configuration Parameters</b>	CanTpTxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNcs = - CanTpNbs = 0.1 sec CanTpTxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF		

<b>Summary</b>	To transmit data having the data length more than 7 bytes from the test manager software component to the tester. As this is an indirect testing for the transmission confirmation. So the Com notification will be given to the test manager software component about the transmission of the signal.	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	[SWC] Triggers Rte_Write API for a signal Sg1 with a value and Sduld	[SWC] E_OK shall be returned.
<b>Step 2</b>	[LT] Monitor the frame on the bus and validate the frame on tester	[LT] Frames shall be observed with the value on bus by the DUT  Flow Control frame with value expected to be received in the DUT
<b>Step 3</b>	[LT] Monitor the frame on the bus and validate the frame on tester after the reception of flow control frame in the DUT	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 4</b>	-	[SWC] Transmission confirmation for the configured signal shall be invoked
<b>Post-conditions</b>	NONE	

### 5.3.6 [ATS\_COMCAN\_00839] Transmission Of The Multi-PDU Frames And Notification For Pdu Transfer Using Extended Addressing Format

<b>Test Objective</b>	Transmission Of The Multi-PDU Frames And Notification For Pdu Transfer Using Extended Addressing Format		
<b>ID</b>	ATS_COMCAN_00839	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00177 CANTransportLayer: SWS_CanTp_00232 CANTransportLayer: SWS_CanTp_00204		
<b>Requirements / Reference to Test Environment</b>	none		
<b>Configuration</b>	CanTpTxAddressingFormat = CanTpExtended		

<b>Parameters</b>	Sample configuration: CanTpNTa = 0x36 CanTpNas = 0.1 sec CanTpNcs = - CanTpNbs = 0.1 sec CanTpTxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF	
<b>Summary</b>	To transmit data having the data length more than 6 bytes from the test manager software component to the tester. As this is an indirect testing for the transmission confirmation. So the Com notification will be given to the test manager software component about the transmission of the signal.	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	[SWC]  Triggers Rte_Write for a signal Sg1 with value and Sduld	[SWC]  E_OK shall be returned.
<b>Step 2</b>	[LT]  Monitor the frame on the bus and validate the frame on tester	[LT]  Frames shall be observed with the value on bus by the DUT  Flow Control frame with value is expected to be received in the DUT
<b>Step 3</b>	[LT]  Monitor the frame on the bus and validate the frame on tester after the reception of flow control frame in the DUT	[LT]  Frames shall be observed with the value on bus by the DUT
<b>Step 4</b>	-	[SWC] Transmission confirmation for the configured signal shall be invoked
<b>Post-conditions</b>	NONE	

### 5.3.7 [ATS\_COMCAN\_00840] Reception Of The Single Frames With SDU Padding Off

<b>Test Objective</b>	Reception Of The Single Frames With SDU Padding Off		
<b>ID</b>	ATS_COMCAN_00840	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00079 CANTransportLayer: SWS_CanTp_00084		

	CANTransportLayer: SWS_CanTp_00098 CANTransportLayer: SWS_CanTp_00116	
<b>Requirements / Reference to Test Environment</b>	none	
<b>Configuration Parameters</b>	CanTpRxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNbr = 0.1 sec CanTpNcr = 1 sec CanTpRxDI = 3 CanTpRxPaddingActivation = CanTpOff CanTpPaddingByte = 0xFF	
<b>Summary</b>	<p>The data will be sent from the tester to the DUT to check the reception process and will be notified to the upper layer (PduR).</p> <p>As the CanTpRxPaddingActivation parameter is set to OFF the CanTp module shall check the frame data length. If a frame is received with an unexpected data length (check only for too short DLCs) the frame shall be ignored otherwise it is passed to the upper layer.</p> <p>As this is an indirect testing i.e. the Com notification will be given to the test manager software component about the reception and the data will be read by the RTE.</p>	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	[LT]  Send a frame with Can-Id and Data to the DUT from tester	[SWC]  Com notification for the configured signal shall be invoked
<b>Step 2</b>	[SWC] Trigger Rte_Read API to read the signal	[SWC] Data shall be updated similar to what is observed on the bus
<b>Post-conditions</b>	None	

### 5.3.8 [ATS\_COMCAN\_00841] Behaviour Of CanTp When A Frame With Unexpected Data Length Is Received With SDU Padding Off

<b>Test Objective</b>	Behaviour Of CanTp When A Frame With Unexpected Data Length Is Received With SDU Padding Off		
<b>ID</b>	ATS_COMCAN_00841	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS</b>	CANTransportLayer: SWS_CanTp_00079		

<b>Item</b>	CANTransportLayer: SWS_CanTp_00084 CANTransportLayer: SWS_CanTp_00098 CANTransportLayer: SWS_CanTp_00116	
<b>Requirements / Reference to Test Environment</b>	none	
<b>Configuration Parameters</b>	CanTpRxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNbr = 0.1 sec CanTpNcr = 1 sec CanTpRxDI = 8 CanTpRxPaddingActivation = CanTpOff CanTpPaddingByte = 0xFF	
<b>Summary</b>	<p>The data will be sent from the tester to the DUT to check the reception process and will be notified to the upper layer (PduR).</p> <p>As the CanTpRxPaddingActivation parameter is set to OFF the CanTp module shall check the frame data length. If a frame is received with an unexpected data length (check only for too short DLCs) the frame shall be ignored otherwise it is passed to the upper layer.</p> <p>As this is an indirect testing i.e. the Com notification will be given to the test manager software component about the reception and the data will be read by the RTE.</p>	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	[LT]  Transmit a frame with canId and data with wrong/unexpected data length to the DUT from tester	[SWC]  Com notification for the configured signal shall be not invoked
<b>Post-conditions</b>	NONE	

### 5.3.9 [ATS\_COMCAN\_00842] Reception Of The Multi-PDU Frames With SDU Padding On

<b>Test Objective</b>	Reception Of The Multi-PDU Frames With SDU Padding On		
<b>ID</b>	ATS_COMCAN_00842	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00079 CANTransportLayer: SWS_CanTp_00084 CANTransportLayer: SWS_CanTp_00116		

<b>Requirements / Reference to Test Environment</b>	none
<b>Configuration Parameters</b>	CanTpRxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNbr = 0.1 sec CanTpNcr = 1 sec CanTpRxDI = 8 CanTpRxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF
<b>Summary</b>	The data will be sent from the tester to the DUT to check the reception process and will be notified to the upper layer (PduR). While receiving the frames from the tester if the CanTpRxPaddingActivation parameter is set to ON then a received N-PDU shorter than 8 bytes will be considered corrupt by CanTp. As this is an indirect testing i.e. the Com notification will be given to the test manager software component about the reception and the data will be read by the RTE.
<b>Needed Adaptation to other Releases</b>	
<b>Pre-conditions</b>	ComM shall be in full communication
<b>Main Test Execution</b>	
<b>Test Steps</b>	
<b>Step 1</b>	[LT]  Transmit a frame with Can-Id and Data with lesser than 8 bytes to the DUT from tester
<b>Step 2</b>	[LT]  Monitor the frame on the bus and validate the frame on tester and flow control frames are expected from the tester
<b>Step 3</b>	[SWC]  Triggers Rte_Read API to read the signal
<b>Post-conditions</b>	NONE

### 5.3.10 [ATS\_COMCAN\_00843] Behaviour Of CanTp When Flow Control Frames Are Not Received After A Certain Amount Of Time During Transmission Of Multi-PDU Frames

<b>Test Objective</b>	Behaviour Of CanTp When Flow Control Frames Are Not Received After A Certain Amount Of Time During Transmission Of Multi-PDU Frames		
<b>ID</b>	ATS_COMCAN_00843	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed

<b>Trace to Requirement on Acceptance Test Document</b>		
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00316	
<b>Requirements / Reference to Test Environment</b>	none	
<b>Configuration Parameters</b>	CanTpRxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNbr = 0.1 sec CanTpNcr = 1 sec CanTpNbs = 1 sec CanTpRxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF	
<b>Summary</b>	To transmit data having the data length more than 7 bytes from the test manager software component to the tester. After the first frame is transmitted the wait for the flow control frame has to be deliberately extended beyond the timer N_Bs. When the timer expires CanTp will abort the current transmission.	
<b>Needed Adaptation to other Releases</b>		
<b>Pre-conditions</b>	ComM shall be in full communication	
<b>Main Test Execution</b>		
<b>Test Steps</b>	<b>Pass Criteria</b>	
<b>Step 1</b>	[SWC] Triggers Explicit Inter Rte_Write API for a signal Sg1 with value and Sduld	[SWC] E_OK shall be returned.
<b>Step 2</b>	[LT] Monitor the frame on the bus and validate the frame on tester and flow control frames are expected from the tester	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 3</b>	[LT] After the expiry of the Timer N_Bs monitor and validate the frame on tester	[LT] Frames shall not be observed on bus by the DUT
<b>Post-conditions</b>	NONE	

### 5.3.11 [ATS\_COMCAN\_00844] Behaviour Of CanTp When An Application Tries To Send Another Segmented Frame During The Time CanTp Waits For The FC Frame Fo An Ongoing Transmission

<b>Test Objective</b>	Behaviour Of CanTp When An Application Tries To Send Another Segmented Frame During The Time CanTp Waits For The FC Frame Fo An Ongoing Transmission		
<b>ID</b>	ATS_COMCAN_00844	<b>AUTOSAR</b>	4.0.3 4.2.1 4.2.2

		<b>Releases</b>	
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00096		
<b>Requirements / Reference to Test Environment</b>	none		
<b>Configuration Parameters</b>	CanTpRxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNbr = 0.1 sec CanTpNcr = 1 sec CanTpNbs = 1 sec CanTpRxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF		
<b>Summary</b>	To transmit data having the data length more than 7 bytes from the test manager software component to the tester. The second frame has to be deliberately introduced in-between the already initiated transmission of the first frame.		
<b>Needed Adaptation to other Releases</b>			
<b>Pre-conditions</b>	ComM shall be in full communication		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[SWC]  Triggers Explicit Inter Rte_Write API for a signal Sg1 with value and Sduld	[SWC]	Rte_Write shall return RTE_E_OK.
<b>Step 2</b>	[LT]  Monitor the frame on the bus and validate the frame on tester and flow control frames are expected from the tester	[LT]	Frames shall be observed with the value on bus by the DUT
<b>Step 3</b>	[SWC]  Before the expiry of timer N_Bs test riggers Explicit Inter Rte_Write API for a signal Sg2 with value and Sduld	[SWC]	Rte_Write shall return RTE_E_OK.
<b>Step 4</b>	[LT]  Monitor the frame on the bus and validate the frame on tester and flow control frames are expected from the tester	[LT]	Frames shall be observed with the value on bus by the DUT Flow Control frame is expected to be received in the DUT
<b>Step 5</b>	[LT]  Monitor the frame on the bus and validate the frame on tester after the reception of flow control frame in the DUT	[LT]	Frames shall be observed with the value on bus by the DUT

<b>Step 6</b>	-	[SWC]  Transmission confirmation for the configured signal shall be invoked
<b>Post-conditions</b>	NONE	

### 5.3.12 [ATS\_COMCAN\_00845] Transmission Of A Large N-SDU

<b>Test Objective</b>	Transmission Of A Large N-SDU		
<b>ID</b>	ATS_COMCAN_00845	<b>AUTOSAR Releases</b>	4.0.3 4.2.1 4.2.2
<b>Affected Modules</b>	CANTP	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>			
<b>Trace to SWS Item</b>	CANTransportLayer: SWS_CanTp_00232		
<b>Requirements / Reference to Test Environment</b>	none		
<b>Configuration Parameters</b>	CanTpRxAddressingFormat = CanTpStandard Sample configuration: CanTpNas = 0.1 sec CanTpNbr = 0.1 sec CanTpNcr = 1 sec CanTpNbs = 1 sec CanTpNcs = 0.1 sec CanTpBs = 2 CanTpSTmin = 10 ms CanTpRxPaddingActivation = CanTpOn CanTpPaddingByte = 0xFF		
<b>Summary</b>	To transmit a large N-SDU having data length as 32 bytes from the test manager software component to the tester.		
<b>Needed Adaptation to other Releases</b>			
<b>Pre-conditions</b>	ComM shall be in full communication		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[SWC]  Triggers Explicit Inter Rte_Write API to write a signal Sg1 with value and Sduld	[SWC]  E_OK shall be returned.	
<b>Step 2</b>	[LT]  Monitor the frame on the bus and validate the frame on tester and flow control frame is expected from the tester	[LT]  Frames shall be observed with the value on bus by the DUT Flow Control frame with value is expected to be received in the DUT	

<b>Step 3</b>	[LT] Monitor the frame on the bus and validate the frame on tester after the reception of flow control frame in the DUT	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 4</b>	[LT] Monitor the frame on the bus and validate the frame on tester for consecutive frames	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 5</b>	[LT] Monitor the frame on the bus and validate the frame on tester for the second flow control frame	[LT] Flow Control frame with value is expected for the second time as Block Size
<b>Step 6</b>	[LT] Monitor the frame on the bus and validate the frame on tester after the reception of second flow control frame in the DUT	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 7</b>	[LT] Monitor the frame on the bus and validate the frame on tester for second consecutive frame	[LT] Frames shall be observed with the value on bus by the DUT
<b>Step 8</b>	-	[SWC] Transmission confirmation for the configured signal shall be invoked
<b>Post-conditions</b>	NONE	

## 6 RS\_BRF\_01707 – CAN Bus Off handling

### 6.1 General Test Objective and Approach

The “CAN Bus-Off” feature is tested by setting the conditions which should trigger Bus-Off, transitions between internal states, Bus-Off recovery and then checking whether the transitions are performed correctly, following the right timing constraints.

#### 6.1.1 Test System

##### 6.1.1.1 Overview on Architecture

The basic test setup is depicted in the following figure:

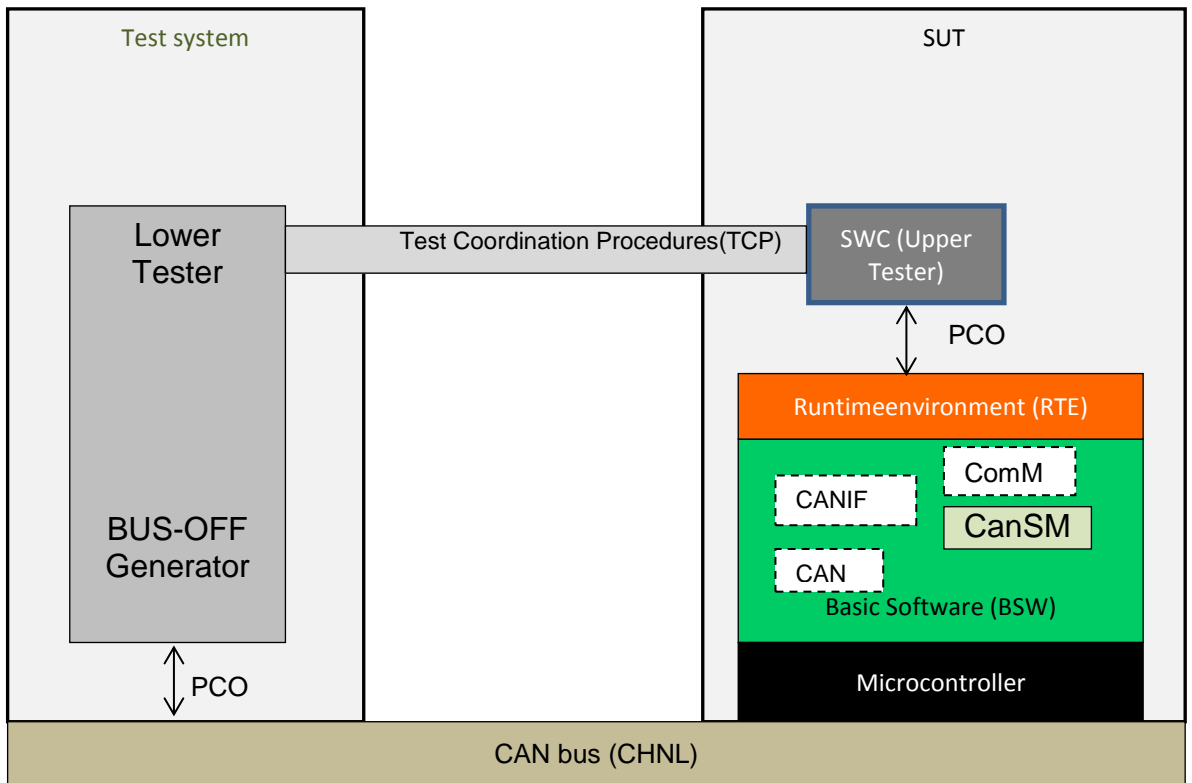

Fig G: Test System Architecture for BUS-OFF.

Figure1: Test Architecture

##### 6.1.1.2 Specific Requirements

Lower Tester simulates Bus-Off with the help of a custom made tool which can generate Bus-Off in CHNL either by

- Creating a short circuit and then by transmitting a message from the SUT
- A disturbance in the CAN messages. Sent by the SUT

It is up to the test system designer/ implementer to decide how to generate Bus-Off.

Internal states of SUT shall be verified by checking the invocation of Rte\_Mode API. A tester shall be connected to the test ECU CHNL for reading the logged Events.

An internal timer TMR-1 shall be used to verify the timing requirements.

### 6.1.1.3 Test Coordination Requirements

“Test Coordination Procedures” are needed to collect the test results of the SWC and the Remaining bus simulation at one central place, in order to derive the test verdict. It is up to the test system designer/implementer to define that “central place” and to design/implement the test coordination functionality.

### 6.1.2 Test Configuration

This section describes sets of requirements on configuration.

These sets are later referenced by test cases.

No configuration files are provided. They need to be developed when the test suite is implemented.

#### 6.1.2.1 Required ECU Extract of System Description Files

The section describes the common EcuC parameters between test cases that are required by the implementer of the test cases.

No specific configuration requirements for ECU Configuration files as they can be derived from EcuExtract.

#### 6.1.2.2 Required ECU Configuration Description Files

Each test case requires some configuration parameters of the SUT to be set with a specific value or within a given range. The test cases below are then provided along with 2 configuration sets (BUSOFF\_PS001, BUSOFF\_PS002). Each test case description includes a field mentioning the configuration sets which are applicable to that test case among these proposals.

##### 6.1.2.2.1 Parameter Set [BUSOFF\_PS001]

<b>SUT configuration parameters</b>	Parameter name	Value
	CanSMMainFunctionTimePeriod	10 msec
	CanSMBorCounterL1ToL2	20
	CanSMBorTimeL1	2000 msec
	CanSMBorTimeL2	2000 msec
	CanSMBorTimeTxEnsured	1500 msec
	CanSMBorTxConfirmationPolling	false

Table 5:

##### 6.1.2.2.2 Parameter Set [BUSOFF\_PS002]

<b>SUT configuration parameters</b>	Parameter name	Value
	CanSMMainFunctionTimePeriod	10 msec
	CanSMBorCounterL1ToL2	2
	CanSMBorTimeL1	4000 msec
	CanSMBorTimeL2	8000 msec

	CanSMBorTimeTxEnsured	1500 msec	
	CanSMBorTxConfirmationPolling	true	

Table 6:

### 6.1.2.3 Mandatory vs. Customizable Parts

Timing's (CanSMBorTimeL1, CanSMBorTimeL2 and CanSMBorTimeTxEnsured) and counter (CanSMBorCounterL1ToL2) values may be changed to the user's requirements or typical values.

### 6.1.3 Test Case Design

The test cases check that the SUT follows the state transitions defined in CanSM SWS with the required behavior. States and behavior can only be observed indirectly because of the ICC1 approach of acceptance testing. Thus the behavior on the bus, on the RTE and the diagnostic modules will be observed. State changes can be triggered only from outside of the SUT thus the bus has to be disturbed directly.

The test cases cover

- state change transitions triggered by Bus-Off generation and release
- behavior to the bus
- behavior to the RTE
- behavior to Events ( Behaviour related to DEM Event )
- timing behaviour (Behaviour related to Configurable timing parameters – Ref sec 5.1.2.2)

## 6.2 Re-usable Test Steps

Creation of BUS-OFF scenario can be re-used in all the test cases.

## 6.3 Test Cases

### 6.3.1 [ATS\_COMCAN\_00269] Switching of communication mode during Bus-Off

<b>Test Objective</b>	Switching of communication mode during Bus-Off		
<b>ID</b>	ATS_COMCAN_00269	<b>AUTOSAR Releases</b>	4.0.3 4.1.1 4.2.1 4.2.2
<b>Affected Modules</b>	CanSM, ComM	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00101 ATR: ATR_ATR_00104		
<b>Trace to SWS Item</b>	CANStateManager: SWS_CanSM_00496 CANStateManager: SWS_CanSM_00498 CANStateManager: SWS_CanSM_00521 CANStateManager: SWS_CanSM_00522 COMManager: SWS_ComM_00091 COMManager: SWS_ComM_00778		

<b>Requirements / Reference to Test Environment</b>	Test environment shall be able to generate a Bus-Off in the Test ECU	
<b>Configuration Parameters</b>	See [BUSOFF_PS001]	
<b>Summary</b>	<p>Test whether CanSM is able to perform state transition based on Bus-Off notification and release.</p> <p>Bus-Off mode switch and its release is observed by</p> <ul style="list-style-type: none"> <li>• events retrieved through diagnostic interface</li> <li>• the Rte_Mode API</li> <li>• the CAN bus under test itself</li> </ul>	
<b>Needed Adaptation to other Releases</b>	<b>Needed Adaptation for Release [3.2.2]</b>	
	<p>Configuration: none</p> <p>Test Steps: low</p>	<p>Same requirements on configuration</p> <p>DEM events for bus off have fixed name in R3.2</p> <p>Same test step sequence</p>
<b>Pre-conditions</b>	All the communication channels are initialized	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	<p>[SWC]</p> <p>Requests ComM to switch to COMM_FULL_COMMUNICATION using Rte_Call_comRequest_RequestComMode</p>	<p>[SWC]</p> <p>Call to Rte_Call_comRequest_RequestComMode returns E_OK</p> <p>Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_FULL_COMMUNICATION</p>
<b>Step 2</b>	<p>[SWC]</p> <p>Trigger a communication sequence in the SUT- Example - ComIPduGroup start</p>	<p>[LT&lt;CAN&gt;]</p> <p>Valid frames are observed in the Bus</p>
<b>Step 3</b>	<p>[CP]</p> <p>WAIT till (CanSMBorTimeTxEnsured + 1s) time</p> <p>WHILE WAITING, DO nothing</p>	-

	Note: This delay is to provide enough time for the SUT to log the Events.	
<b>Step 4</b>	[SWC]  Check the Events	[SWC]  Event CANSM_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PASSED  [SWS_CanSM_00496][SWS_CanSM_00498]
<b>Step 5</b>	[LT<CAN>]  Generate Bus-Off in the Test ECU	-
<b>Step 6</b>	[CP]  WAIT till (CanSMBorTimeL1 / 2)  WHILE WAITING, DO nothing	-
<b>Step 7</b>	[SWC]  Trigger a communication sequence in the SUT- Example - IPDU group start	[LT<CAN>]  - No valid frames are observed in the Bus
<b>Step 8</b>	[SWC]  Check the Events	[SWC]  Event CANSM_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PREFAILED  [SWS_CanSM_00522]
<b>Step 9</b>	[SWC]  Check whether the SUT is in COMM_SILENT_COMMUNICATION	[SWC]  Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_SILENT_COMMUNICATION  [SWS_CanSM_00521][SWS_ComM_00091][SWS_ComM_00778]
<b>Step 10</b>	[LT<CAN>]  End generation of Bus-Off in the Test ECU	-
<b>Step 11</b>	[CP]  WAIT till (CanSMBorTimeL1 + 1.5s)  WHILE WAITING, DO nothing	-
<b>Step 12</b>	[SWC]  Check the Events	[SWC]  Event CANSM_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PASSED  [SWS_CanSM_00498]

<b>Step 13</b>	[SWC]  Check whether the SUT is in COMM_FULL_COMMUNICATION	[SWC]  Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_FULL_COMMUNICATION  [SWS_ComM_00091][SWS_ComM_00778]
<b>Step 14</b>	[LT<CAN>]  BUS-OFF should be re-covered	[LT<CAN>]  Valid frames are observed in the Bus
<b>Post-conditions</b>	-	

### 6.3.2 [ATS\_COMCAN\_00270] Retaining FULL com in case of no BusOff with disabled CanSMBorTxConfirmationPolling

<b>Test Objective</b>	Retaining FULL com in case of no BusOff with disabled CanSMBorTxConfirmationPolling		
<b>ID</b>	ATS_COMCAN_00270	<b>AUTOSAR Releases</b>	4.0.3 4.1.1 4.2.1 4.2.2
<b>Affected Modules</b>	CanSM	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00101		
<b>Trace to SWS Item</b>	CANStateManager: SWS_CanSM_00496 CANStateManager: SWS_CanSM_00498		
<b>Requirements / Reference to Test Environment</b>	-		
<b>Configuration Parameters</b>	See [BUSOFF_PS001]		
<b>Summary</b>	<p>This test cases tests the ability of retaining in the FULL communication mode in case of no Bus-Off event when CanSMBorTxConfirmationPolling is disabled</p> <p>Test whether CanSM is able to enter and stay in FULL communication mode in case of no Bus-Off event. The CAN-Bus under test and Events are observed.</p>		
<b>Needed Adaptation to other Releases</b>	<b>Needed Adaptation for Release [3.2.2]</b>		
	Configuration: none	Same requirements on configuration	
	Test Steps: low	DEM events for bus off have fixed name in R3.2	
		Same test step sequence	

<b>Pre-conditions</b>	All the communication channels are initialized	
<b>Main Test Execution</b>		
	<b>Test Steps</b>	<b>Pass Criteria</b>
<b>Step 1</b>	[SWC]  Requests ComM to switch to COMM_FULL_COMMUNICATION using Rte_Call_comRequest_RequestComMode	[SWC]  Call to Rte_Call_comRequest_RequestComMode returns E_OK  Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_FULL_COMMUNICATION
<b>Step 2</b>	[SWC]  Trigger a communication sequence in the SUT- Example - ComIPduGroup start	[LT<CAN>]  Valid frames are observed in the Bus  Note: To ensure that the channel is in COMM_FULL_COMMUNICATION
<b>Step 3</b>	[CP]  WAIT till (CanSMBorTimeTxEnsured + 1s) time  WHILE WAITING, DO nothing	-
<b>Step 4</b>	[SWC]  Check the Events	[SWC]  Event CANSMB_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PASSED  [SWS_CanSM_00496][SWS_CanSM_00498]
<b>Step 5</b>	[CP]  WAIT for 1 sec  WHILE WAITING, DO: Check the invocation of Rte_Mode API	[SWC]  Rte_Mode API is not invoked  Note: This ensures that no mode switches are observed during the test cycle.
<b>Post-conditions</b>	-	

### 6.3.3 [ATS\_COMCAN\_00271] Retaining FULL com in case of no BusOff with enabled CanSMBorTxConfirmationPolling

<b>Test Objective</b>	Retaining FULL com in case of no BusOff with enabled CanSMBorTxConfirmationPolling		
<b>ID</b>	ATS_COMCAN_00271	<b>AUTOSA</b>	4.0.3 4.1.1 4.2.1 4.2.2

		<b>R Release s</b>	
<b>Affected Modules</b>	CanSM	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00101		
<b>Trace to SWS Item</b>	CANStateManager: SWS_CanSM_00497 CANStateManager: SWS_CanSM_00498		
<b>Requireme nts / Reference to Test Environme nt</b>	-		
<b>Configurati on Parameters</b>	See [BUSOFF_PS002]		
<b>Summary</b>	<p>This test case tests the ability of retaining in the FULL communication mode in case of no Bus-Off event when CanSMBorTxConfirmationPolling is enabled</p> <p>Test whether CanSM is able to enter and stay in FULL communication mode in case of no Bus-Off event. The CAN-Bus under test and Events are observed.</p>		
<b>Needed Adaptation to other Releases</b>	<b>Needed Adaptation for Release [3.2.2]</b>		
	Configuration: none	Same requirements on configuration	
	Test Steps: low	DEM events for bus off have fixed name in R3.2	
		Same test step sequence	
<b>Pre- conditions</b>	All the communication channels in SUT are initialized		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[SWC]  Requests ComM to switch to COMM_FULL_COMMUNICATION using Rte_Call_comRequest_RequestComMode	[SWC]  Call to Rte_Call_comRequest_RequestComMode returns E_OK  Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_FULL_COMMUNICATION	
<b>Step 2</b>	[SWC]  Trigger a communication sequence in the SUT- Example -	[LT<CAN>]  Valid frames are observed in the Bus	

	ComIPduGroup start	Note: To ensure that the channel is in COMM_FULL_COMMUNICATION
<b>Step 3</b>	[SWC]  Check the Events	[SWC]  Event CANSM_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PASSED  [SWS_CanSM_00497][SWS_CanSM_00498]
<b>Step 4</b>	[CP]  WAIT for 1 sec  WHILE WAITING, DO: Check the invocation of Rte_Mode API	[SWC]  Rte_Mode API is not invoked  Note: This ensures that no mode switches are observed during the test cycle.
<b>Post-conditions</b>	-	

#### 6.3.4 [ATS\_COMCAN\_00272] Behavior of SUT during short recovery time

<b>Test Objective</b>	Behavior of SUT during short recovery time		
<b>ID</b>	ATS_COMCAN_00272	<b>AUTOSAR Releases</b>	4.0.3 4.1.1 4.2.1 4.2.2
<b>Affected Modules</b>	CanSM	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00101 ATR: ATR_ATR_00104		
<b>Trace to SWS Item</b>	CANStateManager: SWS_CanSM_00375 CANStateManager: SWS_CanSM_00498 CANStateManager: SWS_CanSM_00522		
<b>Requirements / Reference to Test Environment</b>	Test environment shall be able to generate a Bus-Off in the Test ECU		
<b>Configuration Parameters</b>	See [BUSOFF_PS002]		
<b>Summary</b>	This test cases tests the behavior of the SUT during short recovery time.  Test the behavior of SUT in:  a. handling the application requests during the short recovery time		

	<p>b. handling the received messages during the Bus-Off recovery cycle</p> <p>The test procedure generates Bus-Off, waits short Bus-Off recovery time and releases Bus-Off again. The correct behavior in the respective states is observed</p> <ul style="list-style-type: none"> <li>• on the bus (transmission of frames and acknowledgement of received frames)</li> <li>• on the RTE (application requests)</li> <li>• by events retrieved through diagnostic interface</li> </ul>	
<b>Needed Adaptation to other Releases</b>	<b>Needed Adaptation for Release [3.2.2]</b>	
	Configuration: none	<p>Same requirements on configuration</p> <p>DEM events for bus off have fixed name in R3.2</p>
	Test Steps: low	Same test step sequence
<b>Pre-conditions</b>	All the communication channels are initialized	
<b>Main Test Execution</b>		
<b>Test Steps</b>		<b>Pass Criteria</b>
<b>Step 1</b>	<p>[SWC]</p> <p>Requests ComM to switch to COMM_FULL_COMMUNICATION using Rte_Call_comRequest_RequestComMode</p>	<p>[SWC]</p> <p>Call to Rte_Call_comRequest_RequestComMode returns E_OK</p> <p>Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_FULL_COMMUNICATION</p>
<b>Step 2</b>	<p>[LT&lt;CAN&gt;]</p> <p>Generate Bus-Off in the Test ECU</p>	<p>[LT&lt;CAN&gt;]</p> <p>No valid frames are observed in the Bus</p>
<b>Step 3</b>	<p>[SWC]</p> <p>Check the Events</p>	<p>[SWC]</p> <p>Event CANSM_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PREFAILED</p> <p>[SWS_CanSM_00522]</p>
<b>Step 4</b>	<p>[SWC]</p> <p>Requests ComM to switch to COMM_NO_COMMUNICATION using Rte_Call_comRequest_RequestComMode</p>	<p>[SWC]</p> <p>Call to Rte_Call_comRequest_RequestComMode returns E_NOT_OK</p> <p>[SWS_CanSM_00375]</p>
<b>Step 5</b>	<p>[SWC]</p> <p>Requests ComM to switch to COMM_FULL_COMMUNICATION using Rte_Call_comRequest_RequestComMode</p>	<p>[SWC]</p> <p>Call to Rte_Call_comRequest_RequestComMode returns E_NOT_OK</p> <p>[SWS_CanSM_00375]</p>

<b>Step 6</b>	[CP]  WAIT till (CanSMBorTimeL1 / 2).  WHILE WAITING, DO nothing	-
<b>Step 7</b>	[SWC]  Trigger a communication sequence in the SUT- Example - ComIPduGroup start	[LT<CAN>]  No valid frames are observed in the Bus
<b>Step 8</b>	[LT<CAN>]  End generation of Bus-Off in the Test ECU	-
<b>Step 9</b>	[LT<CAN>]  Send one message from the Tester to the test ECU	[LT<CAN>]  Test ECU acknowledges the message and no error frames are observed in the Bus
<b>Step 10</b>	[CP]  WAIT till (CanSMBorTimeL1 + 1s)  WHILE WAITING, DO nothing	-
<b>Step 11</b>	[SWC]  Check the Events	[SWC]  Event CANSM_E_BUS_OFF is logged with status as DEM_EVENT_STATUS_PASSED  [SWS_CanSM_00498]
<b>Step 12</b>	[SWC]  Check whether the SUT is in COMM_FULL_COMMUNICATION	[SWC]  Rte_Mode API is invoked with mode as RTE_MODE_ComMode_COMM_FULL_COMMUNICATION
<b>Step 13</b>	[LT<CAN>]  BUS-OFF should be re-covered	[LT<CAN>]  Valid frames are observed in the Bus
<b>Post-conditions</b>	-	-

### 6.3.5 [ATS\_COMCAN\_00273] Behavior of SUT during long recovery time

<b>Test Objective</b>	Behavior of SUT during long recovery time		
<b>ID</b>	ATS_COMCAN_00273	<b>AUTOSAR Releases</b>	4.0.3 4.1.1 4.2.1 4.2.2
<b>Affected Modules</b>	CanSM, ComM	<b>State</b>	reviewed

## 7 RS\_BRF\_01649 - LdCom Large Data Transfer

### 7.1 General Test Objective and Approach

This Test Specification intends to cover communication transfer of array type signals, using LdCom as Interaction Layer on CAN bus as described in AUTOSAR Feature [RS\_BRF\_01649].

The tests use a test bench environment and Embedded Software Components that uses the feature.

This test case document has been established to cover the following features:

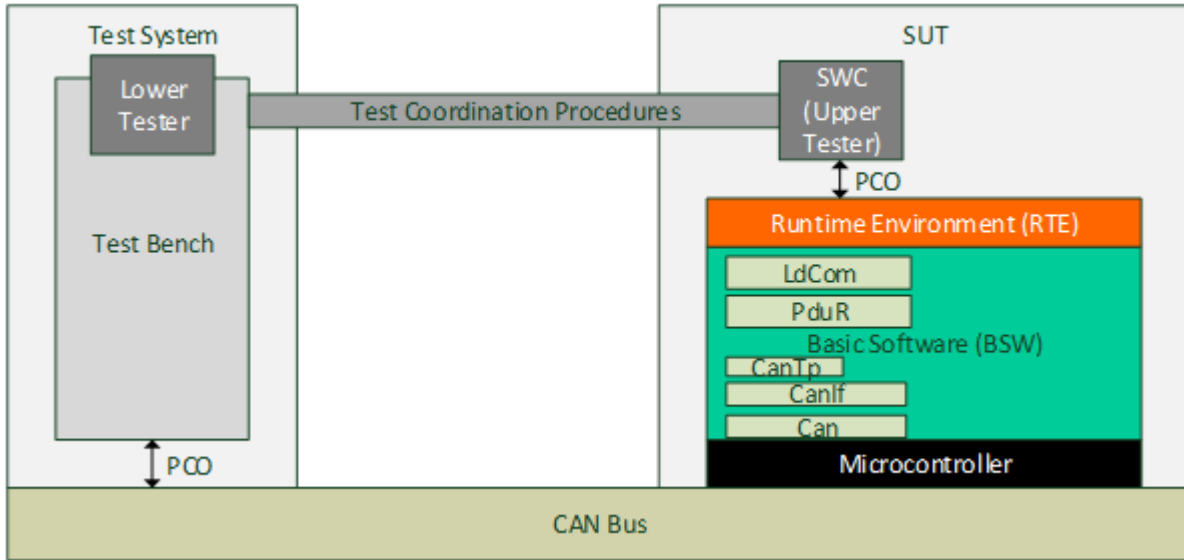

**Fig H: Mindmap of features covered and not covered in the test cases**

This specification gives the description of required test environment (Test Bench, Use cases, arxml files) and detailed test case for executing tests.

#### 7.1.1 Test System

##### 7.1.1.1 Overview on Architecture

In order to cover the required features/sub-features, the environment has been separated into several Use cases.

**Fig I: Test System architecture**

The Test System architecture consists of Test Bench that executes only test sequences and gives action request through test coordination procedures to embedded SWC.

#### **7.1.1.1.1 Use case 03.02: Data Transfer of Arrays Signal of size more than <BUS> Capability**

For this use case, the aim is to test data transfer features of LdCom, for array signal of length greater than underlying CAN bus capability.

#### **7.1.1.1.2 Use case 03.03: Data Transfer of Dynamic Array size Signals**

For this use case, the aim is to test data transfer features of LdCom, for dynamic array signal on CAN bus.

#### **7.1.1.2 Specific Requirements**

Not Applicable.

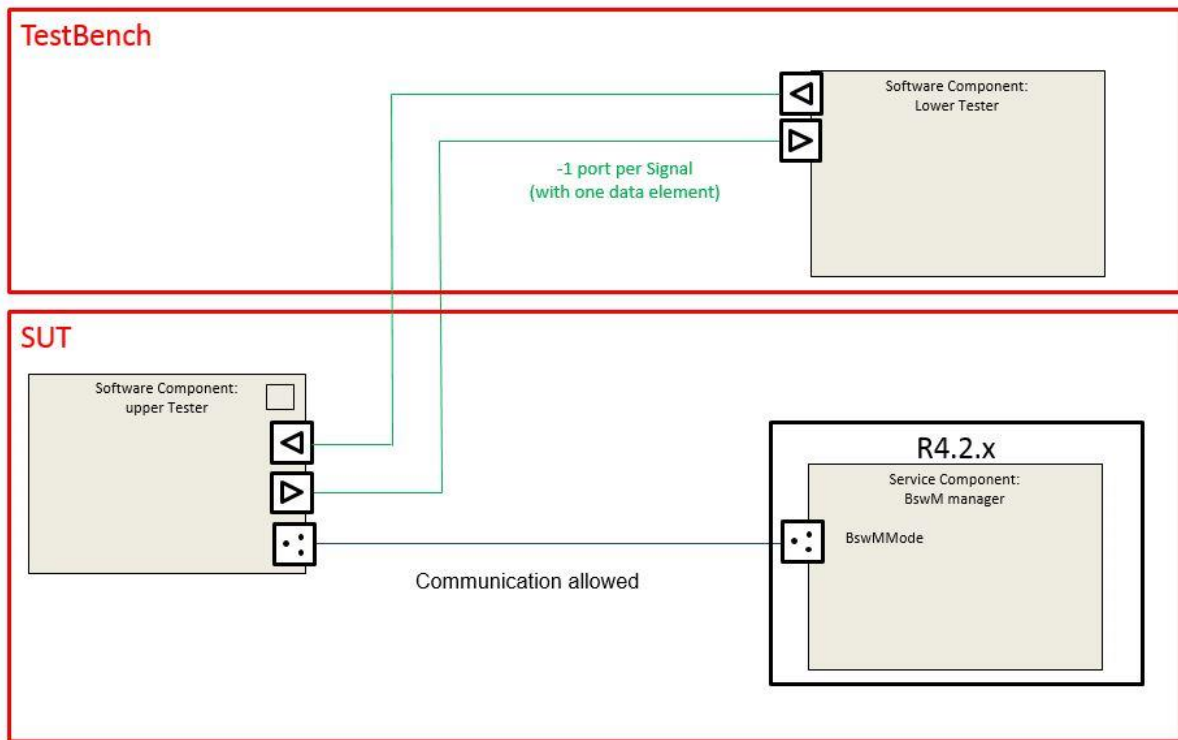

#### **7.1.1.3 Test Coordination Requirements**

Not Applicable.

### **7.1.2 Test Configuration**

This section describes sets of requirements on configuration. These sets are later referenced by test cases. No configuration files are provided, they need to be developed when the test suite is implemented.

#### **7.1.2.1 Required ECU Extract of System Description Files**

**Fig J: Required SWC description**

From Software Component point of view, for each test case, the communication interfaces are defined as follows:

Port name	Data element type	Data element	Mapping	Type
<TestCaseName>_<signalname>	UINT8_N	<signalname>	<signalname>	signal
<TestCaseName>_<signalname>	UINT8_DYN	<signalname>	<signalname>	signal

**Table 7: SWC Interfaces used**

Therefore ports and signals names change according to Test Case number, but the building rule is the same.

For API calls Rte\_Write(), Rte\_Send(), Rte\_Read(), Rte\_Receive(), Rte\_Feedback() Refer [\[2\]](#) of Section 2.1 Input Documents.

For API calls Rte\_LdComCbKtpRxIndication, Rte\_LdComCbKtpTxConfirmation, Rte\_LdComRxIndication, Rte\_LdComCbKtpTxConfirmation Refer [\[1\]](#) of Section 2.1 Input Documents.

**7.1.2.1.1 Use case 03.02: Data Transfer of Array Signal of size more than <BUS> Capability**

The communication database is depicted below:

IPdu	Signal	Tx ECU	Rx ECU
AT_1483_IPdu	AT_1483_Sg1	SUT	TestBench
AT_1484_IPdu	AT_1484_Sg1	TestBench	SUT

**Table 8: Communication Database**

### 7.1.2.1.2 Use case 03.03: Data Transfer of Dynamic Array size Signals

The communication database is depicted below:

IPdu	Signal	Tx ECU	Rx ECU
AT_1479_IPdu	AT_1479_Sg1	SUT	TestBench
AT_1480_IPdu	AT_1480_Sg1	SUT	TestBench
AT_1481_IPdu	AT_1481_Sg1	TestBench	SUT
AT_1482_IPdu	AT_1482_Sg1	TestBench	SUT

**Table 9: Communication Database**

### 7.1.2.2 Required ECU Configuration Description Files

No specific configuration requirements for ECU Configuration files, as they can be derived from EcuExtract.

### 7.1.2.3 Required Software Component Description Files

No specific configuration requirements for Software Components.

### 7.1.2.4 Mandatory vs. Customizable Parts

Mandatory parameters are:

- ISignalToIPduMapping.startPosition => 0
- ISignalToIPduMapping.packingByteOrder =>Opaque
- ISignalToIPduMapping.transferProperty =>triggered/  
triggeredWithoutRepetition  
See 7.3 Test Cases for further details.

Customizable parameters are (these values are test case independent):

- CANframes identifiers

### 7.1.3 Test Case Design

Not Applicable.

## 7.2 Re-usable Test Steps

Not Applicable.

## 7.3 Test Cases

### 7.3.1 [ATS\_COMCAN\_01479] LdCom Transmission using CanTp API for Dynamic Array Size with in Single Frame (<64 bytes for CAN-FD) and Notification for PDU transfer

<b>Test Objective</b>	LdCom Transmission using CanTp API for Dynamic Array Size with in Single Frame (<64 bytes for CAN-FD) and Notification for PDU transfer		
<b>ID</b>	ATS_COMCAN_01479	<b>AUTOSAR Releases</b>	4.2.1 4.2.2
<b>Affected Modules</b>	LdCom, PduR, CanTp, CanIf, Can	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00121 ATR: ATR_ATR_00127		
<b>Trace to SWS Item</b>	LargeDataCOM: SWS_LDCOM_00012 LargeDataCOM: SWS_LDCOM_00013		
<b>Requirements / Reference to Test Environment</b>	Use Case UC03.03		
<b>Configuration Parameters</b>	<p>LdComIPdu(SignalIPdu): AT_1479_IPdu(normal I-PDU)          -ISignal.length(for CAN 2.0) = 6(&lt; 8 bytes)          -ISignal.length(for CAN-FD) = 60(&lt; 64 bytes)          -LdComApiType = LDCOM_TP          -LdComIPduDirection(CommConnectorPort.communicationDirection) = LDCOM_SEND          -LdComTxCopyTxData = Rte_LdComCbkJCopyTxData_Sg1          -LdComTxConfirmation = Rte_LdComCbkJTpTxConfirmation_Sg1</p> <p>LdComSignal(ISignalToPduMapping): Sg1          -dataElement with queued swImplPolicy          -DataSendCompletedEvent mapped on TxConfirmation          -SystemSignal.dynamicLength = true</p>		
<b>Summary</b>	To check the LdCom transmission through CanTp for Single frame of dynamic array data type. Signal length shall be configured to a value less than 64 bytes for a CAN-FD frame or to a value less than 8 bytes for CAN 2.0 frame. As this is an indirect testing for LdCom transmission confirmation, notification is given to the software component of Upper Tester about transmission of the signal.		
<b>Needed Adaptation to other Releases</b>	n/a		
<b>Pre-conditions</b>	Com stack is initialized		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[SWC]  Trigger Rte_Send() for dynamic Signal AT_1479_Sg1 with signal length 6 bytes (This will initiate TP transmission).	[SWC]  Rte_Send() shall return RTE_E_OK.	
<b>Step 2</b>	[LT<CAN>]  Monitor and validate the frame on bus.	[LT<CAN>]  Frame shall be observed with data	

		transmitted by SUT.
<b>Step 3</b>	-	[SWC]  Rte_LdComCbkJpTxConfirmation API shall be invoked for the signal. DataSendCompleted event is activated.
<b>Post-conditions</b>	None	

### 7.3.2 [ATS\_COMCAN\_01480] LdCom Transmission using CanTp API for Dynamic Array Size with Multiple PDU (>64 bytes for CAN-FD) and Notification for PDU transfer

<b>Test Objective</b>	LdCom Transmission using CanTp API for Dynamic Array Size with Multiple PDU (>64 bytes for CAN-FD) and Notification for PDU transfer		
<b>ID</b>	ATS_COMCAN_01480	<b>AUTOSAR Releases</b>	4.2.1 4.2.2
<b>Affected Modules</b>	LdCom, PduR, CanTp, CanIf, Can	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00121 ATR: ATR_ATR_00127		
<b>Trace to SWS Item</b>	LargeDataCOM: SWS_LDCOM_00012 LargeDataCOM: SWS_LDCOM_00013		
<b>Requirements / Reference to Test Environment</b>	Use Case UC03.03		
<b>Configuration Parameters</b>	LdComIPdu(SignalIPdu): AT_1480_IPdu(large I-PDU) -I-Signal.length(for CAN 2.0) = 30(>= 8 bytes) -I-Signal.length(for CAN-FD) = 100(>= 64 bytes) -LdComApiType = LDCOM_TP -LdComIPduDirection(CommConnectorPort.communicationDirection) = LDCOM_SEND -LdComTxCopyTxData = Rte_LdComCbkJpCopyTxData_Sg1 -LdComTxConfirmation = Rte_LdComCbkJpTxConfirmation_Sg1  LdComSignal(ISignalToPduMapping): Sg1 -SystemSignal.dynamicLength = true -dataElement with queued swImplPolicy -DataSendCompletedEvent mapped on TxConfirmation		
<b>Summary</b>	-To check LdCom transmission for multiple Pdu through CanTP for a signal of type dynamic array. Signal length needs to be configured to a value greater than or equal to 64 bytes for a CAN-FD frame and to a value greater than or equal to 8 bytes for CAN 2.0 frame. As this is an indirect testing for transmission confirmation, notification will be given to software component of Upper Tester about transmission of the signal.		
<b>Needed Adaptation to other Releases</b>	n/a		
<b>Pre-conditions</b>	Com stack is initialized.		
<b>Main Test Execution</b>			

Test Steps		Pass Criteria
Step 1	[SWC]  Trigger Rte_Send() for a dynamic signal AT_1480_Sg1 with signal length 30 bytes.	[SWC]  Rte_Send() shall return RTE_E_OK.
Step 2	[SWC]  First frame is observed on the bus. Wait for Flow Control frame with Flow Status ClearToSend.	[SWC]  Flow Control with Flow Status ClearToSend is received.
Step 3	[SWC]  Consecutive frames are sent by SWC until all the data has been transmitted on reception of Flow Control frame.	[LT<CAN>]  Consecutive frames are received with data transmitted by SUT.
Step 4	-	[SWC]  Rte_LdComCbKtpTxConfirmation API is invoked for the signal and DataSendCompleted event is activated for the same..
Post-conditions	None	

### 7.3.3 [ATS\_COMCAN\_01481] LdCom Reception using CanTp API for Dynamic Array Size with in Single Frame (<64 bytes for CAN-FD)

Test Objective	LdCom Reception using CanTp API for Dynamic Array Size with in Single Frame (<64 bytes for CAN-FD)		
ID	ATS_COMCAN_01481	AUTOSAR Releases	4.2.1 4.2.2
Affected Modules	LdCom, PduR, CanTp, CanIf, Can	State	reviewed
Trace to Requirement on Acceptance Test Document	ATR: ATR_ATR_00121 ATR: ATR_ATR_00127		
Trace to SWS Item	LargeDataCOM: SWS_LDCOM_00014 LargeDataCOM: SWS_LDCOM_00015 LargeDataCOM: SWS_LDCOM_00016		
Requirements / Reference to Test Environment	Use Case UC03.03		
Configuration Parameters	LdComIPdu(SignalIPdu): AT_1481_IPdu(normal I-PDU) -ISignal.length(for CAN 2.0) = 6(< 8 bytes) -ISignal.length(for CAN-FD) = 60(< 64 bytes) -LdComApiType = LDCOM_TP -LdComIPduDirection(CommConnectorPort.communicationDirection) = LDCOM_RECEIVE -LdComRxIndication = Rte_LdComCbKtpRxIndication_Sg1 -LdComRxStartOfReception = Rte_LdComCbKStartOfReception_Sg1		

	-LdComRxCopyRxData = Rte_LdComCbkJCopyRxData_Sg1 LdComSignal(ISignalToPduMapping): Sg1 -SystemSignal.dynamicLength = true -dataElement with queued swImplPolicy -DataReceivedEvent mapped on RxIndication	
<b>Summary</b>	- To check that application can receive LdCom data through TP for a dynamic signal of length less than 8 bytes in case of CAN 2.0 frame or of length lesser than 64 bytes in case of CAN-FD frame.	
<b>Needed Adaptation to other Releases</b>	n/a	
<b>Pre-conditions</b>	Com stack is initialized.	
<b>Main Test Execution</b>		
	<b>Test Steps</b>	<b>Pass Criteria</b>
<b>Step 1</b>	[LT<CAN>]  Send the dynamic signal AT_1481_Sg1 with value AT_1481_Sg1_Value_1 and signal length 6 bytes.	[SWC]  Rte_LdComCbkJTpRxIndication API for the signal is invoked. DataReceivedEvent is activated.
<b>Step 2</b>	[SWC]  Call Rte_Receive() for AT_1481_Sg1.	[SWC]  Return value of Rte_Receive() is RTE_E_OK  AT_1481_Sg1_value is AT_1481_Sg1_Value_1.
<b>Post-conditions</b>	NONE	

### 7.3.4 [ATS\_COMCAN\_01482] LdCom Reception using CanTp API for Dynamic Array Size with Multiple PDU (>64 bytes for CAN-FD)

<b>Test Objective</b>	LdCom Reception using CanTp API for Dynamic Array Size with Multiple PDU (>64 bytes for CAN-FD)		
<b>ID</b>	ATS_COMCAN_01482	<b>AUTOSAR Releases</b>	4.2.1 4.2.2
<b>Affected Modules</b>	LdCom, PduR, CanTp, CanIf, Can	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00121 ATR: ATR_ATR_00127		
<b>Trace to SWS Item</b>	LargeDataCOM: SWS_LDCOM_00015 LargeDataCOM: SWS_LDCOM_00016 LargeDataCOM: SWS_LDCOM_00017		
<b>Requirements / Reference to Test Environment</b>	Use Case UC03.03		
<b>Configuration Parameters</b>	LdComIPdu(SignalIPdu): AT_1482_IPdu(large I-PDU) -ISignal.length(for CAN 2.0) = 30(>= 8 bytes) -ISignal.length(for CAN-FD) = 100(>= 64 bytes)		

	-LdComApiType = LDCOM_TP -LdComIPduDirection(CommConnectorPort.communicationDirection) = LDCOM_RECEIVE -LdComRxIndication = Rte_LdComCbkJpRxIndication_Sg1 -LdComRxStartOfReception = Rte_LdComCbkJpStartOfReception_Sg1 -LdComRxCopyRxData = Rte_LdComCbkJpCopyRxData_Sg1  LdComSignal(ISignalToPduMapping): Sg1 -SystemSignal.dynamicLength = true -dataElement with queued swImpPolicy -DataReceivedEvent mapped on RxIndication		
<b>Summary</b>	-To check that application can receive LdCom data through CanTP for a dynamic signal of length greater than or equal to 8 bytes for CAN 2.0 frame and length greater than or equal to 64 bytes for CAN-FD.		
<b>Needed Adaptation to other Releases</b>	n/a		
<b>Pre-conditions</b>	Com stack is initialized.		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[LT<CAN>]  Send the frame with dynamic signal AT_1482_Sg1 with value AT_1482_Sg1_Value_1 and signal length 30 bytes.	[SWC]  First frame is observed on the bus with Frame length 8 bytes and FF_DL 30 bytes. Flow Control with Flow Status ClearToSend is sent.	
<b>Step 2</b>	[LT<CAN>]  Consecutive frames are sent by LT until all the data has been transmitted on reception of Flow Control frame.	[SWC]  DataReceivedEvent is activated on successful reception of all Consecutive frames.	
<b>Step 3</b>	[SWC]  Call Rte_Receive() to read AT_1482_Sg1.	[SWC]  Rte_Receive() returns RTE_E_OK.  AT_1482_Sg1_value is AT_1482_Sg1_Value_1.	
<b>Post-conditions</b>	NONE		

### 7.3.5 [ATS\_COMCAN\_01483] LdCom Behavior in case of CanTp communication failures during multiple PDU Transmission

<b>Test Objective</b>	LdCom Behavior in case of CanTp communication failures during multiple PDU Transmission		
<b>ID</b>	ATS_COMCAN_01483	<b>AUTOSAR Releases</b>	4.2.1 4.2.2
<b>Affected Modules</b>	RTE, LdCom	<b>State</b>	reviewed
<b>Trace to Requirement</b>	ATR: ATR_ATR_00127 ATR: ATR_ATR_00128		

<b>on Acceptance Test Document</b>		
<b>Trace to SWS Item</b>	RTE: SWS_Rte_01380	
<b>Requirements / Reference to Test Environment</b>	Use Case UC03.02	
<b>Configuration Parameters</b>	<p>LdComIPdu(SignalIPdu): AT_1483_IPdu(large I-PDU)          -LdComApiType = LDCOM_TP          -LdComIPduDirection(CommConnectorPort.communicationDirection) = LDCOM_SEND          -LdComTxCopyTxData = Rte_LdComCbkJCopyTxData_Sg1          -LdComTxConfirmation = Rte_LdComCbkJTpTxConfirmation_Sg1</p> <p>LdComSignal(ISignalToPduMapping): Sg1          -ISignal.length &gt; Size of &lt;BUS&gt; capability</p>	
<b>Summary</b>	<p>- LdCom shall return an appropriate error result to RTE on CanTp transmission failure.</p> <p>Note: Errors may occur due to Overflow, N_Bs timeout, N_As Timeout, N-Cs timeout and so on.</p> <p>A Rte_Feedback call to RTE shall return transmission failure status to Application.</p>	
<b>Needed Adaptation to other Releases</b>	n/a	
<b>Pre-conditions</b>	Com stack is initialized.	
<b>Main Test Execution</b>		
<b>Test Steps</b>	<b>Pass Criteria</b>	
<b>Step 1</b>	<p>[SWC]</p> <p>Trigger Rte_Write() for signal AT_1483_Sg1 with signal length greater than single frame (This initiates TP transmission).</p>	<p>[SWC]</p> <p>Rte_Write() shall return RTE_E_OK.</p>
<b>Step 2</b>	<p>[LT&lt;CAN&gt;]</p> <p>Monitor and validate the frame on bus.</p>	<p>[LT&lt;CAN&gt;]</p> <p>Frames shall be observed with value on bus by SUT.</p>
<b>Step 3</b>	<p>[SWC]</p> <p>TP transmission is terminated because of an error.</p> <p>Note: Errors are listed in the Summary of this TestCase.</p>	<p>[SWC]</p> <p>Rte_LdComCbkJTpTxConfirmation API for the signal is invoked with result E_NOT_OK.</p>
<b>Step 4</b>	<p>[SWC]</p> <p>Call Rte_Feedback() for AT_1483_Sg1.</p>	<p>[SWC]</p> <p>Rte_Feedback() shall return RTE_E_NO_DATA.</p>
<b>Post-conditions</b>	None	

### 7.3.6 [ATS\_COMCAN\_01484] LdCom Behavior in case of CanTp communication failure during multiple PDU Reception

<b>Test Objective</b>	LdCom Behavior in case of CanTp communication failure during multiple PDU Reception		
<b>ID</b>	ATS_COMCAN_01484	<b>AUTOSAR Releases</b>	4.2.1 4.2.2
<b>Affected Modules</b>	RTE, LdCom	<b>State</b>	reviewed
<b>Trace to Requirement on Acceptance Test Document</b>	ATR: ATR_ATR_00127 ATR: ATR_ATR_00128		
<b>Trace to SWS Item</b>	RTE: SWS_Rte_01387 RTE: SWS_Rte_01388		
<b>Requirements / Reference to Test Environment</b>	Use Case UC03.02		
<b>Configuration Parameters</b>	LdComIPdu(SignalIPdu): AT_1484_IPdu(large I-PDU) -LdComApiType = LDCOM_TP -LdComIPduDirection(CommConnectorPort.communicationDirection) = LDCOM_RECEIVE -LdComRxIndication = Rte_LdComCbkJpRxIndication_Sg1 -LdComRxStartOfReception = Rte_LdComCbkJpStartOfReception_Sg1 -LdComRxCopyRxData = Rte_LdComCbkJpCopyRxData_Sg1  LdComSignal(ISignalToPduMapping): Sg1 -SignalLength(baseTypeSize) > Size of <BUS> capability		
<b>Summary</b>	- LdCom shall return appropriate error result to RTE when CanTp reception fails during Multi PDU reception.  Note: Error may occur due to Buffer unavailability, N_Ar timeout, N_Cr timeout and so on.  Reception Failure is notified to Application on read request.		
<b>Needed Adaptation to other Releases</b>	n/a		
<b>Pre-conditions</b>	Com stack is initialized		
<b>Main Test Execution</b>			
<b>Test Steps</b>		<b>Pass Criteria</b>	
<b>Step 1</b>	[LT<CAN>]  Send the signal AT_1484_Sg1 of length greater than single frame.	[LT<CAN>]  Frames is observed on the bus with Frame length 8 bytes and FF_DL greater than single frame length.	
<b>Step 2</b>	[SWC]  TP reception fails because of an error.  Note: Errors are listed in the Summary of this TestCase.	[SWC]  Rte_LdComCbkJpRxIndication API for the signal with E_NOT_OK.	
<b>Step 3</b>	[SWC]	[SWC]	

	Call Rte_Read() for AT_1484_Sg1.	AT_1484_Sg1 Signal value is set to invalid value.
<b>Post-conditions</b>	NONE
